Well, let us see. Marijuana? De minimus. This is one of the better arguments for my premise. While we are at it, lower the drinking age to 18 or possibly 16. Outlawing a weed is a classic way for a government to look like buffoons. Out here where it was planted by Sam for naval rope in two wars the biggest social hazard it presents is people drying it in a pillow case and setting fire to the lint trap down at the local laundromat.

My observation about traffic laws came from a Federal agency who contend that speed limits in urban areas are too low. In British Columbia, all autos are insured by the Insurance Company of British Columbia. IBC does some interesting things not the least of which is to become a royal pain in the butt to traffic engineers; State Farm's 10 Worst Intersections came from IBC. Their contention is that putting the left turn signal on the far left post would cut red lite violations by about 40% because people could see the damned thing behind a Ford Exhibitionist.

Very few states tax personal property (except cars in some) because it turned everyone into an outlaw. When was the last time you paid a use tax on things you bought out of state?

So yes, I believe we might have learned by now that outlawing natural behaviors is rather pointless. I lived in Wisconsin for 18 years; that is a state that knows how to drink. Get into a bar fight and you will do 30 days; drive under the influence and you will be down for 45 days and occupational only for 45 more plus the hassle of your life and there is zilch the judge can do for you. The third time your car is sold. There are limits to the ability of the legal system to accomplish social ends but they make a hell of a stab at it. Wisconsin played UNLV some years ago and the Badger fans emptied the beer supply by halftime but no one got out of hand.

Even made the LV paper.

As far as getting them into ham radio, first off I ain't recruiting, and second the FCC has already trod that road opening 28.3-28.5 to anyone who can pass a code test. Most new hams are lids to some extent; one of my contemporaries once broke into a conversation with Barry Goldwater and was amazed that they all stopped so he could declare his emergency. He survived to tell the story on himself. Life moves on.

The Codeless Tech ticket itself became available because of any number of shenanigans pulled off by Extras to allow our wives to get bread and milk during the long commute home. I know! On the repeater the club of which I was president ran, all the wives were named Sally and used the same call sign, an old one of mine. No one gave rat tits and the Voobies of the world never noted that Sally had a lot of colds. Rules are meant to be tactfully disregarded -- the key word is tactfully.

I object to symbolism and idolatry. Setting up Part 95 (or Part 97 for that matter) to be bronzed and worshiped is not my idea of fun. This does not mean I condone or support amps and freebanding; quite the opposite. But when it is as widespread, blatant, and common as it is there is a pretty good suspicion that we have an engineering problem not an enforcement problem.

While technology has much surpassed the old days of homing in on a signal,
you don't think there would be a good reason to stop transmitting under
threat of air attack/ There's more to it than just the "right" to transmit.
I don't know
about you, but I would be heading towards a certain underground place I know
near here instead of sitting around talking on a radio. Not to be
disagreeable, but the question was kinda "loaded" and you fell for it.
Again, IF we were told
that we were about to be attacked, are you saying you would be sitting at
home
talking on your radio instead of heading for cover? Hehe, not me--I'd be
gittin'
the hell outta Dodge.

Dick, I'm a General... But that's beside the point.. I kept it for this one, but I will change it when I get my extra.. I'm going to check the "change my callsign systematically" box, and hope for the best. If I don't like the one issued, I'm going to apply for a vanity. The vanity will be a 2x2, and I have three choices picked out already.

That's not true, Packrat... You have to specifically request for it to be changed, otherwise it stays the same. I did not ask for it to be changed, I did nothing except take the test. I checked no other boxes on the forms.

We already have limited speach, and that has been true for a long time.
It partly depends on where you are when you wish to speak, and sometimes
what you want to say. What you can print in newspapers is also somewhat
restricted.

There is nothing in the Constitution or Bill of Rights that guarantees us
the right to travel freely. Maybe there should be, but there isn't.

Nor is there anything in either of those documents that guarantee us the
right to talk on the radio - just as there is nothing that guarantees the
right to drive motor vehicles.

> Osama, a man born into great wealth who has forgone it all and lives in poverty using his wealth to fight for justice... Who among us would piss away $300 million...

Rather than using his Saudi oil $millions to feed the hordes of starving Afghanis, he has chosen to plow his money into recruiting and training an army of terrorists and acquiring weapons of destruction. He is neither noble nor altruistic. He is a madman--impelled by unreasoned hatred and a thirst for violence--who lusts only for power.

The notion of his "fight for justice" is ludicrous. He has never been elected to anything, and in areas where the Taliban have seized control, they have brutally murdered any of their countrymen who opposed their rule. The lifestyle they impose on their victims prohibits girls from going to school and women from working or receiving medical care. They have created many widows throughout Afghanistan, who must resort to begging to support themselves and their children.

> What Osama spoke of, the reason for this war is something the entire world is aware of. The Israelis are committing genocide in Palestine, a land in which the Jews do not belong...

His hatred for Israel and professed concern for the plight of the Palestinians are transparent rationalizations for his anti-western venom. He referred to a period of "80 years" of foreign oppression: so his hatred for the U.S. pre-dates the state of Israel by some 50 years. Most Afghanis are more impoverished and deprived than most Palestinians. Finally, regarding what you call his "reasoned" presentation: if you are a Christian, you too are among the "infidels", to whom he referred frequently and pledges to eliminate.

news:Bkvx7.16209$Gd6.354673@typhoon.mw.mediaone.net...

^ Were are replacing analog TV with digital here as well but the process is
^ really draging out due to the high cost of the equiment.
--

There is still no cable service where I live. I hear that one cable company
have decided to stop expanding the ISP service (totally free to their
telephone customers), and concentrate on moving their cable service into
other parts of the country.
But I am not holding my breath, as it is a long job.

--
^ That does seem ironic since here there is a fast growing demand for all
^ sorts of wireless services. This will only make interference more common
^ but any yo-yo that wants to ignore the licensed frequencies for the service
^ they use, by transmitting on non licensed frequencies will sooner or later
^ discover the increasing attention to enforcement actions. It's the only way
^ that all wireless services can get along. For example the FCC here has been
^ cracking down on pirate FM radio stations across the country.
--

We will have to see if the demand for radio reduces as cable services spread.
At the moment, satelite seems to be the best method for total coverage of a
large area. Once whole countries have cables down, this may change.
One of our free satelite services gives info about the systems used... it
takes YEARS to build a single satelite, which weighs several TONS, and has to
be launched into space with rockets. Once it is there, it must operate
totally fault free for it's expected life (I think 10 years). Once the cable
system is in, the running costs must be lower than satelite.

In the UK, "Pirate" station operation carries a much higher fine than illegal
CB. I am not sure how the law defines the difference, but I have never heard
of a CBer getting the "pirate" fines, even when using non-CB frequencies.

A few years back, I saw a TV program about the "Pirate" stations in London.
They are using microwave links to avoid being tracked. If the transmission is
tracked, all they find is the main transmitter, and the microwave rx.
This is not just out of fear for the law... the RA is the least of their
worries. If they are found, the RA could take all their equipment (including
music equipment and CDs etc)... But if their rival "Pirates" find them, they
will destroy all their equipment, and possibly their chance of them ever
walking (or breathing) again.
They say that there is big money involved. Not only from obvious advertising,
but also from being paid to give certain records plenty of "airtime" so their

sales increase.

Regards,

Brainbuster.

I am looking for a manual or any documentation for a Realistic/Radio Shack TRC-124 CB. I would also like a 5 pin-din microphone for it, as well. If you have anything, please E-Mail me the information.

I also know some Amateurs who know very little of the technical side. Some of these are still learning, but that is the point of amateur. There are others who do not want to go further, either they think getting the licence means that know it all, or they just wanted an idiot free CB system.
Just because some people want to use Amateur as an "idiot free CB", it doesn't mean that is the correct use.

> Licenses are designed to do 2 basic things. Regulate usage, and keep out
> the "Riff-Raff".

But this doesn't explain why there are separate "Amateur" and CB services. Licence systems are also used purely to get money, like the TV licence or the British CB licence. The only requirement for these is that you pay the fee.

> If I you want to learn about RF electronics, you can take a class
> or read a book. I didnt know you need a license to do that. A good
> tech can build a legal CB from scratch as well as a 2 meter radio.

You don't need a licence to learn theory, but if you want to try the practical side or radio, then you may need some kind of licence. You can self build certain parts of a CB system such as the antenna, but not the actual transceiver.

Of course there is also the professional route to radio and electronics, you don't have to do it just as a hobby. In the UK there is also a T & D licence

for manufacturers etc, I expect the US will have an equivalent.

Quite true, ISP rules are regularly being broken by some who complain about others having no respect for rules.
Some newsgroups may be moderated, every post is read before being places on the newsgroup.

There is little fear of ISP rules, as when people get booted by their ISP, they just get another account. In the UK, some ISPs now use caller identification (sent whenever you make a call). If you withold your ID, then they withold their services. This effectively allows them to block known offenders from simply getting another account with another false name.
If internet abuse continues, this practice may spread to most (if not all) ISPs.
The problem is that some companies sell on the info they have about their customers, and this can include name, address, telephone number, and all sorts of personal details.

Regards,

Brainbuster.

This should make it "crystal."

http://www.popularwireless.com/gmrsad.html
(Too long to post in it's entirety.)

I especially like the part where it reads:

"We invoice monthly and expect Net 30. GMRS Web reserves the right to refuse service to anyone without explanation. Banner ads should be related in some way to the two-way radio or personal communications industry and preferably to products and services targeted at families and consumers. No adult oriented ads or ads encouraging illegal activity are permitted (including ads for export CB radios that are really intended to promote the illegal CB radio market in this country.) Communications companies that specialize in selling illegal radio equipment in U.S. markets or in making illegal radio transmitter modifications should look elsewhere."

That's a good message, especially considering that it's from the very same guy that wrote:

"I bought my CB from Popular Wireless advertiser Bills 2 Way. A new Cobra 148 NW ST, AM and SSB CB radio for $169. More on the Cobra in a subsequent review."

I read the review, they were much too kind. The answer to your query, Aaron, is BOTH.

> >Oh, I do so love these click buttons. "Modification information,
> click
> >here." Gee, they seem to be next to every CB?! And look, a sale!
> (detail snipped)
> >Nothing against Bill's 2 Way, I've used and still own plenty of
> >"export" and converted 10-meter rigs. Yes, I've purchased equipment
> >from Bill too. Those days are over for me but I won't bash anybody

>
> Woah, hang on here. Granted, Doug published his opinions on his own
> web page. But are you saying that anyone who wants to express similar
> opinions (i.e. hard line anti-illegal CB) should not do it in
> rec.radio.cb or they will be considered "trolls"?

Depends on the tactics. I've said on the NG that transmitting on the "freeband" or using an illegal amplifier is illegal. How come I don't see numerous posters cursing me out or calling me names? Why doesn't anybody question the validity of the source of my statements? Why isn't there a "Bert's full of $hit list?" (You'll notice that I'm not a signatory of the present list.) I'd like to believe it's from respect, Aaron. Although some may not agree with what I have to say, many know it's said with the best of intentions for a band that we both love. Respect get's you heard and get's results. I get friendly e-mails and IM's from both camps (Those who agree with me as well as those who don't.) and I don't have to use a free web-based e-mail account. My ARRL redirection address dumps right into my CompuServe e-mailbox. Being a "troll" isn't so much what you say as "how" you say it.

> >But if he's going to take such a hardline stance and put it

> affect the content of his editorial? Do you disagree with his
> opinions? Do you think the issues he raises are less valid because of
> his Bills-2-Way endorsement?

Two word's come to mind, "damaged goods." While his points are technically valid, he seems to have gone a bit extreme with them. For example, let's look at this sentence from his "nickel's worth."

"These CB outlaws have also contributed to the RFI/TVI problems that have bloodied every other wireless hobby AND some have even had the nerve to petition the FCC seeking changes to CB FCC Rules that would make their illegal activities legal."

While the first half of this statement is absolutely correct, the second half (Starting from the word, AND.) sends the message that it's wrong to attempt to change a rule/law that's perceived as being unjust, using the proper protocol. I think Doug's had a bad experience and feels hurt and possibly wants to "lash out" at those who've hurt him, hence the extremely hardline editorial. The issues that he raises are not any less valid, but his credibility as it relates to said issues may now be viewed as suspect.

Nice to see someone spending their time in a constructive manner.
There are others here who should spend their time more wisely,
rather than build useless pages just to antagonize those who they
are jealous of, or disapprove of. Keep up the good work.
Mr. K

1450. DX Report (Freeband Fun)

Newsgroup: rec.radio.cb
Date: 2001-10-15 14:53:12 UTC
From: twistedhed@webtv.net
Message-ID: <4323-3BCAF858-118@storefull-124.iap.bryant.webtv.net>
Source record: 100358

The freeband frequencies between 25.000 and 27.995 yield some great DX.
Below is a minor sampling of what one can expect.

```

(Bert Craig)
Thanks Twist,
I think that oyster festival Bert mentioned is in about two weeks. Feel
like coming to NY? It's in a town called...get this, Oyster Bay. I'll
double check,
but I'm pretty sure it's weekend after next. Take care and 73. Mark
Mark,
-
I'll find out the exact date from Schmitty (Paul) at work. Twistedhed,
if you can make it up from FL, you're more than welcome to join us. The
invite's open to all, yes I mean ALL. It's a fun weekend, but I'll warn
you in advance that the weather will be much cooler in two weeks. The
town of Oyster Bay has also prohibited the sale of alcoholic beverages
for that weekend. (Restaurants excepted.)
73 de Bert
KC2HMN
-
  Thanks, Bert. Much as I would like to schmooze, I won't be getting
away for another several months. One of the dogs just had another litter
of pups and we need to hang around for awhile. I'll be getting some time
maybe in Dec or Jan for a week or 2 of R & R. Besides, from now through
Feb, it's absolute paradise down here. I am seeing a drop in tourists,
so the crowds aren't even here that we're used to each winter. Hunting
season is right around the corner, been running the dogs in the
evenings, and fishing on the weekend along with my share of skip
shootin'. I'll be in TN in the spring for another of those 3 day
work/play weekends, somewhere in the southern part. That's about as
north as I may get in the next year or so. I have a fraternity brother
on LI who I owe several visits to, so maybe NY can be worked in
somewhere next summer. I have a wedding in Maine I must attend, so a
trip to Lindy's for some cheesecake for dessert will top off the cold
water lobster just right."

Dick, perhaps we could do this for all the Marijuana laws, traffic laws, speedlimits, tax laws etc etc This would eliminate many lawbreakers in our society. Right Relax the rules. The problem Dick they break the rules as they are written now and are no better operators nor does it help get them into Ham radio anymore sooner, the only way the limit would help them get into ham is for them to want to do it legaly and to be a part of our law abiding society
-
Well, let us see. Marijuana? De minimus. This is one of the better arguments for my premise. While we are at it, lower the drinking age to 18 or possibly 16.

"Of course. Trust a man to serve and protect your country but deny him a drink. Never did make sense."

Outlawing a weed is a classic way for a government to look like buffoons. Out here where it was planted by Sam for naval rope in two wars the biggest social hazard it presents is people drying it in a pillow case and setting fire to the lint trap down at the local laundromat.

"Kentucky grew it, too. So did many of our early presidents. The Declaration was written on hemp parchment as well. Not just ropes, but sails, clothes, and many other items were made from it. It was stronger, lasted longer, and cheaper. Then the evil Dupont made duplicate, synthetic items, and were successful in getting the hemp outlawed under false pretenses to unfairly eliminate any competition. Many great books were written on this subject. Passing a law is way easier than repealing one."

My observation about traffic laws came from a Federal agency who contend that speed limits in urban areas are too low. In British Columbia, all autos are insured by the Insurance Company of British Columbia. IBC does some interesting things not the least of which is to become a royal pain in the butt to traffic engineers; State Farm's 10 Worst Intersections came from IBC. Their contention is that putting the left turn signal on the far left post would cut red lite violations by about 40% because people could see the damned thing behind a Ford Exhibitionist.
Very few states tax personal property (except cars in some) because it turned everyone into an outlaw. When was the last time you paid a use

tax on things you bought out of state?
So yes, I believe we might have learned by now that outlawing natural behaviors is rather pointless.

"Man has had an innate predisposition to temporarily alter his consciousness since the beginning of time, not only with physical substances. It is those who would legislate such morality laws as to say which avenue one may choose to attain said state which are dangerous."

I lived in Wisconsin for 18 years; that is a state that knows how to drink. Get into a bar fight and you will do 30 days; drive under the influence and you will be down for 45 days and occupational only for 45 more plus the hassle of your life and there is zilch the judge can do for you. The third time your car is sold. There are limits to the ability of the legal system to accomplish social ends but they make a hell of a stab at it. Wisconsin played UNLV some years ago and the Badger fans emptied the beer supply by halftime but no one got out of hand. Even made the LV paper.

"Excellent. Personal accountability is a first class model to serve."

As far as getting them into ham radio, first off I ain't recruiting, and second the FCC has already trod that road opening 28.3-28.5 to anyone who can pass a code test. Most new hams are lids to some extent; one of my contemporaries once broke into a conversation with Barry Goldwater and was amazed that they all stopped so he could declare his emergency. He survived to tell the story on himself. Life moves on.
The Codeless Tech ticket itself became available because of any number of shenanigans pulled off by Extras to allow our wives to get bread and milk during the long commute home. I know! On the repeater the club of which I was president ran, all the wives were named Sally and used the same call sign, an old one of mine. No one gave rat tits and the Voobies of the world never noted that Sally had a lot of colds. Rules are meant to be tactfully disregarded -- the key word is tactfully.
I object to symbolism and idolatry. Setting up Part 95 (or Part 97 for that matter) to be bronzed and worshiped is not my idea of fun. This does not mean I condone or support amps and freebanding; quite the opposite. But when it is as widespread, blatant, and common as it is there is a pretty good suspicion that we have an engineering problem not an enforcement problem.

"The rules are antiquated."

Dick NØBK

: Hello All: Need a little help here.

Hi again Jay,
Skipp up north checking in with you again.

: Did the Pride DX300 or Pride DX-1000, or any other type models have 2
: each 4CX250 or 4CX350 Tetrote Tubes.

It would probably be the DX-1000 model if one did. I have one of the
DX-300 units and it's about one of the best built single 4cx250 amplifiers
I've seen for that "class level" of amplifier.

: I am of the opinion one of the models had 2 of the Ceramic tubes,
: yes / no. Or was there a mod that installed the secong 4CX250 or
: 4CX350 tube?????
: Thanks for any help. Big discussion going on locally.
: Jay in the Mojave

It would be kind of nuts to install a second tube in the 300 version. The
power supply is about right for the single tube... the addition of a
second wouldn't be that great an idea.

There's a small bug in the DX-300 units... the tube heater has 6.3 volts
on it which is very bad news. Resistance wire or a plain proper value
resistor should be placed in the proper series lead to drop the tube
heater voltage down to 6.0 volts.
The lifespan of the tube is greatly reduced with the higher plate voltage.
Other than that, it's a great "Amateur Radio" amplifier. :-)

I probably should find a copy of the 1000 circuit diagram to pass my
opinion of how well done the circuit is.

chow for now

For backwoods emergencies, what do you think is most likely to be useful?

A cell phone? There are towers but not everywhere, and 800 mhz and a forest canopy may not be as good as 27mhz.

A CB walkie-talkie? 5 watts may reach out, but would anybody be listening?

2m ham transeiver?

Oh a satellite phone? are these big and expensive?

Smoke signals?

I think in Canada CBs were the cell phone of the woods, they may still be, and of course in 5 or 10 years there will be cell towers everywhere.

1461. antenna scraping overpasses

Newsgroup: rec.radio.cb
Date: 2001-10-15 19:01:47 UTC
From: Mike Bleiweiss <mbleiweiss@laurelholdings.com>
Message-ID: <tsmcts1fgqto07@corp.supernews.com>
Source record: 100368

Okay, I just installed a massive 1/4 wave antenna on my truck, and its highest point is over 14'6" tall. Performance is AWESOME, but the thing hits traffic lights and scrapes the undersides of any overpass I go under. The antenna is non-tuneable. SO, what I was wondering was - how much would it hinder my performance if I angled the antenna backwards about 20 degrees so it won't whack everything I drive under? Should I just leave it vertical?

LOL. You are very clever Bert. Train, Twisted, Mopar, and all the rest readily admit that transmitting on the "freeband" or using an illegal amplifier is illegal.

They do not curse you out or call you names because they know (from how you respond to various topics) that you are on their side.

> Why doesn't
> anybody question the validity of the source of my statements? Why
> isn't there a "Bert's full of $hit list?"

To be blunt, because you are FOR them, not against them, or even "neutral" like you say you are. They like you because you either leave them alone or come to their defense. Look what you did with the "CB Web" page. You have found a way to make the hardcore illegal CBers and outlaws feel good about themselves by inferring that the author is a hypocrite.

> (You'll notice that I'm not
> a signatory of the present list.) I'd like to believe it's from
> respect, Aaron.

Perhaps it's the "respect" you give the illegals. Sorry, but I believe they deserve none.

> second half (Starting from the word, AND.) sends the message that it's
> wrong to attempt to change a rule/law that's perceived as being
> unjust, using the proper protocol.

No reason you'd home-in on that is there? I mean, just because you are involved with a campaign that wants to change the 150 mile limit, you wouldn't pick that point out of his editorial to take issue with, would you?

The illegals gotta love you, Bert. Instead of your bumper sticker saying "I DX the Legal 40 -- and I vote" or "I DX CB -- and I vote" it says "I DX 11 meters -- and I vote". Very clever how it leaves the door open to freebanders (who else calls CB "eleven meters"???) and manages to be quite ambiguous at the same time.

This ambiguity, I'm finding out, is typical "Bert". Maybe you are not aware of how you manage to play both sides.

In any case I am sure you'll try and chide me and say I am dreaming the whole thing up, or I'm playing psychologist. You'd never try and psychoanalyse someone, wouldja Bert?

> I think Doug's had a bad experience
> and feels hurt and possibly wants to "lash out" at those who've hurt
> him, hence the extremely hardline editorial. The issues that he raises
> are not any less valid, but his credibility as it relates to said
> issues may now be viewed as suspect.

You know Bert, you come off as a 'nice guy' and a 'friend to all', but here you've character-asassinated a fellow who is, bottom line, trying to do some good for CB. And he's not even here to defend himself. I am seriously starting to think your nice-guy act is just a ruse.

Angle it back and see. If the SWR isn't affected much (that is to say,
if it's still under 2:1), then use it like that. It should be fine...

Well it does have to have some entertainment value otherwise no of us would be here. I do think Doug and Leland, Aaron, Sparky and a few others are or were Cbers, and got tired of what went on there so they got Ham licenses. I think they want to help straighten out the CB band. They have come back to there roots so to speak, since as everyone knows this is were every ham gets there start right, CB breeds the Finest Radio Op's, a little skip shooting here, a little freebanding there, couple a kw's here, a few roger beeps later Bingo .

Mike a sacrifice has to be made somewhere height is might, but you don't want it hitting trees, or you could bend it over a few degrees and loose a little signal. Or put a spring on it to lessen the effect of it hitting objects.

How far into the backwoods are you going? In terms of the forest canopy, 27 MHz will be absorbed much more quickly than would 800-900 MHz. Check the map for the cellular service to determine if it SHOULD be covered. Stellite phone is your best bet if you have deep pockets.

Hi everybody,

Can anybody tell me their impressions and/or opinions of the original AS Starduster 5/8 wave ground plane omni. I just grabbed one, still new in the box, for $60.00 as I know they're hard to come by. I've heard the Euro-copies are cheaply constructed. Thanks in advance for your input.

1484. Re: this newsgroup

Newsgroup: rec.radio.cb
Date: 2001-10-15 23:01:46 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <H9Ky7.163$n41.4187@e3500-atl2.usenetserver.com>
Source record: 100447

Can't happen. While that would be nice to have all that spectrum, there is one
problem: FCC doesn't govern all the spectrum within the USA, and a bunch of
that area so longingly coveted is covered by another agency. It is called the
National Telecommunications and Information Agency which is even more
powerful than FCC when it comes to spectrum allocation. This agency even
tells FCC what to do. That area, at least a bunch of it, is controlled by NTIA
where there are US government assignments such as Federal, military,
environ-mental, and forestry agencies. Particularly, that area just below
Channel 1 holds Army, Navy, Coast Guard and USAF frequencies that, while not
in use
on an hourly basis, ARE used for certain tactical operations. The real truth is,
there just isn't much HF spectrum that ISN'T occupied these days. Oh, I
know, folks think these frequencies aren't being used, but once assigned, it
is the perogative of the assigned agency to use it or not--it is there for
their convenience when it is needed. Bottom line is, if you tread on their
turf and
get popped, it YOU, not them, that will pay the piper.

Yet another problem is international treaties where countries agree to abide by
mutually decided uses for HF frequencies that can have an adverse affect on the
operations of each country's own domestic radio operations. There is a long
standing agreement between nations that for radio operators to have access to
HF, they must demonstrate a certain level of Morse Code proficiency. That
may, or may not, go away in the next few years. When CB was first proposed
in the 50s, FCC had to approach the thing from a VERY low power angle to
still be able to abide by the treaty, and, indeed, convince the member nations
that such operations by average citizens would not cause a problem and obtain
an exemption from the code thing.

Now one of the things the ITU will be discussing, according to various news
sources, is the interference caused by CB operators, not only in the US, but
worldwide, and how to put pressure on world governments to crack down on
outlaw operations. One of those governments is Mexico where we know that
we hear much Spanish both on 10 and 11 meters. People have been com-
plaining for awhile now--people that don't even know we on the newsgroup
exist. Getting additional spectrum is most unlikely in light of the

impressions that
people are getting from the freebanders and amp users. I didn't make this
up, so shout at the people that are doing the complaining to ITU and NTIA
and FCC. LOL! Things move slowly since the regulatory agencies' attentions
have
been elsewhere for so long (their fault), but, from what I see and hear,
things ARE slowly cranking up and those who tread on "outband" territories
may look
down to find a "serpent" underneath!

5/8 Starduster? How long was it? 21' ? !

The European (Italian) ones were BETTER--strengthened @ the base where they
go bad. I may have some left, and a Finco version too!
Dave!!!!!!!!!!!!!!!

Hello One37: Heah good deal.

Is it a modified Pride or Palmar, or the Technical Material Corp Amplifier, or is it the one with the chrome handles with the two bitchening 3 inch round meters, with a external power supply, and fan in a box? And how many American dollars????? I just sold the old 64 Lincoln so I have a few hundred at the ready.

Miss Dinah, yes she is that old, one day your best friend the next she's all wrapped arond the axle for some reason!?!?!?!? Last time I gased up, she says "Just your money please, I don't need to hear no other talkin" I just paid the gasoline bill and left. She will want to talk your fool head off next time!

Let me know on the amp, got Buck$ will travel.

"...we will not tire, we will not faulter, and we WILL NOT FAIL!"
(President George W. Bush)

I like that, Big Ten-4

The satellite phone is the best choice. They are not as big as they
were a few years ago (no dish required), but they are still kind of
expensive. But considering that no other form of comm is as reliable
in remote locations, it's a bargain to someone suffering from an
inflamed appendix (ask me how I know). The sat-phone is the only option
that will work almost all the time and from almost anywhere on the
globe, and will get you the contact you want in the shortest amount
of time.

One of the great unknown periods in our history was 1918-21 when we were off fighting Reds (yes Virginia we had troops in the Soviet Union) the railroads were run by the Army and the bloomin' Naivee ran radio. President Wilson was a zombie after a stroke and we still had such wonderment as the Sedition Act that made criticism of politicians punishable. The ACLU dates from this period.

As far as hemp, this was mostly a way to get rid of Mexicans. The fit hit the shan when Cab Calloway sang Marijuana. That there may well have been some financial backing from moneyed interests (Rockefeller usually gets the blame) is certainly possible. But one is generally better off not assuming a conspiracy when simple stupidity will serve.

Sorry Train, perhaps you don't understand antennas and I can understand that, It is a simple ground plane antenna the total length of the Starduster is 18 ft that may fool people like you into thinking it is a 1/2 wave antenna, the feed point is in the center of the antenna, there is a 9' +/- whip on the top and it has (3) drooping 9' radials which raise the feed point impedance for a better swr than if they were horizontal. I think my foot is now in your ass now get outta here.

M-400 STARDUSTER 7 db gain , 1000 watt , 18 foot tall aluminium
$54.95

Starduster (M400) 2 kw groundplane ,UPS reg 40.00

Well, no ground wave near 27MHz is going to take that big of an arc.
My uncle used to swear that a horizontal beam can keep the skip rolling
in forever. But after doing a bit of DF work locally, I realized that
a lot of the "skip talking" on 11m is really a bunch of local yahoos
with weak imaginations.

How 'backwoods'? Best bet is to check what is available (do rangers monitor CB?). Bear in mind that CB walkie talkies will NOT give you much distance. The antenna/ground system is EXCEEDINLY INEFFICIENT. Cell phones are not everywhere. As far as amateur - check where the repeaters are. My handheld with only a whip attached (yes, over 36 inches on 440 MHz) has reached repeaters in Buffalo, NY (60 miles away) and I've talked over a repeater over 100 miles away to the East; but this depends upon the repeater height and the fact that I can't be in a valley and reach them. In fact, to reach the furthest two repeaters, I've had to be on the 22nd floor of a high-rise on a hill. From flat ground, I can use the Auburn repeater (possibly 40 miles away). No problem with repeaters 30 miles away (and these get me into the telephone system) - but you'd have to check repeater locations. Same would apply to cell phones. They are not everywhere. Check the area out before you go in - that way you can select the best choice(s) available to you. Speaking of remote, from Antartica, they use direct satellite links for phones and internet; but these are NOT available 24 hours a day. For several hours, they have to depend upon HF amateur radio. That remains the only link that will work 24/7.

Sorry guys,

It's the M-400 and it's approx. 18ft. long, but fed at the midway point. I performed a search on the antenna and came up with both 1/2 wave and 5/8 wave references. I appreciate all your input.

The original A/S Starduster is considered a 1/2 wave antenna. The "radials" point at such an extreme angle down that they act more like the skirt of a coaxial dipole than a ground "plane". The little whiz-bang thing in the middle of the radiator probably helps match it by giving a little capacitance to ground, otherwise it would be higher than 50 ohm at resonance. The Shakespeare Big Stick is an example of a 1/2 wave coaxial dipole and it's 18' long.

So you confirm that Tim has been bootlegging on the freeband, and Ham bands using my callsign.

HEY TIM! Mopar just confirmed it, so that makes the E-mail you sent me a total lie.

Sounds a lot like the drug business. Funny how you don't hear the yahoos in this news group talk about that aspect of the pirate FM radio "hobby" when the subject comes up. They're totally convinced it "doesn't hurt anybody", but it does. Talk about being naive.

OK, Bert. Agreeing that the rules are antiquated, and agreeing that they need changing, what would you do?

While getting things thru the FCC and their assorted friends is not going to be easy, let us drop that part for the nonce. Let us also not sweat too much obsoleting a bunch of hardware. Let us not directly bitch about the cast of characters although they will need some classification. Start with a clean sheet of paper as they did in the mid-50s.

QUESTION 1: Just who are the cast of characters? Truckers because their choice of gear is limited by the growing electronics already on the tractor probably do need 27 MHz although there are better alternatives not the least of which is 220-222. Business users are gone to community repeaters, etc. RC is gone, even the junk usages are gone. Even temporary car comms are better done on MURS, FRS, GMRS, etc. You know better than I, who the hell is left on 27??

QUESTION 2: It is my oft-stated belief that any new system allowing AM is stupid. FM is far better mobile where SSB is certainly the way to go fixed. The RFI problem would nearly disappear if AM were outlawed. I am ready to outlaw it on the ham bands as well, at least 10 and 12 meters. Agree??? How about SSB with 30% carrier on 4 kHz splits with synchronous detection and digital modulation and leapfrog into the new world; hell, 2kHz splits DSB analog.

QUESTION 3: Just what is this new service supposed to accomplish? Not to be snide but what about the bowl, and the bozos with 500 channels??

What's the vision, man?

Bert, If you have a copy of the ARRL Antenna Book look up the word ground plane. You will see the reference antenna listed as a 1/4 wave ground plane with 1/4 wave ground radials. If your search would have went further you would reveal the truth. Don't let common CB Claims and misconceptions take the place of proven theory. It is a good performing antenna

Considered a half-wave by whom? drooping the radials to get a match is
about as old as coax.

I doubt the whiz bang did much of anything and proximity to ground or metal
objects in general lowers feed impedence so the 'extreme' angle makes sense
for the usual installation. It also prevents the direct radiation into your
neighbor's kitchen common with half-wave verticals.

FS: Yaesu FT-102
Bought it on Ebay (got burnt) and it appears to have the dreaded relay problem.
The RX drops low every now and then- tap it and it comes back good and strong.
Tubes do full output. Front is nice, a few minor scratches on cabinet. Small
plastic cover on edge of carrying handle has a small crack.
This one has the optional AM/FM unit and CW filter. $325 as-is.
Thanks!
Jim

Hopefully someone will know this.
Since at one time, there were only Ch 1-23. Then somewhere along the line the rest of todays channels were opened up.
Reading the articles about the dislike for freebanders and any attempts to open up the "freebands" are squashed, why was 24-40 opened up and how was it done.
I doubt the FCC was kind and just said here it is. Was a petition of somesort done or is it that Ham's were more tolerant in the 70's than they are today.

David

Jerry that is the crux of the problem, most of the illegal operators feel their operations are not bothering anybody because they have yet to hear about it. However by the time they do the damage is beyond the point where anybody wants to "negotiate" a solution. The second point is pirate activity is not confined strictly to HF, and thus the reason why Hams of all license classes have a stake in all of the "DC to Day Light" frequencies whether they use them or not.

On the AMSAT private BBS E-mail list there are several Hams from Japan who wrote about the huge problem they have with truck drivers operating on both the 2m and 70cm Ham bands there! One commented further that future satellite designs may have to abandon those two bands as up-link/down-links because of the volume of illegal activity. Other posters have commented about

deliberate jamming and or usage of the Amateur Satellites by pirate operators in various parts of the world as well.

Many of the more smug posters on this news group feel they have nothing to worry about, but they do. As you can see from the posted material the issue of illegal activity is now moving up to the level of international attention of multiple Radio Groups along with pressure being applied to the regulatory branch of each affected government to crack down on the problem. Sooner or later the FCC is going to get very serious about the illegal activity here too. And that pressure may come just as well from other countries, where their local radio users are sick and tired of the out of band, and over powered signals originating from here in the USA.

I'm also surprised at the self-serving ignorant comments I read in several columns in the November issue of "Popular Communication" regarding the FCC's denial of the RM-9807 petition. None of those columns addressed the fact that the USA has to abide by the ITU treaty requirements for access to frequencies below 30MHz. The exact same requirement that prohibits Ham Tech Class licensees from using HF, the CW requirement, also applies to CB Radio. The dodge is the low power limit on the equipment, about the same as the low power requirement for non CW tested Hams in Japan from my understanding, when operating on HF. The second problem as I had mentioned in a prior post, and expanded upon by Richard, is the Third Party Traffic Rule. Both of these issues really left the FCC with little choice to deny the petition. So if CBers want to DX on 11m then they have to make sure that their desire to do so, if granted by the FCC, does not violate any ITU treaty provisions. Right now that does not appear to be the case.

With the current illegal activity on and around the 11m band the FCC is going to have to clamp down to bring the USA in to conformance with the ITU treaty requirements whether they feel like it or not. And with the rapid grown in wireless services people are going to be paying more attention to so called "invaders" in to neighboring services a lot more closely. Spectrum is a limited resource and legitimate users are not going to give it up freely. What one group takes another has to lose either in spectrum access or increased potential for interference, and maybe both.

Show any antenna engineer a pic of the antenna and they will tell you
its more representative of a 1/2 wave sleeve dipole than a ground plane.
The radials are not simply bent down to achieve a match on the A/S
Starduster, the extreme angle puts the antenna into a different
category.

Hams didn't give rat tits then and generally do not now until things cross 28 or 25.

The short answer is that it was done at the FCCs initiative as part of the project to increase space for a cheaper business radio service and in fact was initially designed to go to 99 channels to 27.995. It was stopped at 40 because of the fear that the receiver oscillators on the lower channels would interfere with the upper ones. While with modern equipment, and in my never humble opinion even then, the fear was erroneous it was in fact the reason there is no Channel 1 on your TV set when it was far from erroneous. Life does move on.

In the interim, the CB band after the 1973 fuel crisis turned to garbage and the whole thing was abandoned.

The original 23 were easy. They were built out of the 11 meter ham band 26.96-27.23 plus 27.255 which was an RC freq among many other uses. This is why you have the 22, 24, 23,25 sequence. Later expansion required moving some ancient allocations which was done but as noted was never implemented.

The ham band was given to the Amateur Service after the 1947 WARC in Atlantic City after the 14 MHz band was reduced as a Region 2 (the Americas) allocation, subsequently followed by Region 3 (Asia Oceania) but never Region 1 (Europe Africa). The lack of European DX plus a number of other factors including the clearing of 15 meters of its Marine users by the mid-50s meant that 11 was a ghost town. So on September 1, 1959 it was transferred to Land Mobile use again. I am one of the few who can claim to have worked 11 as an Amateur and believe me, you can have it.

It is hard for someone not around at the time to believe the advancement in VHF UHF SHF technology. These were pre-transistor days and the average VHF tube mobile was usually mounted in the trunk. The predominant Motorola was

known as the 'coffin box'. This same technical breakthru produced many more business channels, RC receivers in the 72-76 window, and a number of better ways to do things. So the intended beneficiaries of CB freqs are all gone.

So what is left over is a regulatory structure worldwide that regrets the day it ever had a blessed thing to do with CB, cannot figure what to do with it, but sure as hell has no plans to make it bigger. Might be nice to postulate some dark conspiracy by the Amateur community but the reality is that CB from the regulatory perspective is somewhat of a landfill that is not an emergency clean-up case (no one really cares about 27 MHz) but sure as hell stinks.

Sounds a lot like the drug business. Funny how you don't hear the yahoos in
this news group talk about that aspect of the pirate FM radio "hobby" when
the subject comes up. They're totally convinced it "doesn't hurt anybody",
but it does. Talk about being naive.

Without reference handy, the 4CX250 should have a current draw on the order of 2-3 amps so a .3 drop should take about .1 to .2 ohms at something over 1 watt.

Curious to see how you solve the problem.

Technically feasible now. The problem is that there is not anywhere near
enough bandwidth to handle it via satelites.

David:

Actually, it had squat to do with HAMs at all.. What's killing the push for more channels on the CB is simply the idiots running around out there purposefully and maliciously interfering with others traffic... Add that to the amount of non-type-accepted gear being used on CB, and you have a nightmare.

Honestly, if you were eating that chocolate cake that your mom made for your dad's birthday party, and she walked in and caught you, and you asked her if you could have some, do you think that she'd say yes? I know mine wouldn't have... CB used to police its own, back in the 70's and early 80's...

Personally, and I am saying this as a HAM, I don't care if a CBer is running power, just so long as it's not interfering with my comms.. If they're running power to say "squash" and "I got my nightgown on...." then they have the wrong idea about what CB is for... But if they're doing it cleanly, and they only use what power they need to make the contact, and it doesn't interfere with anyone else, then I say have at it.. The FCC says differently. What it boils down to is this: It's up to you to follow the rules... If you follow the rules, then "mom" (the FCC) might be inclined to increase your allowance (channels). Unfortunately, your little sisters are screwing that up for you.

Just my two cents.

>
> elpasigunslinger

If you are suggesting that the Constitution requires blind obedience
by its citizens, it doesn't. I'm sure you have heard of the system of
'checks and balances', and that each part of the government must be
held accountable to the others. The US government is held accountable
to all the citizens, and in many ways. By far, the simplest and
most important method of accountability is the Constitutional right
to vote. There is also a legal system in place that is capable of
overturning any law that is inconsistant with that Constitution. It
happens all the time, and it works.

As far as a "right to drive" or a "right to talk on the radio" just
because you "paid for it", maybe you are a bit short-sighted on the
benefits of both systems. The streets, highways and freeways are used
quite a bit by people that don't drive. Many take the bus or taxis.
That's just the tip of the iceberg. Your mail arrives via the roadways,
so do your groceries, your fast-food, your computers, and even your
CB radios are delivered by truck drivers. The police in every state
is a system that relies upon the transportation system, as do all other
emergency services. And not only emergency services, but.... well, you
get the idea. The same goes for the radio waves. You benefit daily from
the LEGAL and RESPONSIBLE uses of the RF spectrum, but take much of it
for granted.

And since both these resources are limited, they MUST be tightly regulated.
If you want to keep driving on the roads, you must follow the rules.
You can't park in the middle of a freeway and block traffic just because
you 'think' that you have that 'right'. You don't. The roads, and the
airwaves, belong to everyone, and everyone benefits -- until others
come along and start thinking they have more 'right' than anyone else.

But this is not 'blind obedience', since everyone is held accountable by everyone else. Maybe, someday, the US government will become much too imposing for the public. If and when that day comes, you can bet that the people will respond. It hasn't come yet, and there absolutely no reason to make up the excuse that the government demands absolute faith, ESPECIALLY when the alternative (getting a lisence) is so easy.

How about a simple method of accountability, for starters. When the band expanded from 23 to 40, it still required a license. Of course that didn't stop a lot of them, but it helped. Then, implement an adjacent band for FM and/or SSB. The greater complexity of the radios will reduce the moron-count. Or maybe split the band: FM would be good for truckers and mobile; and SSB for those that play DX. That would require dropping the 155 mile limit. To keep power levels from lighting up your pet iguana, make the band partially self-policing. For example, a national organization for CBers could bring civil actions against abusers of the band. In fact, this might be a good idea regardless, since so much law enforcement occurs in civil courts.

That's just a few more ideas to ponder.

A much better reference than Radio Shaft would be the FCC. Log onto
their site, spend a little time there, and you will see that many of
those frequencies ARE assigned. You can download a pretty colored
chart of frequency allocations, and you can even look up freq by freq.
It's somewhat time consuming, but well worth the effort.

Thanks all for replying.
More of a case of curiosity than anything else. I have used a couple of the upper channels in the past, I spend most of my time on USB from 37-40. If I am in the upper "freeband", I mostly listen. And I definitly will not transmit in the full 10m or anyother HAM freq even if I had the radio for it. I happen to like CB's since I travel alot fixing printers and such. They can be annoying at times, but have come in useful to find if the traffic jam is construction related or an accident ahead of me.
I'll say more later, but I gotta get on the road.....

David

Use EZNEC and model it. Compare the 3D radiation pattern and gain figures to a 1/2 wave dipole and a 1/4 wave ground plane. Try all three antennas at different heights and ground conductivities. The results are very interesting! I won't give the results here because half of you guys won't believe it- I would encourage anyone curious enough to model the antenna and see the results for themselves.

If memory serves... When the FCC opened up 24-40, two things were
happening...

The sunspot cycle was peaking or had just peaked... AND there was a
TREMEDOUS increase in the popularity of CB radio. Since then, the
popularity of CB has decreased, AND the demand for frequencies of ALL
kinds by MANY customers has increased. In other words.... Don't
count on the expansion of the CB band any time soon. If the 40 you've
got aren't good enough for you, then move on to FRS, or get your
license and join then amateur ranks. BTW, hams had no input (and
probably no interest) in the expansion of the CB band in the 70's...

Hi Dick,

I was actually refering to those who seem to think that RM-9807 was
an attempt to legitimize illegal activity. (As if those involved were
continuing to violate the rule.)

However, re. my "vision," I'd be glad to give it a whirl. I gotta give
it some thought first as I'm not too familiar with all the various
spectrum allocations.

Even back in the 70's things could get out of hand. Running power,
and doing it dirty, is not a recent development. I remember hearing
people splatter across all 23 channels and bragging about their
bricks. The difference was, back then, people didn't act like jerks
on purpose. The mindset today just seems to be to make as much noise
as arrogantly as possible and to be as obtrusive as the equipment
allows. CB was originally meant as a form as COMMUNICATION, now it's
just a noisemaker toy for the intellectually challenged.

Back then you needed a license. While the requirements were gradually
relaxed, the discipline of polite conversation eroded as well. When
the FCC actually tried to ENFORCE the rules, there was a semblance of
civility and common courtesy in the channels. Now those rules are
gone. People trying to talk over one another, Channel 19 has become a
party line instead of a calling channel. It's a mess, and it's a mess
because of a lack of regulatory enforcement, the dropping of the (VERY
slack) licensing requirements and the hillbilly attitude of many CB
operators.

>-SSB

The problem is that if they're "running power," then they're doing it with dirty equipment. The justification most commonly used for running power is that they need it to "get through the skip" during a sunspot cycle, or "I need to cut through this other jerk that's running power" so a contact can be made. BULL. There's no justification for breaking the law and running more than the FCC mandated 4 watts AM/12 watts SSB. Running any more than that brands you as a criminal.

Had a local guy who ran power (about 100 watts) and one day he bragged that "people are going to be very surprised next week" when he got on the air. Sure enough, he bragged about his amp that had three power positions -- high, medium and low. The three power levels were 100 watts, 150 watts and 200 watts.

I would truly like to meet the scam artist who sold him that amp. We could go into bidness together making "skip reducers."[1]

Thanks Bert... I was just calling it as I see it...

I'll be honest, when I ran CB in the past, I transmitted out of band, and I used power occasionally. Of course, when I did these things, I did so with alot of effort put into not interfering with others.. If I was told I was interfering, I tracked down the problem, moved off to another channel, reduced power, or whatever I could do to stop said interference.

One day, while I was driving over the road, I ran with another driver who was also a HAM. He and I were on the way to Georgia.. He came out of Utah, I came out of California. For over 1000 miles, he and I talked about radio theory, amps, power mics, hash and trash, and all the other problems associated with running a radio improperly.

About 500 miles into it, we stopped at a truck stop in the panhandle of Texas to grab a bite and get cleaned up. He told me he was impressed with the sound of my rig, and finally asked me what I was running. He'd seen the dipole on the passenger side of my truck (when I passed him up, staring at his Carolina bug catcher), so he was naturally curious. When I told him it was a Grant XL that I'd tuned myself, and what other equipment I had inline, he introduced me to HAM radio. He told me that if I really wanted to talk around the world, HAM radio was the way to go.. at least I wouldn't get fined for running such a clean set. That opened my eyes.

Unfortunately, at that time, the code requirement was still there. I was then, and still am, dyslexic. (I found out later that I also suffer from ADD, but that's another story). I had a very hard time learning the code then.. and I didn't master it until last month.. When the FCC lifted the code requirement for the Tech license, I studied off and on for over a year.. and I went and passed the Tech and General written elements.

That was when I ran into Tim, WB8HRO and his wife, Laura W8DYH. If Laura's call sounds familiar, that's because it's a vanity... Tim's father was the original W8DYH, the man who came up with the Q-Codes for Amateur Communications. Tim was very very helpful to me in overcoming my Dyslexia and ADD, and in three months I went from knowing A, N, K and C to passing the 5 WPM code requirement. Honestly, since then I haven't even touched morse code. I may go back to relearn it some time... but not until the rest of my life settles down and I get more comfortable with the idea of non-voice non-data contacts on the air.

What's the point of this story? If it hadn't been for the kind, informative, instructive HAMs who I ran into over the years, I would never have gotten out of CB. I would never have gotten away from the

hash and trash on CB, and I wouldn't be having the fun making the worldwide contacts that I've been making since September 11, 2001.

So apparently, in this CBer (when I was only a CBer), they saw something more.. someone who knew how to tune and run a radio... someone who seemed to be a worthwhile addition to the Amateur ranks... someone who might help to pass on the knowledge. I'd like to think they were right... and forgive me for saying so, but I'd like to continue in AA5GO's, WB8HRO's, and W8DYH's tradition, and try to recruit those from the CB ranks who I feel would be worthwhile additions to the Amateur community. I'm not going to single any one person out for said recruiting... I plan on sharing what information I have with anyone who will listen, in the hopes that it will, at the very least, make them a better CBer.

Thanks all for replying.
More of a case of curiosity than anything else. I have used a couple of the upper channels in the past, I spend most of my time on USB from 37-40. If I am in the upper "freeband", I mostly listen. And I definitly will not transmit in the full 10m or anyother HAM freq even if I had the radio for it.

"Good for you. Avoid the ham areas like the plague and you win twice, maybe more. One, you will attract little attention from the self appointed airway Nazis, and two, there is great DX just below the ham band. Some of those who play sentry beginning at 28 do not even belong their themselves, and the ones who cry about clean barefootin' around on the ssb freeband and alleged harmonics talk just to hear themselves."

I happen to like CB's since I travel alot fixing printers and such. They can be annoying at times, but have come in useful to find if the traffic jam is construction related or an accident ahead of me.
I'll say more later, but I gotta get on the road.....
David

Even back in the 70's things could get out of hand. Running power, and doing it dirty, is not a recent development. I remember hearing people splatter across all 23 channels and bragging about their bricks. The difference was, back then, people didn't act like jerks on purpose.

"Sure they did. They were there, but not near as great a number as today. As population escalated, so did the rats. Same with amateurs. This is where it gets interesting, Raymond. Compare the stats of how many hams were around in the seventies. Next, take the stats on how many cbers were around in the seventies. Which service had the biggest influx of new users? Now, isn't the number of rats that came to both services over the year highly disproportionate? Why would that be? I am interested in your take on this."

The mindset today just seems to be to make as much noise as arrogantly as possible and to be as obtrusive as the equipment allows.

"Yes, 2 meter certainly supports this stance, as do some other frequencies."

CB was originally meant as a form as COMMUNICATION, now it's just a noisemaker toy for the intellectually challenged.

"It is pathetic to see grown amateurs equate their ticket with intellectual capacity. Our resident no/code troll actually told Timbo the other day that obtaining his ticket will prove how "smart" he is. Although the humor of making such statements is lost on the both of you, I hope you come to recognize how ironic such statements truly are. Your disdain for cb can indeed be vocalized without insults. Try it sometime."

Honestly, if you were eating that chocolate cake that your mom made for your dad's birthday party, and she walked in and caught you, and you asked her if you could have some, do you think that she'd say yes? I know mine wouldn't have... CB used to police its own, back in the 70's and early 80's...
Back then you needed a license. While the requirements were gradually

relaxed, the discipline of polite conversation eroded as well. When the FCC actually tried to ENFORCE the rules, there was a semblance of civility and common courtesy in the channels. Now those rules are gone. People trying to talk over one another, Channel 19 has become a party line instead of a calling channel. It's a mess, and it's a mess because of a lack of regulatory enforcement, the dropping of the (VERY slack) licensing requirements and the hillbilly attitude of many CB operators.

"Then what is the excuse for 2 meter and the like? We see how the ones who cry the loudest about obtaining a ticket magically receive an influx of intellect once that no code status is received, eh? They wish to convey an eliteness and enlightenment but their words and actions tell another story, one of which shows the opposite. The troubled no codes that cry that junk here are the same ones screwing up your own precious service, they simply took their hate and discontent to your freqs IN ADDITION to 11 meter."

Personally, and I am saying this as a HAM, I don't care if a CBer is running power, just so long as it's not interfering with my comms.. If they're running power to say "squash" and "I got my nightgown on...." then they have the wrong idea about what CB is for... But if they're doing it cleanly, and they only use what power they need to make the contact, and it doesn't interfere with anyone else, then I say have at it.. The FCC says differently. What it boils down to is this: It's up to you to follow the rules... If you follow the rules, then "mom" (the FCC) might be inclined to increase your allowance (channels). Unfortunately, your little sisters are screwing that up for you.
Just my two cents.
-SSB

The problem is that if they're "running power," then they're doing it with dirty equipment.

"Oh, I am sure. Now let's flip the coin. Many also have stations that would make you drool in envy, including those clean Ameritron and JRC legal limit amps. Let us now speculate. What if they AREN'T using power at all and are just chewing the fat with a radio cleaner than yours on 555? What's your beef there other than "It's not allowed?"

The justification most commonly used for running power is that they need it to "get through the skip" during a sunspot cycle, or "I need to cut through this other jerk that's running power" so a contact can be made. BULL. There's no justification for breaking the law

"Ah, but what law? Someone may call you a criminal for speeding, or waiting for the wife while sitting in the fire lane at the grocery store, running a red light due to a fast yellow, etc. What makes your opinion of what rule or law, no matter how trivial, any more important than that of the next?"

and running more than the FCC mandated 4 watts AM/12 watts SSB. Running any more than that brands you as a criminal.

"You have not went through life infraction-free or the Dali would have come to you, Ray. Judge not lest you be judged. To continue so, brands you a hypocrite. Nothing makes your interests of which infractions are disregarded any more important than the next guys concerns."

actually most of the frequencies between 25 mhz and 27mhz are UN-ASSIGNED...SOME ARE ASSIGNED,BUT "MOST OF THEM ARE NOT" sorry but i get tired of this bullshit getting repeated time and time agian. if you doubt me,go down to the local rat shack in your area.they have a volume there all about radio,frequency allocations etc.go to the section about radio frequency allocations and then you decide whos telling you the truth....fair enough????? elpasogunslinger

A much better reference than Radio Shaft would be the FCC. Log onto their site, spend a little time there, and you will see that many of those frequencies ARE assigned. You can download a pretty colored chart of frequency allocations, and you can even look up freq by freq. It's somewhat time consuming, but well worth the effort.

"Excellent idea, Sparky. Then, to silence this once and for all among you doubters, contact the entities listed that the freqs are assigned to and ask them if the freqs are used. Don't even use the word "abandoned." They will do it for you. Start with the US Forest Service, why don't you?"

Actually, that isn't true at all.

A lot of lists dealing with legal things on the internet are moderated.

Just another case of the morons trying to lead the educated in a losing
tirade of bandwith.

Actually, not really.

I don't agree with what Chris has put into place, but it doesn't take the
free speech away from the board.

All it does now is prevent people from unarguably flaming, or other such
non-sense.

Oh well. It was once great. I don't like the new format, and wish people
could have a place to post what they
wanted. I also think that a complete free-for-all is a waste of bandwith,
however.

Seems the age old adage of "The only working government is complete anarchy"
was correct.

Oh well, my 2 cents worth.

you are making reference to me again?

supresses all
> discussion of CB rules?

Not likely. Guess you haven't visited the site and actually read the rules
on the new boards, have you?

Hm. I thought the whole principle of "big
> radios" was based on the idea of free speech.

I thought it was, too. It still has free speech, and I'm not totally sure
why Chris put it up the way it is now, but all it does is prevent
the wasted bandwith that happened with the last system that was in place.
Oh well, abuse gets things taken away.

He even has a free
> speech ribbon icon on his page.

www.bigradios.com/tollfree has a free speech ribbon where? Again, Voobner
makes an asshole of himself promoting his own
ideals and beliefs, forgoing actually KNOWING what he is talking about.
Just state it Voobner, in your mind that makes it fact.

That is also the clinical definition of a pathological liar. Guess you fit
that bill as well.

Train,

Your wrong. A LOT of music has been released to the internet.

And having come from a family that actually HAS a famous musician, although the royalties can be collected on music indefinately, there is a definate timeframe when the music does enter the public for non-commercial use.

That means, you can listen to it without purchasing it. As well as the hard-to-find out-of-print music, if it isn't available, then their are certain cases where obtaining from mp3 format is OK.

However, that means nothing when the group actually releases it (like offspring did when Napster was in trouble. They put out an entire album, royalty free to the internet.

Facts must be double checked, not headlined.

You can also copyright the song, music, what-have-you, but not enforce royalty collection on public use. This basically means, that if the dessimination of the music material involves no monetary gain for either party, it is legal.

However, if a radio plays it (they make money doing so), they must pay royalties.

Or, the artist, at his discretion, can also say "Here ya go world. I just want the world to know I created it, but you can all enjoy it for nothing".

Up to the artist, not the law.

The law protects the artist(s) in the way they see fit.

> service such as Napster.

Actually, it has Train. When the proliferation of cheap double cassette
boom boxes came about
in the 80s, the RIAA or some other industry giant (I forget... Age sucks)
came forth and said they
served no other purpose but to steal music.

The "other side", representing the manufacturers of the boom boxes also
showed that it could
be used to create backups of existing music, greatest hits type
compilations, etc.

The courts ruled that it ISN'T illegal to have a copy of the music in
another form, as long as
you have a licensed copy, as well. This major argument was won because at
the time, technology
created mediums that wore out over time, and after your initial purchase,
you shouldn't have to keep
purchasing when you could get the original store bought, make a copy, play
it until it wore out, then make
another copy from your original. CD's have pretty much negated that, but it
is still on the books.

That was grandfathered into the current laws governing the internet, etc.
when they where put into place.

Your wrong here Train.

>
> > Train, in an effort to rebuke anybody that disapproves of his illegal

Problem is that *every* CBer thinks THEY are doing it 'cleanly' and
it's the OTHER GUY who is interfering.

Thanks for the advanced notice. I had to work on Sunday. Well, I did manage to make it around 3:00 p.m.! What a crowd! I did NOT see a certain someone who was supposed to be "treating"...?

All jokes aside, I spoke to Bert yesterday. Too bad you couldn't make it, Train. It was nice and the oysters were delicious, even by my standards. :-) A little on the expensive side though. The tall ships were a nice touch too. Hey, next time. Take care and 73.

At your local Radio Shack. Get a battery and a holder, and
solder wires to the board to connect the holder to it so it
will be a lot easier to replace the battery next time.

I just tape up the battery/holder and stuff it in a harness.

Refer your unit to a factory authorized technician for proper
repair and adjustment. If you just bought it, it may be
eligible for warranty repair service.

Done it. Mine is a 4 footer on a mag mount, had to throw in the back
of my suv before going into a parking garage. Shut the hatch on it.
Bent, maybe not the way you are envisioning. What might happen over
time with the overpasses, is the tips getting ground down. I had a
Francis antenna (8') whip that I did this with, after a while you
notice a difference.....

They didn't make a DX-1000. It is called the KW-1

, or any other type models have 2
> each 4CX250 or 4CX350 Tetrote Tubes.

No. The difference is the DX300 has a tuned input, whereas the KW-1 uses a
resistor swamped input.

>

Neither one did. They differ in the tuned input / swamped input.

>

The bias supply in the DX300 won't take a second tube.. Well, not the
supply really, but
the fils windings on the low voltage transformer. They are a common problem
with that amp.

> There's a small bug in the DX-300 units... the tube heater has 6.3 volts
> on it which is very bad news. Resistance wire or a plain proper value
> resistor should be placed in the proper series lead to drop the tube
> heater voltage down to 6.0 volts.

I agree that the Pride has too much heater voltage, but that is one of the
things that
makes it so hot. Keep that cathode hotter, and mo electrons = mo plate
emissions.

I think it is also good practice to lower the fils voltage, but I haven't
seen a bunch of
Prides that had low output tubes that didn't also get abused to hell...
IOW, the tubes

are being beat to shit before the cathode loses emissive capabilities.

> The lifespan of the tube is greatly reduced with the higher plate voltage.
> Other than that, it's a great "Amateur Radio" amplifier. :-)
>

> opinion of how well done the circuit is.

Simple. Put a gazillion 2 watt carbon comp resistors to grid, instead of a tuned input.

There ya have it. (I can dig out the exact values if ya wanted, but a gazillion should
be close enough for argument :))

A ground-plane antenna is a variant of the dipole antenna, designed for use
with an unbalanced feed line such as coaxial cable. It also resembles a
coaxial antenna. The ground plane antenna is a very simple antenna. It is a
quarter wave vertical radiator and radials that simulate a ground for the
radiator. It directly matches to 50 ohm coax and should show a VSWR of 1.5:1
or better at its center frequency. The match may be varied slighty by
varying the angle that the radials droop.

Now, TW,

While I often CAN agree about 2 meters and the inane conversations that go on there, I have to state that most control operators won't put up with shenanigans on their machines. At least, that's the case around here. Rule violations such as foul language, for example, will likely get the machine turned off right out from under the offending op. An exception is when we are trying to find an un-licensed station or interference; we may leave it on as 'bait' while we quietly DF the offender.
One night last summer a humorous kind of interference occurred that had us laughing as we tried to find its source. Seems a ham was sitting in his comfy easy chair with the mike in his hand. He drift-ed off to sleep, and the mike slipped down underneath him somehow. This keyed up the machine, and we could hear him snoring, beginning lightly and building up to a thunderous crescendo where-upon he would give a loud SNORT, and the process would begin again. Needless to say, the poor guy was extremely embarrassed!

Good a choice as any. Too bad in a way that you cant use something like the old glowbars that would slow down the warm up for the tube and keep the filament alive longer but come to think of it I don't think I have ever seen an Eimac tube with a blown filament.

Dick

Kenneth,,

I would have to agree with Sparky in his post below in that you already DO have access to radio resources. We as Americans take for granted so many of the freedoms we have and forget how well off we are when compared to citizens of many other nations. While citizens in other countries have access to radio, not ALL of them do. Indeed, in some countries there just ain't a Citizens Band.

In your post, you seem to forget that government is responsible to ALL its citizens. It is why the radio regulations exist, for example, and I often read into posters' laments about the FCC and its rules a certain "chafing"--a wish that these rules didn't exist. There is no perfect way to regulate radio, but due to the characteristics of RF, there has to be SOME form of regulation to permit the most access to the most RF resources by the most people. It ain't perfect, but if these very rules that irritate some CBers did NOT exist, then not only would the use of the spectrum be hampered for government, aviation, and civilians, but also for the very CBers that would like to latch onto every frequency between DC and Daylight. Just like the traffic cops and stoplights that regulate the flow of vehicle traffic, so do the rules of the RF "road". Without them, the traffic comes to a hopeless jam. If the radio renegades that like to play music and recordings do so on the existing 40 (and more) channels, what do you think they'd do if there were no consequences for doing so on the local airport frequency? Do you think their hooliganism would stop just because the airlines had to share with them? I don't THINK so.

For the most part, we have it better than most any other country radio-wise. You can use CB, FRS, MURS, GMRS, obtain a business radio license, and become a ham IF you want to. What else would you want 'em to do?

Jerry

>little on the expensive side though. The tall ships were a nice touch too.
>Hey,
>next time.

Told ya. Train, give us the word on a good Jersey event and perhaps well make the crossing. Cool beans? Expensive doesn't adequately describe it. I was generalizing above, the fried oysters were $5 per five! We never made it to the tall ships. We parked in one of the outer parking lots with a free shuttle (school) bus to the village. An altogether very nice day.

Hello Bert: Wow you have turned my head, someone wants my opinion, and I am not in front of a Judge.

The Starduster is the only antenna that I had neighbors over to threaten me that they where gonna have a crane take down my antenna. I tried new coax, grounding, raised it up, down, moved it ect ect. Back to the Moonraker and no problems, even with all the heat. In disgust, I put up a cheap Hy-Gain 1/4 wavelength ground plane antenna, no TVI, same coax.

The Starduster works ok, I guess, there are better antennas. You can call it a ground plane antenna, or coaxial sleeve antenna, who cares, it radiates equally poor in all directions, as they say. Someone else said to run it on Eznec, great idea, will probably see the lions majority of the elevation angle pattern, sending the energy up at a unwanted high angle, approx 42 degree's. Here you have to understand that having a good SWR, ain't all that you have to consider.

Someone said it had 7dB gain, with no reference to anything. Nope! More like 0 dBd gain.

Some guys can pump a lot of power thru them, but whats the point of having a lot of money tied up in equipment, with a cheap antenna. Talk about a dime holding up ah dollar.

The 5/8 versions, I don't know anything about them. 5/8 wavelength is approx 21.4 feet in the middle of the CB Band. I have never seen a Starduster 5/8, but have seen the advertisements.

The foreign made ones are a complete joke, how do people sell them and stay in business?

If your gonna put up a antenna why not put up a good 5/8 wavelength ground plane antenna, or beam? Putting up a Starduster is pissing in the wind, in my opinion. Have drinks ready for the neighbors, visting.

>I kind of heard the opposite. Particularly the Italian stuff.

I used to have an old Italian omni that looked like a vertical sitting in the middle of an ice cream cone. The construction was so visably shoddy that I was literally afraid to put it up. It had a Greek letter designation (Sigma?) but the exact name escapes my memory at the moment. It was advertised as a 3/4 wave omni. I had a friend, Jerry, that ran a FT-757GX with one and swore by it. I can't tell you about the performance because, as I said, it never made it above the roofline. I do remember that it had a gamma match.

It was an ad off a web page for the antenna that claimed 7db, while another had it rated at 5 db. 1 called it a 1/4 wave another called it a 1/2 wave. The dead give away is it needs no matching network and can be fed direct, not so with the 1/2 wave

1640. Antenna Gain Figures.

Newsgroup: rec.radio.cb
Date: 2001-10-17 02:07:53 UTC
From: Itsallgood <itsallgood1@home.comspam>
Message-ID: <ZJ5z7.136263$5A3.43634906@news1.rdc2.pa.home.com>
Source record: 100752

More than about ten years ago a humorous article on antenna gain was published in a radio magazine. The article stated that there are three kinds of antenna gain figures:

1. the dB/d and dB/i gain based on CCIR regulations (the true and honest real gain!)
2. the "dB/ham radio gain," which is 6dB higher than the real one.
3. the "dB/CB gain," which is 10 dB higher than the real one.

1641. Re: interference from the users of CB radio equipment - intruders on VHF and UHF satellite bands

Newsgroup: rec.radio.cb
Date: 2001-10-17 02:13:20 UTC

Message-ID: <mN5z7.10693$n41.235946@e3500-atl2.usenetserver.com>
Source record: 100753

Kenneth,

I don't think you are grasping the nature of the ITU and its role in regulating international radio.
First off, the ITU is NOT made up of hams. The ARRL and other countries' various lobbying
organizations will have representation, but this is NOT about ham radio alone. Hams and CBers
are NOT the only entities using HF radio. The users include world governments, military forces,
civilian agencies which include construction, shipping, and other commercial ventures. The actual
ITU is made of various governmental delegates and representatives who have been presented with
"wish lists" from entities from all over the world. They study these proposals and the impact, good
or bad, on all the nations represented. One of the issues before them is the interference being caused by unlicensed operators (pirates) including operations in the so-called "freeband". You see,
that's the rub: there AINT no "freeband". Much of the interference being caused by Mexican "cabbies" is not on 2 meters, but on the bands from 25-29 MHZ. Aside from some domestic allocations, we tend to forget that OTHER nations use this area as well, and THEY are beginning to
complain about the "freebanders"--and not necessarily about US "freebanders". So the ITU will
be studying ways to deal with this, no doubt insisting member nations' regulatory agencies crack down on it.

I can understand why "freebanders" mistakenly think they aren't bothering anybody. In professional
communications, such as the military, there will be an entire group of frequencies laid out in their
band plan and Frequency Management strategy. As this pertains to HF, we all know that atmos-pherics plays a big part, especially relating to a condition called "MUF" (Maximum Usable Freq-
uency). By determining this MUF, the agency can use it to its advantage to either get traffic out a
long distance, OR restrict it to a given geographical area. In my own case, I happen to belong to
an organization called Civil Air Patrol which, in its assignments as USAF Auxiliary, uses a variety of
HF frequencies scattered thru the spectrum from 2-26+ MHZ. In fact, these frequencies ARE USAF frequencies. Let's take that one on 26, for example.

That area has become rife with inter-
ference from domestic and foreign "freebanders". What is it used for? 1) a
reliever frequency for
incidental mission base ops such as flight line, administration, inter-base
messages, runners, staff
coordination on 50 watt AM 2) Sometimes used as a base to mobile frequency
on 100 watt SSB
for operations up to 30 miles out. 3) To keep ground traffic off VHF air
circuits. 4) To foil news
hounds and "fire truck" chasers from listening on FM scanners and showing up
at an incident where
their presence is illegal and could hinder a crash investigation. 5) To
prevent family members of a
missing pilot, child, or other relative from listening on scanners and
learning bad news--even though
such traffic is coded, it might be "leaked" by accident (forbidden). BUT,
it becomes ever more dif-
ficult to use our 26 meg frequencies due to illegal "squatters". That, too,
is likely to be one of the
things discusseed by ITU. This is only an example. Do such incursions piss
me off? Damn right!
SOBs got no business being there! Do I ever turn them in? Hell YEAH! I
occasionally catch a
local operating there, and when I find out where he is/who, etc, off goes a
letter to USAF Freq-uency Management and a little email to the "right"
people. The stuff that goes on above the legal
40, I don't have a lot to do with--until it gets to 10 meters. Then it is a
different story. You might
think I am an a**hole, and that's fine. But it is NOT OK to walk around in
my pasture, nor is it
OK to usurp frequencies I use for a legitimate purpose. Your hobby is NOT
more important than
the life I am trying to save, the crashed plane I am trying to find, or the
toddler that wandered off into the woods.

You remember wrong. That's why 70 cm works better in a building than 2 meters
and so forth. The higher the frequency, the better the permiability.

Uh, ok Dave, for the sake of argument, how can something with a 9 foot radiator and three 9 foot radials be considered a half wave at 27 MC? The thing has no matching network, and the radiator is isolated from the radials. The only purpose in the little whiskers on it, is to bleed static....and they do not even work well for that. I have seen charges build up on coax to the point that it arcs across the connector with these things. Read fire hazard here. Now, if you mean it could be a half wave for 6 meters, that might be doable, but it still needs a matching network.

Well then, another question. Sense we seem to have gotten sidetracked
a little bit into the 2M area, what is the average range for 2m/440?
I know 11m is about 2 - 5 miles depending on conditions. If I were to
get my license, this would be about the main bands that I would be in.

It would take six 125 amp alternators to run that properly. I know of
a big GMC for sale. Can you see a Mr. Coily on top?

1658. Ground plane vs. Dipole

Newsgroup: rec.radio.cb
Date: 2001-10-17 06:27:29 UTC
From: fgillil@tincan.org
Message-ID: <e182e02.0110162227.49b9a5b0@posting.google.com>
Source record: 100770

Has everyone forgotten their basics? Remember this: "A 'ground plane' is a counterpoise that does not radiate." It can be natural (the earth) or artificial (elevated radials). And everyone seems to be ignoring the key word 'plane'. When the elements are flat, it doesn't radiate. When they are sloping, they radiate to some extent. So a 'sloping ground plane' is not a true ground plane, but a ground plane - dipole hybrid.

The function defines the terms, the terms don't define the functions. So drop all the semantics and study your basics.

Really? Then why are lower frequencies preferred for metal detectors
and ground-penetrating radar?

Sure, and then I'll ask them if they think it's ok for unlicensed
twits to muscle in on their freqs. Hey, after I point this out, they
might just monitor their freqs a bit more closely! Great idea, twist!

I think that most 'Radio Outlet' shops would like us to use the dB/i so that they can bump up the figures, but I prefer to see my measurement as relevant to that taken over a half wave dipole. At least it's relevant to the way in which we use the term... Just check the package for white dust when you open it!

>
> David

As you go higher in frequency, line-of-sight is pretty much the rule. Range is dependent upon a lot of factors, such as terrain, trees, buildings, etc. The additional power improves the situation within your range, but doesn't really extend it very far. One real advantage of licensed communication above 11m is the ability to use repeaters. You can also use telephone links, data, packet, DTMF, FM, CTCSS, and a whole lot of other modes. These are some of the tools used for good radio communication, and are rarely used by 'freebanders'.

Skip is a different story. The lower freqs are better 'skip' bands, and can be used by any amateur willing to take the 5wpm code test (the equivalent of typing with one finger). Range is almost unlimited. I just talked to someone yesterday who reached 8000 miles using only 8mW on a lowfer band (no shit)!

11m doesn't have reliable skip conditions, and the requried antennas are a bit bulky compared to the more popular 2m and VHF-Hi bands. It has little practical use except for what it was intended: a low-power short-range radio service. For that purpose, CB is great. Anything else and you should really look into getting your ham or GMRS license.

Hi
Take a look at the ARRL Wilderness Protocol.
It advocates monitoring 146.52 for five minutes every three hours beginning
at 7:00 am. There are other frequencies for 6m 440 220 and 1294.5.
It is printed in the Repeater directory and may be on their web site.
I do not know if it is in common use, maybe some hikers on the list could
give more info.

From: joxendi@bellsouth.net (Jerry Oxendine)
Now, TW,
While I often CAN agree about 2 meters and the inane conversations that go on there, I have to
state that most control operators won't put up with shenanigans on their machines. At least, that's
the case around here. Rule violations such as foul language, for example, will likely get the machine
turned off right out from under the offending op.
"And I don't doubt it, Jer! You know what time it is and where this was directed.
The same can be said for most freebanders. Rare is the Alpha Tango or Sugar Delta member, or any other semi-organized DX group member, that is a problem operator."

An exception is when we are trying to find an un- licensed station or interference; we may leave it on as 'bait' while we quietly DF the offender.

"We have our exceptions as well. Judging strictly by their postings and insults, it is a very probable scenario that the nocodes causing strife among this group act the exact same way on air, no matter the frequency."

One night last summer a humorous kind of interference occurred that had us laughing as we tried to
find its source. Seems a ham was sitting in his comfy easy chair with the mike in his hand. He drift-
ed off to sleep, and the mike slipped down underneath him somehow. This keyed up the machine,
and we could hear him snoring, beginning lightly and building up to a thunderous crescendo where-
upon he would give a loud SNORT, and the process would begin again. Needless to say, the poor guy was extremely embarrassed!

"We had a similar situation, but the culprit wasn't local and it wasn't a single operator. We had some real signals coming to the pile last year for a week or so. Some other states heard it as well, and there was even a discussion about it here. A solid carrier would deviate and waver all day from 3 to 9 plus. One day it could be found on channel 4 or 5, and the next day it might have been on 12 or 13. Somebody was testing something...someone posted a link that explained it, but it was never confirmed unequivocally."

actually most of the frequencies between 25 mhz and 27mhz are
UN-ASSIGNED...SOME ARE ASSIGNED,BUT "MOST OF THEM ARE NOT" sorry but i
get tired of this bullshit getting repeated time and time agian. if you
doubt me,go down to the local rat shack in your area.they have a volume
there all about radio,frequency allocations etc.go to the section about
radio frequency allocations and then you decide whos telling you the
truth....fair enough????? ? elpasogunslinger
A much better reference than Radio Shaft would be the FCC. Log onto
their site, spend a little time there, and you will see that many of
those frequencies ARE assigned. You can download a pretty colored chart
of frequency allocations, and you can even look up freq by freq. It's
somewhat time consuming, but well worth the effort.
"Excellent idea, Sparky. Then, to silence this once and for all among
you doubters, contact the entities listed that the freqs are assigned to
and ask them if the freqs are used. Don't even use the word "abandoned."
They will do it for you. Start with the US Forest Service, why don't
you?"
Sure, and then I'll ask them if they think it's ok for unlicensed twits
to muscle in on their freqs.

Hey, after I point this out, they might just monitor their freqs a bit
more closely! Great idea, twist!

"Of course it's a great idea, Sparky. You will then see how your views
concerning these frequencies are skewed. If you are able to get beyond
your usual biases concerning your false pro-legality position, you may
find this yet another area where you are dead wrong."

from the users of CB radio equipment - intruders on VHF and UHF satellite bands

Group: rec.radio.cb Date: Tue, Oct 16, 2001, 10:13pm From: joxendi@bellsouth.net (Jerry Oxendine)
Kenneth,
I don't think you are grasping the nature of the ITU and its role in regulating international radio.
First off, the ITU is NOT made up of hams. The ARRL and other countries' various lobbying
organizations will have representation, but this is NOT about ham radio alone. Hams and CBers
are NOT the only entities using HF radio. The users include world governments, military forces,
civilian agencies which include construction, shipping, and other commercial ventures. The actual
ITU is made of various governmental delegates and representatives who have been presented with
"wish lists" from entities from all over the world. They study these proposals and the impact, good
or bad, on all the nations represented. One of the issues before them is the interference being caused by unlicensed operators (pirates)
including operations in the so-called "freeband". You see, that's the rub: there AINT no "freeband". Much of the interference being caused by
Mexican "cabbies" is not on 2 meters, but on the bands from 25-29 MHZ.
Aside from some domestic allocations, we tend to forget that OTHER nations use this area as well, and THEY are beginning to complain about
the "freebanders"--and not necessarily about US "freebanders". So the ITU will
be studying ways to deal with this, no doubt insisting member nations' regulatory agencies crack down on it.
I can understand why "freebanders" mistakenly think they aren't bothering anybody. In professional
communications, such as the military, there will be an entire group of frequencies laid out in their
band plan and Frequency Management strategy. As this pertains to HF, we all know that atmos-pherics plays a big part, especially relating to a
condition called "MUF" (Maximum Usable Freq-
uency). By determining this MUF, the agency can use it to its advantage to either get traffic out a
long distance, OR restrict it to a given geographical area. In my own case, I happen to belong to
an organization called Civil Air Patrol which, in its assignments as USAF Auxiliary, uses a variety of

HF frequencies scattered thru the spectrum from 2-26+ MHZ. In fact, these frequencies ARE USAF frequencies. Let's take that one on 26, for example.

"A noble example, but where exactly on 26? I have long maintained that education of where one is operating is crucial.
Indulge me if you will, for a second. Forget the military freqs for this discussion. Forget the harmonics. I have agreed in the past, and have told you as much, that you have given the best argument yet against freebanders concerning unintentional harmonics that I have yet encountered. However, and this is the crux of my argument, not one person has put forth a valid reason, nor shown one single example of how chewing the fat on my favorite DX forest service or petroleum frequency with a barefoot clean rig is damaging to anyone anywhere, those services notwithstanding. In such a scenario, my harmonics, if detectable, depending on my gear, can be no worse than the Air Patrols OR the AF's, which I would assume to be minimal. After all, if the common cber can achieve near perfection with his station, should we expect anything less from the military? Who is the victim in this case? The most vocal opponents of this practice are the least credible, solely basing their argument on "Illegal vs. legal" and "what if's" and "it COULD happen" and related incorrect hype, and fabricated incidents.
Pure balderdash, Jer, and you appear to recognize this in certain instances, otherwise I don't believe you would have seized on specific freqs. Can I see your point? Absolutely. Legalities aside, It doesn't change the facts of the matter. Yes, slamming gobs of power with dirty gear can cause a problem on certain freqs., but even then, the magnitude is rare, if not virtually nonexistent. No, barefoot talking on abandoned and discarded freqs with a clean rig will not interfere with emergency ops or cause a plane to crash. It will not cause your garage door to violently assault you with a mind of it;s own. Largest concern: An angry neighbor, receiving a letter from the FCC stating you are in violation and will you please respond? COULD something else occur? Anything is possible, but the odds are greater of being struck by lightning...do we find ourselves worrying about that? (Well, we do here, at times...lightning capital of the WORLD)
The fines and repercussions hyped by these laughable ng anticbers for skip and DX shooting in between is about as real as they are. You will be contacted first, and you will be given the opportunity to remedy the situation, then , if you are a complete moron and continue to violate, you deserve what you get. Anything else is pure bunk."

That area has become rife with inter-
ference from domestic and foreign "freebanders". What is it used for? 1) a
reliever frequency for
incidental mission base ops such as flight line, administration, inter-base messages, runners, staff
coordination on 50 watt AM 2) Sometimes used as a base to mobile frequency on 100 watt SSB for operations up to 30 miles out.

"Yup. And there are frequencies in the 26 band that are remote FM broadcasts as well."

3) To keep ground traffic off VHF air circuits. 4) To foil news hounds and "fire truck" chasers from listening on FM scanners and showing up at an incident where
their presence is illegal and could hinder a crash investigation. 5) To prevent family members of a
missing pilot, child, or other relative from listening on scanners and learning bad news--even though
such traffic is coded, it might be "leaked" by accident (forbidden). BUT,
it becomes ever more dif-
ficult to use our 26 meg frequencies due to illegal "squatters". That, too,
is likely to be one of the
things discusseed by ITU. This is only an example. Do such incursions piss me off? Damn right!

"Granted. With your knowledge, you unmistakenly are aware of abandoned freqs. Now, does me talking on an frequency piss you off as well?"

SOBs got no business being there! Do I ever turn them in? Hell YEAH! I occasionally catch a
local operating there, and when I find out where he is/who, etc, off goes a letter to USAF Freq-uency Management and a little email to the "right" people. The stuff that goes on above the legal 40, I don't have a lot to do with--until it gets to 10 meters. Then it is a different story. You might
think I am an a**hole, and that's fine. But it is NOT OK to walk around in my pasture, nor is it
OK to usurp frequencies I use for a legitimate purpose. Your hobby is NOT more important than
the life I am trying to save, the crashed plane I am trying to find, or the toddler that wandered off into the woods.

"All the more reason to know where one transmits. Intentional interference with communications of ANY professional nature should be dealt with swiftly. Ignorance is no excuse. It is up to the op to understand the "fallout" of his transmission.
No matter our difference of opinion, Jer, one thing you must admit, is most here that are vocal about their anti sentiments (so far) for the freeband know the least about the area of the bands, no?"

From: joxendi@bellsouth.net (Jerry Oxendine)
Kenneth,,
I would have to agree with Sparky in his post below in that you already DO have access to radio
resources. We as Americans take for granted so many of the freedoms we have and forget how
well off we are when compared to citizens of many other nations. While citizens in other countries
have access to radio, not ALL of them do. Indeed, in some countries there just ain't a Citizens Band.
In your post, you seem to forget that government is responsible to ALL its citizens. It is why the
radio regulations exist, for example, and I often read into posters' laments about the FCC and its
rules a certain "chafing"--a wish that these rules didn't exist.

"Not all, and not exactly. Many see certain rules as not only antiquated, but self serving, as in serving only a few as opposed to the greater. Some may also feel that certain rules were passed with severe deference to pertinent issues and the bottom line was effective lobbying by whoever had the green at the time. A perfect example is the auctioning of frequencies. Only thing that matters there is who antes up the most. Explain how these rules were designed for our "safety."

There is no perfect way to regulate
radio, but due to the characteristics of RF, there has to be SOME form of regulation to permit
the most access to the most RF resources by the most people. It ain't perfect, but if these very
rules that irritate some CBers did NOT exist, then not only would the use of the spectrum be
hampered for government, aviation, and civilians, but also for the very CBers that would like to
latch onto every frequency between DC and Daylight.

"I was surprised that you tend to look at it in that light. I never took you for the type that feels threatened by cbers seeking to steal your spectrum."

Just like the traffic cops and stoplights
that regulate the flow of vehicle traffic,

"Perfect analogy. If little Johny gets whacked by a car in the projects and the project people call for a stop sign, then on the other side of town, little Roland gets creamed by a truck in front of the countryclub and the whitebreads are calling for a stopsign, guess who get's it?"

so do the rules of the RF "road". Without them, the traffic
comes to a hopeless jam. If the radio renegades that like to play music
and recordings do so on
the existing 40 (and more) channels,

"OR 2 meter..."

what do you think they'd do if there were no consequences for
doing so on the local airport frequency?

"Apples and oranges, Jer."

Do you think their hooliganism would stop just because the airlines had
to share with them? I don't THINK so.
For the most part, we have it better than most any other country
radio-wise. You can use CB, FRS, MURS, GMRS, obtain a business radio
license, and become a ham IF you want to. What
else would you want 'em to do?

"Not a damn thing. I'm perfectly content working the world without
having to give my personal information (addy, SS#, etc.) to the
government. I like my radio just the way it is. Fact is, most cb ops
aren't the ones always bitching and moaning about the state of things on
this group, cb being only one of many...."

1697. FA: Uniden PC 76XLW Professional CB Radio Excellent Condition

Newsgroup: rec.radio.cb
Date: 2001-10-17 17:46:35 UTC
From: pmc@world.std.com
Message-ID: <42a2f020.0110170946.6d3befc2@posting.google.com>
Source record: 100659

My Uniden PC 76XLW Pro Radio is too much for me. I'm gonna replace it with a little tiny thing. I listed it on eBay and there's 4-days of a 10-day auction left:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1284600821

Here's the description I typed up for it:

I'm selling my high performance Uniden PC 76XLW which is a professional CB radio. Honestly, it's too much radio for me. This baby is awesome -- you'll love it. The "W" model means it picks up weather channels. This is a great feature when the weather gets ugly and it's not a feature you find in many other CB radios.

Comes with original box, manual, and mic. It's a little over two years old and in EXCELLENT condition save a small 1-inch slightly indented scratch on the top surface about 3/4 of the way toward the back (it got scratched while being slid out from under my dash). It will not be visible with the unit mounted. Otherwise, this unit is perfect. No use over the last year so overall use is light.

Features:
- 40 Channels Operation
- NOAA Weather Alert Channels
- Signal/SWR Meter
- Mic Gain Control
- RF Gain Control
- Delta Tune Control
- Noise Blanker
- Antenna Warning LED
- S/RF/SWR Meter
- NB/ANL Switch
- PA/CB Switch
- Bright/Dimmer Switch
- Instant Channel 9

Buyer pays $6 shipping/handling. Certified Check, Bank Check, or Money Order only please. I cannot take credit cards or a personal check.

This thing sells new for well over $100 at most sites. Here's a link or three to sites that have info on this unit:

http://www.truckingsuccess.com/record_detail.php3?recordid=41
http://www.21stcenturyplaza.com/mobile/4.html
http://thomas-distributing.com/uniden1.htm

Email me with any additional questions.

As all AMERICANS will say, "We are a free and democratic country”,
because of this we have free speech. Now as our resident RF Nazi’s
love to say, “We have the write to post this” correct, they do. At
the same time it is not against the law for anyone that doesn’t like
their opinions to post it.
It almost becomes laughable when you see Aaron, Itsallgood,
Leland posts how people are criminals. They don’t seem to understand
that the constitution says your innocent until proven guilty, but these
three have taken it upon themselves to be some sort of vigilantes,
with the “no matter what you say, you are guilty” attitude.
Well sorry to say, you are the whiners, not the people that talk
or even say they own or use an amp. You are not an employee
for the FCC, nor are you a federal marshall, so there really isn’t
much that you can do, other than harasses and accuses people of
wrong doings.
In closing, I do love how these very same persons that are accusing,
people of freebanding, running amps, when you do a google search
on them, you will find that they, themselves are just As guilty as
the ones they are accusing. Why else would they hide behind
fake screen nics so they can’t be e-mailed direct, post from anonymous
accounts, yes, they are as guilty as anyone they accuse, just look
at google and you will see that they are only here for the troll
value alone.

I think you know I live in London England and there were 'few' times when if you were on his frequency that you couldn't hear him, even in the middle of night when the band was 'flat'.

Of course they operated randomly and varied the frequency. At times it seemed very broad banded other times just on one spot frequency.

I think one of the aspects of their system was the effect of being able to have the signal against the curvature of the earth. Their idea of over the horizon radar.

Anyhow, it was stronger than my mobile.

Hi Dick,

There are certainly some rather poor meters and circuits. The old UK Midland CBs (FM versions of the US AM CBs) were known for the poor readings. They seemed to stay below the "9" reading until somebody was really close, when they would suddenly pin the meter. Nobody ever seemed to give anything between the two readings.

A common problem in this country is for "rig doctors" to turn the meter up in the belief that the radio is actually receiving better. The CBer is overjoyed when he notices that everyone is giving him "30+", and then there's that wonderfully reassuring click as the meter hits the end stop.

My favourite CB quotes... lol...
" You're giving me no signal, but I can hear you clearly. "
" You're signal is a cracking 30+, but you're in among the noise level."
" That antenna is better for receive, the one I am using boosts your transmit more. "

Regards,

Brainbuster.

Hi Mike,

How about bumping on the kerb, and driving through on two wheels.
This may affect the performance if you transmit while driving this way, so it
may be best to wait until you get out the other side.

lol,

Brainbuster.

TW,

Actually, I don't feel threatened. Perhaps I didn't state my case well.
What I am trying to say is that we DO have it pretty well when compared to
some countries who don't allow their ordinary
citizens access to radio at all. I tried to indicate that, while the system
isn't perfect by any means,
it is much better than the alternatives; either being forbidden to use a
radio, or having NO regu-
lations at all. The latter would creat havoc. I DO get the impression from
some posters that they
would, indeed, just love to get from under ANY authority whatsoever. And
that would, of course,
make hell for all. NOBODY could use the spectrum and it would become
another game of King
of the Hill just like on Channel 6.

Jerry

Twistedhed <twistedhed@webtv.net> wrote in message
news:3951-3BCDB6F9-50@storefull-126.iap.bryant.webtv.net...
From: joxendi@bellsouth.net (Jerry Oxendine)
Kenneth,,
I would have to agree with Sparky in his post below in that you already
DO have access to radio
resources. We as Americans take for granted so many of the freedoms we
have and forget how
well off we are when compared to citizens of many other nations. While
citizens in other countries
have access to radio, not ALL of them do. Indeed, in some countries
there just ain't a Citizens Band.
In your post, you seem to forget that government is responsible to ALL
its citizens. It is why the
radio regulations exist, for example, and I often read into posters'
laments about the FCC and its
rules a certain "chafing"--a wish that these rules didn't exist.

"Not all, and not exactly. Many see certain rules as not only
antiquated, but self serving, as in serving only a few as opposed to the
greater. Some may also feel that certain rules were passed with severe
deference to pertinent issues and the bottom line was effective lobbying
by whoever had the green at the time. A perfect example is the
auctioning of frequencies. Only thing that matters there is who antes up
the most. Explain how these rules were designed for our "safety."

There is no perfect way to regulate
radio, but due to the characteristics of RF, there has to be SOME form
of regulation to permit
the most access to the most RF resources by the most people. It ain't
perfect, but if these very
rules that irritate some CBers did NOT exist, then not only would the
use of the spectrum be
hampered for government, aviation, and civilians, but also for the very
CBers that would like to
latch onto every frequency between DC and Daylight.

"I was surprised that you tend to look at it in that light. I never took
you for the type that feels threatened by cbers seeking to steal your
spectrum."

Just like the traffic cops and stoplights
that regulate the flow of vehicle traffic,

"Perfect analogy. If little Johny gets whacked by a car in the projects
and the project people call for a stop sign, then on the other side of
town, little Roland gets creamed by a truck in front of the countryclub
and the whitebreads are calling for a stopsign, guess who get's it?"

so do the rules of the RF "road". Without them, the traffic
comes to a hopeless jam. If the radio renegades that like to play music
and recordings do so on
the existing 40 (and more) channels,

"OR 2 meter..."

what do you think they'd do if there were no consequences for
doing so on the local airport frequency?

"Apples and oranges, Jer."

Do you think their hooliganism would stop just because the airlines had
to share with them? I don't THINK so.
For the most part, we have it better than most any other country
radio-wise. You can use CB, FRS, MURS, GMRS, obtain a business radio
license, and become a ham IF you want to. What
else would you want 'em to do?

"Not a damn thing. I'm perfectly content working the world without
having to give my personal information (addy, SS#, etc.) to the
government. I like my radio just the way it is. Fact is, most cb ops
aren't the ones always bitching and moaning about the state of things on
this group, cb being only one of many...."

Source record: 100683

By virtue of USAF policy, I am not permitted to personally divulge any USAF frequency in spite of
the fact that any civilian can obtain these in most of the so-called "Secret Frequency" books. I WILL tell you this; The worst "freeband" frequencies, the ones that give us grief are 26.615 and
26.625. Our frequencies are above, below, and around that general area, and the splatter is horrendous. Also, as to harmonics from military equipment, you must know that the NTIA standards are MUCH tighter than those of FCC and all military equipment, including my own
IC706s must meet those standards or the station is NOT allowed to operate there. Same way on
VHF. Certain amateur equipment mfrs do make high stability oscillators as options for their
equipment, and there are certain mil spec mfrs such as Harris, Grove, and Tait (VHF). I will be
obtaining a Tait in December because my VHF gear will "sunset" at that time. Are we on those
frequencies 24/7? No. The 26 MHZ frequencies are like tools in your toolbox. You might not
need your socket set for weeks. But when you DO, you expect it to be there ready for use. So
you open your toolbox and discover that somebody has "borrowed" your 5/8" socket--the very one you need. The ONLY one that will fit. Now you are PISSED big time because your tool is
missing. Same way with 26 MHZ for CAP. We find a communications need and look in our
toolbox (the MUF) to find the "socket" (frequency) that will do the job. VERDAMMT! WAS IST LOS? Someone has borrowed our tool (frequency) and it is not available because that person
has stolen it, borrowed it, or whatever. Now WE are pissed because we can't even use our own
tools. Now we must transfer that traffic to VHF or to another HF frequency that gets out long haul
where we "might" interfere with yet another search mission in another state. So, by not being able to use the ideal frequency in the instant case, the harm comes in several possible ways: 1) On VHF
where the traffic load (tactical) is the heaviest by far we add yet more traffic that could've been handled on the low power 26 circuit had it been free of jabber, squeaks, squawks, and racket. 2)
We now raise the possibility of having onlookers at a crash site that might interfere with the wreck-
age by moving or taking evidence, or simply by being in the way until we can get law enforcement
there to make 'em leave. 3). In spite of coded traffic, victims' relatives

may be able to figure out
adverse news prior to procedures designed to deal with the family can be
implemented. 4) Putting
the traffic on long range strategic frequencies where it will be broadcast
all over the world when such is neither needed or wanted, and perhaps
causing interference to OTHER emergency opera-
tions that may require the use of said strategic frequencies. Not that it
always will, but the direct
operations of illegal stations, OR the forced re-direction of traffic by an
agency because of such
operations CAN cause the agency to interfere with itself while their forces
in another area
attempt to exercise their band plans to deal with some other local scenario.

Finally, to address your questions about harm done on certain "freeband"
frequencies, I somewhat
agree that in some cases there may not be any---especially if those
frequencies are themselves quite
close to the band edges of CB. But what is happening that has caught the
attention of ITU, and may eventually create an international ":incident", is
the straying farther and farther and still farther of
the so-called "freebanders". They are boldly promoting export radios with
the capability of operating from 24-32 MHZ--or at lease those who would
peddle such wares to them---and people are simply using them. Twenty-eight
dot oh eight five sounds like channel 19 now, and
quite frankly, if I had the permission and the means, I'd like to key down
with a gazillion watt AM
transmitter and blank out every illegal idiot on there! Again, they are
cutting across "my" pasture
and trespassing on "my" turf. But I cannot do that. If the freebanders
will usurp forestry frequencies, then go onto 10 meters, then down onto 12
meters, then down to 17, where does it
stop? The asnwer is, it won't! That is why ITU is addressing this
issue--to draw a line in the sand
and turn back the stampede of unlicensed intruders that is coming IF such is
ignored. It is not only
the US that is affected by this; complaints are coming from all over the
world. "tis just the way it is.

Twistedhed <twistedhed@webtv.net> wrote in message
news:3951-3BCDB23E-48@storefull-126.iap.bryant.webtv.net...
from the users of CB radio equipment - intruders on VHF and UHF
satellite bands

Group: rec.radio.cb Date: Tue, Oct 16, 2001, 10:13pm From:
joxendi@bellsouth.net (Jerry Oxendine)
Kenneth,
I don't think you are grasping the nature of the ITU and its role in
regulating international radio.
First off, the ITU is NOT made up of hams. The ARRL and other countries'

various lobbying
organizations will have representation, but this is NOT about ham radio alone. Hams and CBers
are NOT the only entities using HF radio. The users include world governments, military forces,
civilian agencies which include construction, shipping, and other commercial ventures. The actual
ITU is made of various governmental delegates and representatives who have been presented with
"wish lists" from entities from all over the world. They study these proposals and the impact, good
or bad, on all the nations represented. One of the issues before them is the interference being caused by unlicensed operators (pirates) including operations in the so-called "freeband". You see, that's the rub: there AINT no "freeband". Much of the interference being caused by Mexican "cabbies" is not on 2 meters, but on the bands from 25-29 MHZ. Aside from some domestic allocations, we tend to forget that OTHER nations use this area as well, and THEY are beginning to complain about the "freebanders"--and not necessarily about US "freebanders". So the ITU will
be studying ways to deal with this, no doubt insisting member nations' regulatory agencies crack down on it.
I can understand why "freebanders" mistakenly think they aren't bothering anybody. In professional
communications, such as the military, there will be an entire group of frequencies laid out in their
band plan and Frequency Management strategy. As this pertains to HF, we all know that atmos-pherics plays a big part, especially relating to a condition called "MUF" (Maximum Usable Freq-
uency). By determining this MUF, the agency can use it to its advantage to either get traffic out a
long distance, OR restrict it to a given geographical area. In my own case, I happen to belong to
an organization called Civil Air Patrol which, in its assignments as USAF Auxiliary, uses a variety of
HF frequencies scattered thru the spectrum from 2-26+ MHZ. In fact, these frequencies ARE USAF frequencies. Let's take that one on 26, for example.

"A noble example, but where exactly on 26? I have long maintained that education of where one is operating is crucial.
Indulge me if you will, for a second. Forget the military freqs for this discussion. Forget the harmonics. I have agreed in the past, and have told you as much, that you have given the best argument yet against freebanders concerning unintentional harmonics that I have yet encountered. However, and this is the crux of my argument, not one person has put forth a valid reason, nor shown one single example of how chewing the fat on my favorite DX forest service or petroleum frequency with a barefoot clean rig is damaging to anyone anywhere, those services notwithstanding. In such a scenario, my harmonics, if detectable,

depending on my gear, can be no worse than the Air Patrols OR the AF's, which I would assume to be minimal. After all, if the common cber can achieve near perfection with his station, should we expect anything less from the military? Who is the victim in this case? The most vocal opponents of this practice are the least credible, solely basing their argument on "Illegal vs. legal" and "what if's" and "it COULD happen" and related incorrect hype, and fabricated incidents.
Pure balderdash, Jer, and you appear to recognize this in certain instances, otherwise I don't believe you would have seized on specific freqs. Can I see your point? Absolutely. Legalities aside, It doesn't change the facts of the matter. Yes, slamming gobs of power with dirty gear can cause a problem on certain freqs., but even then, the magnitude is rare, if not virtually nonexistent. No, barefoot talking on abandoned and discarded freqs with a clean rig will not interfere with emergency ops or cause a plane to crash. It will not cause your garage door to violently assault you with a mind of it;s own. Largest concern: An angry neighbor, receiving a letter from the FCC stating you are in violation and will you please respond? COULD something else occur? Anything is possible, but the odds are greater of being struck by lightning...do we find ourselves worrying about that? (Well, we do here, at times...lightning capital of the WORLD)
The fines and repercussions hyped by these laughable ng anticbers for skip and DX shooting in between is about as real as they are. You will be contacted first, and you will be given the opportunity to remedy the situation, then , if you are a complete moron and continue to violate, you deserve what you get. Anything else is pure bunk."

That area has become rife with inter-
ference from domestic and foreign "freebanders". What is it used for? 1) a
reliever frequency for
incidental mission base ops such as flight line, administration, inter-base messages, runners, staff
coordination on 50 watt AM 2) Sometimes used as a base to mobile frequency on 100 watt SSB for operations up to 30 miles out.

"Yup. And there are frequencies in the 26 band that are remote FM broadcasts as well."

3) To keep ground traffic off VHF air circuits. 4) To foil news hounds and "fire truck" chasers from listening on FM scanners and showing up at an incident where
their presence is illegal and could hinder a crash investigation. 5) To prevent family members of a
missing pilot, child, or other relative from listening on scanners and learning bad news--even though
such traffic is coded, it might be "leaked" by accident (forbidden). BUT,
it becomes ever more dif-
ficult to use our 26 meg frequencies due to illegal "squatters". That, too,

is likely to be one of the
things discusseed by ITU. This is only an example. Do such incursions piss me off? Damn right!

"Granted. With your knowledge, you unmistakenly are aware of abandoned freqs. Now, does me talking on an frequency piss you off as well?"

SOBs got no business being there! Do I ever turn them in? Hell YEAH! I occasionally catch a
local operating there, and when I find out where he is/who, etc, off goes a letter to USAF Freq-uency Management and a little email to the "right" people. The stuff that goes on above the legal 40, I don't have a lot to do with--until it gets to 10 meters. Then it is a different story. You might
think I am an a**hole, and that's fine. But it is NOT OK to walk around in my pasture, nor is it
OK to usurp frequencies I use for a legitimate purpose. Your hobby is NOT more important than
the life I am trying to save, the crashed plane I am trying to find, or the toddler that wandered off into the woods.

"All the more reason to know where one transmits. Intentional interference with communications of ANY professional nature should be dealt with swiftly. Ignorance is no excuse. It is up to the op to understand the "fallout" of his transmission.
No matter our difference of opinion, Jer, one thing you must admit, is most here that are vocal about their anti sentiments (so far) for the freeband know the least about the area of the bands, no?"

I would go with getting licensed and using Ham HT's..... 5 watts output on a HT with the rubber ducky replaced with more efficient antennas now sold for HT's will get you anywhere from 5-30 miles depending on conditions, terrain etc. I have worked simplex once on an HT almost 40 miles once. (surprised the hell out of me too!)

Depending on where you are, there "may" be repeaters within range also if help is needed.

According to some experts, people who log onto a computer network accept the risks of encountering inflammatory speech, because the Internet is a domain where talk is cheap and "flame wars"--or vitriolic exchanges among computer users--are commonplace.
In this digital age, there are no laws that specifically address hate crimes in cyberspace.

Hello Jerry: How ya doin there?

Gee whiz, wouldn't a shorted filament lower the filament voltage to
other tubes filaments, in parallel? Where they in series?

Maybe the filament failed and touched other elements in the tube????

Listenin ta Rock & Roll in the Great Mojave Desert, Jay in the Mojave,
.... just down the road ah ways from the fillin station.

B,
I'm a jeep owner for about 7 or eight years now and have played out all the scenarios you describe:) I wouldn't depend on cell phone now or in the future because the range really is very short. You just don't see all the cell towers since they're disguised often. I don't see cell one or sprint wireless maintaining a tower in the backwoods either. A CB probably won't give you that much range off your bumper even if someone were to listen. Nobody has ever (never) responded to my stranded pleas. Iridium, INMARSAT or some other satellite communication system would give good coverage for sure but I'm glad I was talking on someone else's budget even if I did have to hear, "Keep it short man. Just do it and get off." But, sure there are cheaper, more effective solutions.
A 2m radio will give you good coverage and there are folks who'll be on frequency at somewhat predictable times. A repeater at a distance will help out even more.
Then again, that time when I started a fire on federal property brought "rescue forces" faster than a .50 caliber sniper's bullet:)
Drink, WP3JQ

It doesn't work like that. A 0Hz magnetic field penetrates most
anything and microwaves are easily blocked, but that doesn't mean
low frequencies penetrate better, either. There are five basic
factors: Reflection; Dispersion; Refraction; Contructive Interference;
and Destructive Interference. Each factor is different for any
given substance at any given frequency. The characteristics of
the ionosphere are well known and somewhat predictable. Can you
say the same for trees? I did my homework, did you do yours?

We have some storage caves underneath us. Frequently the fire department will be called because usually someone has broken one of the overhead sprinklers. The FD always sends at least two trucks, and one of them stays at the entrance to relay the communications on 154.31 MHz.

A few years ago I heard of some spelunkers who had used a communications system down around 160 kHz or so. I can't remember exactly, but they were able to communicate with friends outside the caves.

I agree, The 270's (One Of them) I was using would hold 18 volts and move the bird forward to 3000 without losing any voltage. I was using a 3 pill for a driver.

Last night on TV I saw a program from Australia. Talking about what to do if you break down in the middle of nowhere, the need to stay with your vehicle, and the like. It's a real problem in the outback areas of Australia, particularly during the summer when the temperature approaches 130 or more Fahrenheit and there are areas where there isn't more than a vehicle or two every week. They mentioned the available of a FOR RENT (few dollars a week) satellite beacon transmitter that would broadcast through a satellite your position and need for help.

I assume that it is similar to the locator beacon that small aircraft carry.

I did not get the name of the device or details. (Yeah, reading the paper at the same time.) However what they showed was a fairly small and light device not much larger than an older HT. Perhaps it was to use vehicle power, I don't know. I didn't see any antenna involved.

I wonder if they're available in the Continental US???? In a REAL emergency it would be something that would be desirable to have.

Any pilots monitoring this who know about these devices?

HT to HT range should be in the range of 5 miles or more, depending upon terrain. Things get interesting when you add repeaters. A handheld with a small flex antenna should probably get you 10 miles or more into a repeater. From there, expect 30 to 50 miles or more to a mobile. With a gain whip (these can get fairly large. I'm using a 36 inch whip on a 440 HT), you shouldn't have problems out to 20 miles and more to a repeater (depending upon the repeater height and your local terraine). From my living room, I can use 10 repeaters on 440. Oh ... I forgot. The megaplex repeater system here in Rochester, NY. It has a number of 440 MHz ports, 220 ports, 144 ports, a 50 MHz port ..... and, yes, a 10 meter port. I have sat right here next to my pc and talked to Australia. Perfect, solid, FM copy. I hear England, Germany, the West coast of the US, Mexico ... you name it. And I can work it. With 6 'aa' alkaline batteries. What is the range of an HT? It all depends ....

Same reason FM broadcast doesn't fade when you go under an
underpass and AM broadcast does and why cell phones work inside
buildings and even in basements. It is because of the higher
frequencies and shorter wavelengths that let the signal get
through small openings such as doors, windows, cracks where it
even bounces around in buildings, whereas for longer wavelengths
much of the signal is attenuated as it attempts to pass through
small openings.

Gary Danaher wrote:

There is a sliver of a band at 73kHz and a band at 160-190kHz that
is used for caving. The low freqs penetrate the rocks very well, and
some of these radios use less than 1 watt (but have really long
antennas). Cable locating equipment works on freqs even lower.

Source record: 100720

Yep, the weather wasn't up to snuff and I had the day off. Result:
enough boredom to actually do this:

Between 26.000 and 28.000MHz, there are no less than 1585 ACTIVE
site licenses in the US for no less than 1100 individuals, large
corporations, small businesses, educational institutions, government
agencies, and emergency organizations. And that number -doesn't-
include experimental or general coverage sites. This information
is from the FCC's wireless communication database. There were about
a dozen or so sites within 26.96 - 27.41MHz, but were not included
in the count. These site licenses are good for only 10 years. Each
year, new ones are granted and old ones are renewed, just like any
other band.

Without any doubt, the freebander's argument that these freqs are
"abandoned" or "unused" is 100% bullshit.

That was a great idea, twist! Thanks!

Freebanders are the ultimate "problem operators". They apply
wacked-out reasoning (freedom, rights, civil disobedience, etc) for
just doing what they want regardless of rules or law. Some of them are
even using these loony excuses to invade 2 meters. Check this out from
QRZ:

Subject: 2 Meter Radio Sales and Lack of Licensing. ï¿½
Posted by w2wdx
Posted on Sat Sep 22 19:06:54 2001
From IP 24.184.139.90 ï¿½

I have noticed a marked increase in unlicensed operation on the two
meter band in the NY/Long Island area. This gave me idea to do a
little unscientific investigating.

Posing as an unlicensed person looking to buy a two meter radio, I
vistited 16 Radio Shacks on Long Island. I inquired into purchasing a
two meter radio with the sales staff. I was never asked whether I held
a valid Amateur Radio License.

I got the following results when I inquired about a license after
showing the salesman the notice on the packaging.

I asked, "Can I operate this radio without a license?", I was told the
following:

One salesman said, "Sure ... I do all the time. It's like cb radio".
Several other said that they did not know what amateur radio was.
Several more told me Amateur Radio was part of the "GRS".

Others said I only needed a ticket if I wanted to work repeaters.

Not a single salesman asked for my ticket and was willing to sell me the radio regardless. Many had no clue about Amateur Radio or that even a license was needed until I pointed to the notice on the box. Even more interesting was that several of these salespeople were the store managers, one of which told me he operates his two meter radio unlicensed. He does this all the time as a protest against the Federal Government impeding rights of free speech and encoraged me to do the same

Now my question is, isn't Radio Shack, being a manufacturer and distributer of HAM gear liable or regulated in its distribution of Amateur gear? Are there FCC rules it is responsible for following?

Hey...Now don't turn this into a thread about how crummy Radio Shack is....lets stay on topic. That is, limit the discussion on the responsibility of HAM gear retailers and it correlation to unlicened operators aquiring and using gear.

Many of those licenses are NOT for the purpose of communication. I have a site license that includes 11 meters for testing. We run radiated and conducted RFI/EMI/transient susceptibility testing on transportation equipment. The site has a screen room and our actual emissions levels (measured outside the room) are very low but the FCC still requires a license.

Helo Mike: You will get use to it.

Its a healthy thing having the antenna hits all the low lying things out there, let ya know your antenna is there so's ya don't blow out the finials of yer linear amplifier.

I also thinks its a FCC Rule.

The girl friend says "The antenna hits everything" I'll tell thats just me thinking bout U babe! Being a Big Strap doesn't come easy.

"Aaron":

You've made two assumptions that are simply not true:

First, you've assumed that Radio Shack makes their own radios.. They do
not. The radios are made by another company and RS slaps their name and
faceplate on them AT THE OTHER FACTORY>

Second, you've assumed that you need an Amateur license to purchase
Amateur radio gear. You do not. Anyone of any licensing stage can
purchase an FT-100D or an AR-147+, legally.

You did, however, make one point that should have been further explored:

The sales people need to be better educated about what they're selling
in order to better inform the public of the requirements to transmit on
the equipment they're buying.

Just my two cents.

-SSB

A good percentage of the freeband operators are licensed Amateur radio operators and have privileges on 2 meters. So how are they invading 2 meters? Listen to any of the CA or NY 2m repeaters - even the licensed operators make it sound like a CB free-for-all.

For (supposedly) not having a Amateur license you sure seem awfully concerned about the Ham bands. Oh I forgot - If you admitted to being licensed you could not maintain that "Aaron Voobner" is your real identity. Anyone who has paid attention here for a while knows who you really are and what you are all about. How do you decide which alias to post under? I am sure it is easier now since you have (cowardly) stopped posting under your real identity (for now). Why is it that the self appointed radio cops have to hide under a false identity?. If you are all for legal operation and the "law" then I would think that you would be proud to put your real name behind those ideas. You and QRM2000 aka YRAC aka K5PF should get together and compare notes. Notice how QRM free it has been in here lately?

Hello,
I am AARON BOOOOOOOBNER AND I HAVE NO LIFE!!!!
I get on the newsgroup to cause hate and discontent because I HAVE NO LIFE.I know that every one is aware of the rules but I continue to tell every one cause it is the only way I can get attention.Also it bugs them.I think if more people knew how much I enjoy talking and arguing with them they would ingnore me so I wont tell them about it.Well I got to go take a shower cause my crap stinks and as i sit and wonder what a big no life moron I am i feel proud that no one can ignore me well after my shower i think i will beat my pud to all the porn I post on this news group later AARON BOOOOOOOBNER

A good percentage of the freeband operators are licensed Amateur radio operators and have privileges on 2 meters. So how are they invading 2 meters? Listen to any of the CA or NY 2m repeaters - even the licensed operators make it sound like a CB free-for-all.

For (supposedly) not having a Amateur license you sure seem awfully concerned about the Ham bands. Oh I forgot - If you admitted to being licensed you could not maintain that "Aaron Voobner" is your real identity. Anyone who has paid attention here for a while knows who you really are and what you are all about. How do you decide which alias to post under? I am sure it is easier now since you have (cowardly) stopped posting under your real identity (for now). Why is it that the self appointed radio cops have to hide under a false identity?. If you are all for legal operation and the "law" then I would think that you would be proud to put your real name behind those ideas. You and QRM2000 aka YRAC aka K5PF should get together and compare notes. Notice how QRM free it has been in here lately?

Maybe you missed the part about not including the experimental licenses.
Why don't you look at the list for, say, a typical freq of 27.490MHz,
and see how many are for communication purposes. The answer is "most"
if not "almost all".

Yep, the weather wasn't up to snuff and I had the day off. Result:
enough boredom to actually do this:
Between 26.000 and 28.000MHz, there are no less than 1585 ACTIVE site licenses in the US for no less than 1100 individuals, large corporations, small businesses, educational institutions, government agencies, and emergency organizations. And that number -doesn't- include experimental or general coverage sites. This information is from the FCC's wireless communication database. There were about a dozen or so sites within 26.96 - 27.41MHz, but were not included in the count. These site licenses are good for only 10 years. Each year, new ones are granted and old ones are renewed, just like any other band.
Without any doubt, the freebander's argument that these freqs are "abandoned" or "unused" is 100% bullshit.
That was a great idea, twist! Thanks!

"Wellllll, it WOULD have been if you would have done what you originally claimed you were going to do. You were to contact these entities, not look at a chart. What hapened to that idea? As I said, start with the US forest service and move on to the petroleum companies. from there you can progress to the larger companies. Without any doubt, your argument is 100% garden fertilizer. Since you do not want to what you actually claimed you would do, I am done educating you. Some things you must do yourself. If you aren't going to do what you say, you are welcome to believe anything you wish. Thing is, whether you learn or not doesn't matter much to me. You claimed one thing and here you are claiming victory before you did the acid test. Just 'cause you say it, doesn't make it so. In any event, you are still incorrect for the most part."

from the users of CB radio equipment - intruderso...

Group: rec.radio.cb Date: Wed, Oct 17, 2001, 6:11pm From:
joxendi@bellsouth.net (Jerry Oxendine)
By virtue of USAF policy, I am not permitted to personally divulge any
USAF frequency in spite of
the fact that any civilian can obtain these in most of the so-called
"Secret Frequency" books. I WILL tell you this; The worst "freeband"
frequencies, the ones that give us grief are 26.615 and
26.625.

"Now we are actually getting somewhere. A blanket approach gets neither
side anywhere."

Our frequencies are above, below, and around that general area, and the
splatter is horrendous. Also, as to harmonics from military equipment,
you must know that the NTIA standards are MUCH tighter than those of FCC
and all military equipment,

"My point exactly, but certain individuals can't comprehend that many
folks have radios that are clean clean clean! Don't be so surprised that
it's not only hammies that can achieve the blissful, super clean status
of a military station, especially when some are running nothing but
commercial quality or military stations themselves."

including my own
IC706s must meet those standards or the station is NOT allowed to
operate there. Same way on
VHF. Certain amateur equipment mfrs do make high stability oscillators
as options for their
equipment, and there are certain mil spec mfrs such as Harris, Grove,
and Tait (VHF). I will be
obtaining a Tait in December because my VHF gear will "sunset" at that
time. Are we on those
frequencies 24/7? No. The 26 MHZ frequencies are like tools in your
toolbox. You might not
need your socket set for weeks. But when you DO, you expect it to be
there ready for use. So
you open your toolbox and discover that somebody has "borrowed" your
5/8" socket--the very one you need. The ONLY one that will fit. Now you
are PISSED big time because your tool is
missing.

"But it's NOT missing. It can NOT be compared to theft, it is NOT a
tangible object. If theft of a frequency was the issue, would not a
"theft" or at least a trespass charge be employed?"

Same way with 26 MHZ for CAP. We find a communications need and look in our
toolbox (the MUF) to find the "socket" (frequency) that will do the job. VERDAMMT! WAS IST LOS? Someone has borrowed our tool (frequency) and it is not available because that person
has stolen it, borrowed it, or whatever.
Now WE are pissed because we can't even use our own
tools.

"I understand your point, Jer, really, I do, but I asked you to forget those freqs for the sake of the issue. You are arguing a point which is preaching to the choir. I agree with you that certain freqs are to be avoided, that was never an issue. Let's cut to the chase. Are you also stating that there are no abandoned freqs in that bit of band?"

Now we must transfer that traffic to VHF or to another HF frequency that gets out long haul
where we "might" interfere with yet another search mission in another state. So, by not being able to use the ideal frequency in the instant case, the harm comes in several possible ways: 1) On VHF where the traffic load (tactical) is the heaviest by far we add yet more traffic that could've been handled on the low power 26 circuit had it been free of jabber, squeaks, squawks, and racket. 2) We now raise the possibility of having onlookers at a crash site that might interfere with the wreck-age by moving or taking evidence, or simply by being in the way until we can get law enforcement
there to make 'em leave. 3). In spite of coded traffic, victims' relatives
may be able to figure out
adverse news prior to procedures designed to deal with the family can be implemented.

"Well, I think this is a bit of a stretch, but I'll go with it. Worst case scenario of what COULD happen: Relative killed in some type accident, kin hear it before being notified. No safety concerns here, or harm done, and again, no victim. No victim = no crime. I won't even bother with who makes the "procedures" and standard prorocol when dealing with families. The govt has their own way, as does the airlines, as does Amtrak, etc. This is a rule of inconvenience/convenience at best, based on nothing to do with safety or welfare concerns."

4) Putting
the traffic on long range strategic frequencies where it will be broadcast all over the world when such is neither needed or wanted, and perhaps causing interference to OTHER emergency opera- tions that may require the use of said strategic frequencies. Not that it always will, but the direct
operations of illegal stations, OR the forced re-direction of traffic by an agency because of such
operations CAN cause the agency to interfere with itself while their forces in another area
attempt to exercise their band plans to deal with some other local

scenario.

"Yep, and anyone CAN have a heart attack at any time. Do we all pop nitro for it? Anyone CAN get struck by lightning. Do we avoid going out when it rains? We MAY get killed in an auto accident. Do we avoid cars? The probability factor MUST come into play in this flawed equation."

Finally, to address your questions about harm done on certain "freeband" frequencies, I somewhat
agree that in some cases there may not be any---especially if those frequencies are themselves quite
close to the band edges of CB. But what is happening that has caught the attention of ITU, and may eventually create an international ":incident", is the straying farther and farther and still farther of the so-called "freebanders".
They are boldly promoting export radios with the capability of operating from 24-32 MHZ--or at lease those who would peddle such wares to them---and people are simply using them.

"And those transgressors should be dealt with if they cause problems. Not IN CASE they cause problems. Speeding has always been freely analogized to this act, not that it's anymore accurate than the rest, but let's go with it for a second. It is up to the cop whether to pull you over or not. Then the discretion to give you a ticket or not is also evaluated. Let the crime fit the punishment...no victim, again, equals no crime."

Twenty-eight dot oh eight five sounds like channel 19 now, and quite frankly, if I had the permission and the means, I'd like to key down with a gazillion watt AM
transmitter and blank out every illegal idiot on there! Again, they are cutting across "my" pasture
and trespassing on "my" turf. But I cannot do that. If the freebanders will usurp forestry frequencies, then go onto 10 meters,

"So you throw the baby out with the bathwater? Indviduals MAY go on ten meter because they hear me on an abandoned petroleum freq? I seriously doubt that scenario. Even if that were to happen, as isolated as it would be, it is up to the operator to know where he is transmitting at all times.
Hell, Jer, using that analogy, you better clean that 2 meter band up real quick. If a newbie licensed hammie hears something like the Liberty net, they MAY go wild on ALL the other hammie freqs 'cause they think it's ok. Utter Balderdash."

then down onto 12 meters, then down to 17, where does it
stop? The asnwer is, it won't!

"This too, is BS, Jerry. Don't tell me how it doesn't stop, because I have been talking on the same freqs since the late seventies and I have no inclination to foray into your MARS freqs, VHF, or any other hammie freq. and most freebanders are polite, mindful, and considerate, even to

the point that I can listen to them all night and day and not hear nearly half the problems I hear on the staright 40 or hammie bands. It stops where it always has with most organized DX club freebanders. You are beginnig to sound paranoid that freebanders want your hammie freqs...trust me on this Jer, we want nothing of the sort. If we did, our ticket would be on display, we wouild think it made us "smarter" and we would be talking with other hammies on permitted freqs, but we don't, and we intentionally avoid the hammie bands like the plague. "

That is why ITU is addressing this issue--to draw a line in the sand and turn back the stampede of unlicensed intruders that is coming IF such is ignored. It is not only
the US that is affected by this; complaints are coming from all over the world. "tis just the way it is.
Jerry

"And we will roll with the changes, as we always have. I take no issue with your reasoning concerning hammie band intrusions, but not all freqs are used, and not all freebanders use dirty equipment. After 20 plus years of continual DX, the only problem I ever encountered concerning those activities are the cry babies right here in this forum. Nothing else, ever. And don't tell me it's luck, 'lest the entire American contingency of the Alpha Tangos, Sugar Deltas, Charlie Michaels, etc., etc.,have been riding one bitch of a wave of tremendous continual luck for over 30 years. I also understand your frustration that causes hammies to take aim at intruding freebanders.....no matter how incorrect that aim may be. You are absolutely correct defending "your" turf, if you truly believe that. My objection isn't with that point. Matter of fact, I have no objection at all, it's the direct opposite. It appears the same few are taking objection with my maintainment that I bother nor hurt no one while ragchewing on my fave DX freqs. The objections are all redundant and contaminated with personal prejudices and "what if's?"

From: joxendi@bellsouth.net (Jerry Oxendine)
TW,
Actually, I don't feel threatened. Perhaps I didn't state my case well. What I am trying to say is that we DO have it pretty well when compared to some countries who don't allow their ordinary citizens access to radio at all. I tried to indicate that, while the system isn't perfect by any means,
it is much better than the alternatives; either being forbidden to use a radio, or having NO regu-
lations at all. The latter would creat havoc. I DO get the impression from some posters that they
would, indeed, just love to get from under ANY authority whatsoever. And that would, of course,
make hell for all. NOBODY could use the spectrum and it would become another game of King
of the Hill just like on Channel 6.

"Hehehe...I take it you have objections to the bowl, but hey, that's cool, you don't have to go there. Judging by the sheer number of people that gather there, it is safe to assume that is is a very popular channel and obviously serves a great segment of cbers, like it or not. Perhaps you can relate to me why all the channels aren't that way since there is no enforcement difference between 6 or the other 39 channels, These other channels are not a game of "king of the hill," despite any enforcement and your claim of what "would" or "could" happen with no enforcement.
19 continues to serve me well on the road, but then again I have no small children traveling with me. I like cb the way it is just fine. It appears that the majority here that have the most problems with cbers and cb channels are hammies that wear their ticket on their sleeve, not the unlicensed cber or hammie that doesn't post his call."

Nice bit of selective editing. Here let me include the whole
Sentence for you

“In closing, I do love how these very same persons that are
accusing, people of freebanding, running amps, when you
do a google search on them, you will find that they, themselves
are just as guilty as the ones they are accusing. “

Now I’m not sure who you really are, but it really doesn’t
matter, you are making the biggest noise about it, so usaully
that person is the guiltiest.

Catch you later on the freebands Aaron

Why, just because I use AOL as my isp and google as
my posting agent, that's anonymous? Hey, at least you can
e-mail me @ radiofreeamericans@yahoo.com, the stuff I have
tried to e-mail you in the past three weeks keeps bouncing back,
how come?
Oh, I'm him now? Ok. I guess his paranoia of you being
all the people he accused you of is rubbing off. I have been
lurking here for about 2 months now, and it seems like you and
him have a hard on for each other. So now anyone that comes
out here not agreeing with you is going to be him, ok. You
can seek help for that type of abnormality, it's called counseling.

Well maybe not where you live, but in some
cites and counties, and even states there are laws on
the books concerning just this type of activity. Just
like child porn, new laws go into effect everyday concerning
rights and privileges of individuals. I’m surprised that
Dave (Dave & Debby fame) hasn’t rambled about
these subjects yet, oh well now maybe he will.

In your zeal to prove me wrong you went oin a totally wrong direction.

First of all, I didn't write that letter from QRZ. Secondly, you are zeroing in on the most irrelevant point of the whole issue. It does not matter who the actual manufacturer of the gear is. The issue here is the behavior of the retailer. Read the guy's letter.

> Second, you've assumed that you need an Amateur license to purchase
> Amateur radio gear. You do not. Anyone of any licensing stage can
> purchase an FT-100D or an AR-147+, legally.

No one is trying to stop little Bobby from buying the ham rig of his dreams six months before he passes his Tech license test. No one wants to prevent Jimmy's mother from buying him a new 2 meter rig for Christmas. Read the guy's letter again. The issue is not amateur gear being sold to individuals planning to get their ham license. The issue is amateur gear sold to individuals with NO CLUE and NO INTENTION of getting a license. How do I know that? Read the guys letter again.

Source record: 100809

I recently bought a Cobra 142 and have found that the previous owner cut R104, the modulation limiter. From what I understand, this is good for AM, but not SSB, which I enjoy operating.

Can anyone tell me if I should try to reconnect R104 for better modulation on SSB? If so, how should I reconnect it?

Wouldn't it be more considerate for the "user" to contact the "owner"
to obtain permission to "use" the frequencies? If the freqs are
'abandoned' and 'unused' then there should be no problem, right?

Just common sense.

1805. Newbie question about "skip"

Newsgroup: rec.radio.cb
Date: 2001-10-18 20:00:28 UTC
From: "Richard S. Smith" <rss@idiom.com>
Message-ID: <9qnccstqc1@news.idiom.com>
Source record: 100816

This isn't really a CB question exactly, but I was wondering about "skip", in particular, how AM signals (CB and broadcast) behave during daytime as opposed to night.

Everything I read about skip says that it's just a really neato cool way to talk to people far away, but in reality it seems like the normal CB 40-channel AM bands are just a lot noiser during the day, and not just because more people are out there talking.

Also, I notice when I'm driving at night I can pull in AM broadcast radio stations farther away (like hearing LA stations from the Bay Area). Now this seems to me to be the opposite of what "skip" is supossed to be.

I mean, it's like at night when the skip dies down, the more distant AM stations come in because they can be heard above the noise even though their power output is the same. But during the day when the skip is in, all the cumulative noise from all the AM traffic on whatever band you're in is all there as a low rumble in the backgrouind, which just means I have to keep my squelch up higher.

So, do I have it right or am I missing something?

Message-ID: <zLGz7.4937$B3.174169@e3500-atl2.usenetserver.com>
Source record: 100817

TW,

Just for the sake of argument, and in a friendly manner, let me ask this:
And I seem to remember making this analogy before.) Let's say, for
example, you buy a house with a very large lawn. In the
winter, you don't spend much time out there, but you happen to notice that
neighborhood kids are
cutting across your lawn and wearing a path in the grass. You ask them not
to do this, but they
continue to cut across the yard. You erect a fence, and they jump over it
and continue to cut
across your yard, and, finally, you have to call the law and erect a "No
Trespassing" sign to stop
them from doing this. Sure, you aren't "using" that part of the yard, but
does it not belong to you
to do with as you see fit? Let's also say that in the spring, you decide to
have a garden party on
the front lawn only to find that those kids have cut ruts and worn paths
across what was a beautiful
yard. Now you have to make costly repairs.

For another example, let's say that you purchase a nice piece of property
out in the country. It has
a lake stocked with bass and catfish, and a cabin where you can spend
weekends or vacations. You quickly pick out a great fishing spot, mark the
property "Absolutely NO hunting or fishing" and
return to the city and the daily grind. It is weeks, maybe months, before
you can get away to visit
your country getaway. When you do arrive at your country home, you find
that not only are people fishing your lake, but they have made themselves at
home in YOUR cabin. What harm did these
people do by making themselves at home on YOUR property? After all, you
weren't USING it,
right? What if you leave your residence to go on vacation, but return in 3
weeks to find that some-
one jimmied the lock, came in and made themselves at home--sleeping in your
beds, eating your
food, watching your TV, and using your electricity? What harm did they do?
After all, you weren't
USING your house while you were gone, right? Now tell me who wouldn't be
super pissed off to
find that all three of the above scenarios happened to one or more people?
And all 3 of them are
illegal, or become so when the owner of the property places restricting
notices around such as "No

Trespassing", "No Hunting or Fishing". Why are they illegal? Because the offenders are taking ad-
vantage of a situation (the absence or unavailability of an owner) to enhance their own well being or
pleasure at the expense of the owner. The offenders are stealing from the rightful owner or lessee
who has fulfilled certain legal obligations (purchase, lease, caretaker, etc) in order to have access
to certain properties. In the case of the residence, the offenders are breaking and entering and
stealing from the owner. The law makes NO distinction whether the owner was USING the property at the time--it is still HIS by virtue of his fulfilling legal obligations that the offenders have
not.

The taking of frequencies is no different. It makes no difference whether the licensee (owner, lessee) is "using" the frequency or not. A
"freebander" is stealing from the licensee in the same
sense as the above examples because he has broken and entered into an area where he has no
authority and no business. Now, if you discover a subject inside your house after an absence,
tell me, TW, you wouldn't be pissed off? You'd either call the law, beat the crap outta him, or
fill his arse full of buckshot in righteous indignation. How DARE that SOB break in MY house!!
That's no different. It's how I feel when I hear a bandit on OUR frequencies below CB. It pisses
me OFF, and I'd like to fill HIS butt full of buckshot! Just like another thread, those frequencies
are tools in a toolbox. Until needed, they are put away and might not be used for quite awhile.
But when I "look" in that toolbox, I expect that tool (frequency) to be there ready for use, free
from thieves. Have you got kids? I do. And I have had to get after her about going in my tool
box and removing tools and not putting them back. When I need a 3/8" socket, and it's not there,
then I'm stuck until I can locate it. When "freebanders" steal frequencies, the owners of those fre-
quencies (tools) must find a substitute. Maybe they DON'T use them often, maybe you don't
use your circular saw regularly, but you certainly expect it to BE there when you get ready to use it.
Likewise, the licensees of said frequencies expect them to be there when needed. It is still NO
different from breaking and entering an unoccupied house: both are illegal, and both are wrong.

> --
> ---
> Richard S. Smith
> ---

The only thing you are missing is that different frequencies behave
differently; those below about 10 MHz are nite bands and those above tend
to be day bands. This is why short wave broadcasters are all over the
Shortwave (or high frequency - interchangeable) spectrum over the course of
a day.

What is happening is an interplay of three different ionospheric levels (D,
E, and F) and the two things that drive them, the sun and solar activity or
'sunspots'. The D layer is sun driven and tends to absorb AM broadcast
(medium wave if you are European) when energized so there is no skip during
the day. This poops out at about 10 MHz. The E layer is the workhorse but
it is largely unknown; in the lo-VHF region of which CB is part, it will
give shorter skip near the solstices but 'sporadic E' can occur at any time.
The F layer is largely driven by sunspots and solar activity but also
responds to sunshine. Solar activity runs in a roughly 22 year cycle with

eruptions in each hemisphere of the sun on an 11 year cycle. It is the F layer that carries things worldwide. We are currently on the downslope from a solar peak.

Make any sense???

LOL!~

You're right--I don't go there. I put my little Realistic CB up somewhere and forgot what i did with it. However, I do listen to 19 while on the road to avoid wrecks, etc on my 706. I Don't xmit, tho. AS to the "bowl" I wouldn't stand a chance there! And whatever they want to do is fine with me--it doesn't affect my ability to find out what's going on on the road ahead.

Jerry
Twistedhed <twistedhed@webtv.net> wrote in message news:23180-3BCF03A8-23@storefull-121.iap.bryant.webtv.net...
From: joxendi@bellsouth.net (Jerry Oxendine)
TW,
Actually, I don't feel threatened. Perhaps I didn't state my case well. What I am trying to say is that we DO have it pretty well when compared to some countries who don't allow their ordinary citizens access to radio at all. I tried to indicate that, while the system isn't perfect by any means,
it is much better than the alternatives; either being forbidden to use a radio, or having NO regu-
lations at all. The latter would creat havoc. I DO get the impression from some posters that they
would, indeed, just love to get from under ANY authority whatsoever. And that would, of course,
make hell for all. NOBODY could use the spectrum and it would become another game of King
of the Hill just like on Channel 6.

"Hehehe...I take it you have objections to the bowl, but hey, that's cool, you don't have to go there. Judging by the sheer number of people that gather there, it is safe to assume that is is a very popular channel and obviously serves a great segment of cbers, like it or not. Perhaps you can relate to me why all the channels aren't that way since there is no enforcement difference between 6 or the other 39 channels, These other channels are not a game of "king of the hill," despite any enforcement and your claim of what "would" or "could" happen with no enforcement.
19 continues to serve me well on the road, but then again I have no small children traveling with me. I like cb the way it is just fine. It appears that the majority here that have the most problems with cbers and cb channels are hammies that wear their ticket on their sleeve, not the unlicensed cber or hammie that doesn't post his call."

> catergory do the radials put the antenna in?

Exactly...
The antenna is still a ground-plane antenna, which is a form of the Marconi antenna. Lowering the radials will increase the feedpoint impedance, but does NOT change the basic type.

Approximate impedances:
Dipole = 75 Ohm
Ground plane antenna ...
90 degrees angle = 36 Ohms
45 degrees angle = 50 Ohms

So if the radials are around 45 degrees, then the impedance should be near to 50 Ohm without matching. But an antenna impedance of 36 Ohms will give an SWR of 1.4:1, which is not too high (less than 4% reflected).
Some references are given below.

Leland C. Scott <Twistedhed-abuse@cotse.com> wrote in message
news:1%My7.20019$Gd6.443820@typhoon.mw.mediaone.net...
^
^ Sounds a lot like the drug business. Funny how you don't hear the yahoos
^ in this news group talk about that aspect of the pirate FM radio "hobby"
^ when the subject comes up.

That is because those people are pirates on the Broadcast band. They
make money out of "Pirate radio", it is BUSINESS, not a hobby, and so they
will do almost anything to protect their "patch". I hear that even the Hot
Dog traders in London can end up actually fighting over business.

In the UK, the laws are much stricter for pirates, the fines are many times
higher, and I believe that imprisonment is an option. In spite of how much
harder they can come down on a "Pirate", I have NEVER heard of the RA
classing an illegal CBer as a "Pirate".
So it would seem that the authorities and courts both agree that illegal
CBers are still CBers, not Pirates, and do not deserve to be treated as
Pirates.

--
^ They're totally convinced it "doesn't hurt
^ anybody", but it does. Talk about being naive.
--

CBers generally seem to get on, I have NEVER heard of these things
happening over illegal CB.

CB and Pirate radio are two separate issues...
CB = Hobby.
Pirate = Business.
CB = Costs Money.
Pirate = Makes money.
CB = 2-way radio.
Pirate = One-way broadcast.
CB = Meet people.
Pirate = Hide from people.
CB = Talk to other CBers.
Pirate = Transmit to anyone who will listen.
CB = Make friends with other station operators
Pirate = Kneecap other station operators.

Although not all Broadcast Pirates operate in the same way. There are those
in small towns that do set it up as a hobby. As they are not in it for the
money, they are no threat to other Pirates (if there are others nearby), and

so they do not have to worry about the violence. I have met some of these Pirates, and they were as friendly as anyone else you could meet... and no, they were not into drugs, just Radio and music.

But just think... If record companies are willing to give "back handers" out to the Pirate operators so their records will get "airtime", they must believe that enough people listen to them.

Regards,

Brainbuster.

> So is the real one dB/d or dB/i?

They are both real figures.
Any dB figure MUST give the reference... what is that antenna so many dB
better than. Do NOT trust ANY dB figure that does not give a reference.

dBd is the gain over a reference dipole
dBi is the gain over an isotropic radiator
dB on it's own is meaningless and totally useless.

As an "Isotropic radiator" only exists as a theory, any dBi figure must
either be theoretical, or calculated from the dBd figure.
So I suppose the answer to your question is that the most reliable figure
could be the dBi gain... assuming that they actually obtained this from
tests, and not theory.

--=--

Where have you been for the last few months??
I AM IN THE UK...

UK + EU CB Freqs: 26.965 to 27.405 MHz
UK only CB Freqs: 27.60125 to 27.99125 MHz
UK modulation: FM
UK antennas: Omnidirectional 5/8 wave max.

This is rec.radio.cb... NOT us.radio.cb

So you see, I can use the above frequencies, I can DX, I can use FM, and I
can use this newsgroup... all legally.
I just wish we could use SSB... Maybe one day, we have already got some
things we asked for.

Regards,

Brainbuster.

> a clean sheet of paper as they did in the mid-50s.

CB in most countries was probably based on the public image of US CB. It is
this public image of what CB is that became so popular outside the US, and
even made the British want to have one.
So our CB system was built around the idea of people just wanting to chat.

From what you have said, this is not what the US system was intended for, but
times change. I would have to agree that it would seem that the US CB system
needs to be re-thought, considering modern use and technology... not 50 year
old use and technology.

> QUESTION 1: Just who are the cast of characters? Truckers because their
> choice of gear is limited by the growing electronics already on the tractor

> etc. RC is gone, even the junk usages are gone. Even temporary car comms
> are better done on MURS, FRS, GMRS, etc. You know better than I, who the
> hell is left on 27??

So CB is now inhabited by a bunch of CBers :~)
We all know that you cannot mix Business with pleasure. There are now so
many other, more reliable and more private methods of communication now.
Using CB is like using a newsgroup... what you say becomes public knowledge,
and you never know who will break into the conversation.

> QUESTION 2: It is my oft-stated belief that any new system allowing AM
> is stupid. FM is far better mobile where SSB is certainly the way to go
> fixed. The RFI problem would nearly disappear if AM were outlawed. I am
> ready to outlaw it on the ham bands as well, at least 10 and 12 meters.
> Agree???

When CB was made legal in the UK, the public screamed (and cried) for "real" CB, like in the USA. But now that we have used FM systems, and we have seen that noise blankers have become obsolite, I don't believe that many UK CBers would want AM now. A few still use AM illegally, but I really have to wonder why they bother.
As for SSB, I am sure that many UK CBers would welcome an SSB system, even 4 Watts to match our FM power would give a great distance improvement over the FM system.

We still get TVI and RFI problems in the UK, the difference is usually the type of inteference. With FM, a buzzing may be heard instead of your voice. With TV pictures, the patterning is a constant level... but a constant fluctuation in patterning will give away AM users.
If the carrier was still set at 4 watts, then this could reduce the chances of problems (no extra power with mod).

You and I have both used FM, and know the differences from experience, if US CBers were allowed FM as well as AM, and so could make an informed choice, which do you think they would actually use?

> QUESTION 3: Just what is this new service supposed to accomplish? Not
> to be snide but what about the bowl, and the bozos with 500 channels??

When the RA allowed us FM on the same frequencies as your AM (and EU use), the AM use dropped even further. Now you cannot sell an AM CB in the UK, you cannot even give them away. It is possible for a change in the law to have an affect on the illegal users.
But in a free and fair society, you cannot prevent all crime. To do so would take away the rights of all citizens.

But surely something should change. You are allowed SSB which is great for DX, and then told that you cannot DX. This brings us to another question...

QUESTION 4: Do you think that they would drop the 155 mile rule, or drop the SSB use so that the law isn't so easily broken? Which do you think they should do?

Regards,

Brainbuster.

I should have said "out of CB" for the wrong reasons, and into it for
the right ones. I use my HF privileges for my DXing now, and CB for its
intended purpose. My GrantXLs sound just as good as ever.

I'm guessing, but we all have different ways of saying the same thing. Here, you give me a call (or land-line; ie; a telephone call) while I believe the British ring you up. I suspect that 'medium wave' would refer to medium frequency, and in its' broadest meaning, MF (medium frequency) would extend from 300 KHz to 3 MHz. Shortwave, I suspect, is another term for HF (high frequency) which extends from 3 to 30 MHz. VHF (very high frequency) extends from 30 MHz to 300 MHz. CB (11 meters) and the 10 meter amateur band are right at the end of HF and the beginning of VHF. How times have changed! Back when CB was formed in the 50s, it was hard to get a sensitive radio, let alone an inexpensive, sensitive radio. 440 MHz was really experimental. Now we take for granted our satellite television, cell phones, and our technology has no problem with tens of GIGAHERTZ!

That was a very nice description of what gives with the skip that Richard gave us. Next step, ground wave (and that does not exist at 27 MHz)!

It is certainly a band of frequencies under a common use which is what the
name means. It is also not the same here, assignments are are 10 kHz splits
thru 1700 from 540. I make the distinction because the Americas do not have
the longwave AM that exists in Europe; we clutter it with airport beacons.

I believe it was G.B. Shaw who observed that Britain and the USA are two countries separated by a common language. Then, course, there is Oz: is that aiy as in item?? It's aiy like in aiyble dahmit.

Perhaps the classic was the WW2 troops following the Brooklyn Dodgers before they moved to LALA land. Out of nowhere in polite society would come 'Dem Bums' from the Yank who had no clue about its use in Britain or Oz.

I will defer to your knowlege of sheep even if the EU calls half of them goats; the OMA on my address is Omaha NE. In this part of the world, things moo. Besides, when my dad got back from his extended camping trip with the Japanese, the edict was issued: No Spam and if it had been within 100 miles of a sheep it doesn't get into this house. To the pc police, I am ovine-deprived if not ovinophobic.

I wouldn't worry about it. The radio has a
front panel mic gain control. Modulation
limiters are for guys who don't know how
to properly set mic gain controls. Don't
overdo the mic gain and you won't have a
problem. Keep in mind that ALC circuits
(SSB modulation limiters) create their own
form of distortion that is often audible and
has a detrimental effect on spectral purity.
The cleanest possible signal is achieved
when there is no overmodulation OR ALC
distortion. That situation is arrived at by
disabling the ALC circuit so that it can't
attack a less than 100% modulated signal,
and by proper adjustment of the mic gain
control.

I am surprised you do not have a 250 klick rule. Some countries actually require one of the participants to be mobile. This is almost inherent with Land Mobile communication which is where we hid it under the treaty.

When international communications takes place, there is a whole new kettle of fish. In the amateur rules at least, the treaty forbids what is called 'communication on behalf of a third party' in paragraph 1 and allows countries to agree bilaterally for it in paragraph 2. These rules are basically non-existent within the US and the Americas but are enforced big time in countries with state telephone systems. Israel for sure and Jordan I believe have 3 rd party agreements with the US but they are close to unique in Africa and Eurasia.

I used to contact regularly a G4 in Lancashire, he said Wigan but it was really Upholland, and in fact shared visits with him. At no time could he put his wife on the mike -- she is a third party. It's long and it's strong and it goes nowhere, you can see it when the weather is clear. If you're of the mind and you've got the time, you can spend a lovely day on Wigan Pier.

Which simply says to most US amateurs, don't run patches outside the Americas and never in a language you don't comprehend. And don't let your kid say Howdy when you are DXing.

Probably not insurmountable but that is why the no-DX rule.

Dick

Well, I didn't see too many petroleum companies in the list, and not
too many forest service freqs, either. Actually, I didn't see any.
There were, however, a lot of news/entertainment media corporations
listed. Even a couple CB shops. Where did you get your information,
twist?

As far as contacting these people, it will happen. I just don't have
the ability right now to look up the contact info for 1100 people
and email them all, and all in one day. Rest assured, twist, many
of them will be notified, and there will be some response. But the
response may be to the FCC, so I won't be able to post it here. Just
keep on giving me more great ideas like this one, would ya?

It really is too bad they can't do that. For example, someone brags about the joys of putting 5 kilowatts on channel 6. I comment (as is my right) on how stupid I think that is and refer to the illegality of it. Instead of ignoring my comments these bozos invariably launch into a loony diatribe about how the Constitution allows them to break laws and how much better they are than the average CBer because they have lashed a bunch of alternators together with bus wire.

What I meant is a mode, a lot of people think AM is one frequency an FM
another, not realising that people can transmit or receive on AM and FM at
the same frequency.

You are correct but the 540-1705 segment has been called AM for so long that
it tends to be taken as that band. In fact, the original poster did so.
Drives Euros over the wall.

OK I see - in your screwed up logic you think I am a hypocrite for not mentioning the people who you are against. If you and Voober have such spotless reputations and stand for anti-piracy as well as "lawfulness" why don't you use your real names? Why do you self-appointed radio cops continue to hide just like those "nameless criminals" and those who "push RF piracy"? Being the law abiding citizens that you are you should stand up and be identified with your lofty ideals under your real identities. Seems to me you and those other people you mention are from the same *cowardly* lot. I know why Voobner can't post under his real identity; doing so would erase any hope of credibility for him. How about you? You're not a hypocrite, are you?

Another case of the Pot calling the Kettle black. Why don't *you* ignore their comments about "putting 5 kilowatts on channel 6" and spare this newsgroup the continued noise? You want to *appear* as if you take the high road so why don't you just ignore their comments? Never mind I already know the answer to the questions - you get your jollies and the attention that you crave from trolling this newsgroup...

Of course if they are stupid enough to do something like what Mopar proposed, which makes the activity really stand out, and thus easier to document for FCC enforcement activity, they get what they deserve.

All I have to do is merely mention that Tim Nepo is bootlegging on the ham bands with a stolen callsign etc. is when I get flooded with private E-mail from him protesting the comment, and saying it's not true. Well if it wasn't true I can't see why he's so worried about it. It is just totally unbelievable that a CB bandit, and illegal freebander by his own admission, who is on record about caring less for Part 95 rules, now all of a sudden switches his horns for a halo when Part 97 rules rolls around? Not in a million years. He has no creditability due to his on the record remarks regarding his attitude towards FCC rules of any kind.

Tim is already on record, including his old web page set up, showing his modified Yaesu FT-840 HF rig, and bragged about using it on 11m. For HF bootlegging all he needed was a simple dipole cut for his favorite Ham band, spin the VFO knob, and he's in business.

Did you know that he even sent me an E-mail claiming it's not his fault the rig will work on 11m. He's so screwed up with his pirate mentality he really suggested it was some how Yaesu's fault that the rig works there. Yeah, right, the screws fell out of their holes and the soldering iron levitated itself around the rig modifying the solder blobs, which controls the rig's band programming lock out ranges. OR the rig pops right out of the box 11m and Freeband ready for all those lucky illegal CBers out there. Of course he forgot about getting found out by some of the others members of the news group that he was trying to sell the rig as "unmodified". I would like to see him produce any documentation showing that rig being used for 11m legally, and how to order it 11m ready from the factory.

Hmmm, are you getting a little upset? Seems a little of your real personality is leaking out from behind the "Aaron Voobner" curtain. It harkens back to the old days when you were posting more nastiness under your real name (before you had to hide like a coward to try to maintain any credibility). LOL!

You mean QRM2000 aka YRAC aka K5PF? As far as K5PF - he is a hypocrite who (like you) purports to be against illegal CB (like you) but has a few skeletons in his closet (like you). He must post under various aliases to hide his identity (like you) and to make it appear that there is more support for his opinions than what really exists (like you). He must cowardly (like you) hide behind various aliases (like you) because no one would find him credible if he posted under his real name (the same situation as you) - not that you are credible under your nom de plume "Aaron Voobner" either. LOL!

Now back to the original question - why are you such a coward?

(wacky "k5pf is satan" rant snipped)

Woo hoo Phil, you are as bad as Twistedhed when he gets wound up. Although Twist can beat you when it comes to being prolific. He can go on for PAGES. Still, not bad. I just mention K5pf and off you go. It's like pushing a button.

>Now back to the original question - why are you such a coward?

I will agree to answer any question you wish to your satisfaction but first I want you to do something for me. Go to my family home page and read through it again. Then see if you can't at least try and locate me on some public database. I kept telling people they were not trying hard enough, and that's what I think is the case here, Phil, you're simply not trying hard enough. I assure you that I am Aaron H. Voobner and any dolt with a computer who is willing to apply themselves can find me registered as a voter in my home state as well as on tax records that probably go back years.

Talk to you soon,

-Aaron-

> Phil C

Phil, I do indeed post under my real name. I just don't give out my
address. The reason for that should have been obvious when a few of
the keyclowns decided to post what they thought was my number (they
got it wrong, and then posted another wrong number -- hehe) with
uninformed suggestions on how to call several times a night and not
be traced (it didn't work). Then there are the threats...

Now in your anti-Voobner campaign, maybe you should look at some of
the spam and porn that has been attributed to him. If you do some
tracing, you will find that the really offensive stuff didn't come
from him or any other anti. It came from a keyclown troll attempting
to discredit pro-legal voices in this ng. Before you go around slapping
labels on people, maybe you should look at both sides of the issue.
Many people here seem so hell-bent on condemning Voobner that they
ignore the facts and attribute all the ng ills on him. The facts are
he doesn't do anything worse than anyone else, and neither do I. If
you don't like it, then you need to point the finger at your own bias,

because that's where the problem really exists.

Do you have a URL for the UK RA? The DX part of your statement above I would like to check out in the regulations for myself. Plus I would bookmark it for future reference. Never know when I may get a chance to go to the UK on a business trip and take my QRP rig with me for fun. Knowing the regulations there is a must to operate legally.

> traffic going on much less any life or death traffic.

Regardless of what you wanted to hear for the past ten years, I worked several years in commercial two-way radio, and I have been in the field of radio communication for about as long as you have been alive. Those freqs are indeed being used by the people that paid money for the legal right to use them. They may not use them all the time, and some freqs "seem" at times as if they have been abandoned. But even if they never transmit a single word for the ten years they have the license (unlikely), the freq is still there for them to use if they so choose.

BTW, you should also notice that most of the legal users are licensed for FM, so if you were only listening AM (as I suspect, since you are an admitted freebander), then your ten years amounts to zip. Also, if you are listening to a band with several conversations, it's not easy to pick out who's legal and who's not (unless you are talking to the saucer men).

Maybe you should just stick with the porn, and leave the discussions about radio to those that know what they are talking about. Know what I mean, Timmy?

1870. Base Station Lightning Protection

I just replaced my base antenna, from a 15 yr old Big Stick to a new Solarcon Imax 2000 mounted on a 15 ft mast bracketed off the side wall of the house. I have the mast grounded to grounding rod with #10 copper wire and planning to install a Polyphaser lightning arrestor on the coax between the radio and the antenna.

I live in an area that has very few lightning storms, maybe 3 days per year total.

Wondering how other folks handle their lightning protection if at all.

Around here, all lot of people tell me it's not necessary.

Typical cowardly reply. So you are saying that you are from the same cowardly lot as those you oppose? You use the same techniques - you are cut from the same cloth. Do you not see this?

Another one of your hot buttons. Mention your deception under your alais
"Aaron Voobner" and you get all wound up. Must be a reason - and not the
reason you want everyone to believe.

The fact is that you are a coward who (like the "illegals" you drone on
about) must hide his identity. You have no credibility here. Obviously
you have no problem with being disruptive (one of your personality traits)
on the newsgroup while hiding under the alias "Aaron Voobner" - why would
anyone believe that you would not be as disruptive on the CB band or the Ham
bands as well?

<nonsense snipped, noise filter applied>

Still going on about your identity huh? A hot button with you...

Posting under even 1000 different aliases still cannot hide certain
unconscious personality traits that continue to leak forth in your postings
under "Aaron Voobner" or your other aliases. Even the "lazy" people that
you go on about can see through your deception. You are not fooling anyone.
You are not credible.

So why are you such a coward that you have to hide behind the alias "Aaron
Voobner"?

You sick fuck!
Do you really think that God (yes, we do both believe in the same God!) would find you honorable to kill 6000 innocents? Women? Children? Even the men? They were not soldiers! They were murdered by YOUR people. They were murdered by your belief, allegedly, when your faith preaches against murder. You are supposed to be "the peaceful faith" How can you justify murder? I'd like to meet you, no I'd love for the family members of those you and your "faith" murdered on Sept. 11. Will you be surprised to find yourself in Hell for your "beliefs"?
Osama is no better than Hitler. But maybe you find that to be a compliment, seing as you see Jews to be rats. No people as a whole are equal to rats, rather individuals are, such as you. Like rats, you come out of your hole to attack, then retreat when noticed. Hiding, breeding, feeding.
You will be found. And then may God have mercy on your soul!
Signed,
Bill Madary

Hmmm, saying that you are against "keyclown" behavior is one thing.
Everyone knows then where you stand. But are you surprised when you are
threatened after your (some of the AKCers) campaign of harrassment against
the "keyclowns" (as you like to refer to them)? After all, in your view
they are all criminals.

> Now in your anti-Voobner campaign, maybe you should look at some of

"Voobner" did not post the spam and porn but the man-behind-the-curtain
(Voobner's real identity) has posted plenty of offensive stuff.

> Before you go around slapping
> labels on people, maybe you should look at both sides of the issue.

You have made the erroneous assumption that I am on the side of the
freebanders and other "illegals" as you self-appointed radio cops like to
call them. It seems that you label anyone who disagrees with you a
"keyclown". This belies your obsession with them.

> Many people here seem so hell-bent on condemning Voobner that they
> ignore the facts and attribute all the ng ills on him. The facts are
> he doesn't do anything worse than anyone else, and neither do I.

Ok I see. You are saying that you and "Voobner" = "keyclowns" in your
techniques. Therefore you are not better than them (worst actually because
you want to appear as superior to them). If you
self-appointed-radio-cops-who-have-taken-the-high-road have no problem with
posting disruptive garbage here on the newsgroups and elsewhere then why
would anyone believe that you would not exhibit the same disruptive behavior
on the CB band or the Ham bands? Isn't that what you say that you stand
against? Every time you lower yourself to the level of those you are in
opposition with you lose more credibility. Being the law abiding and
upstanding citizens that you are I would think that you radio cops would
want to be above such behavior.

So because the above names that you mention all are anonymous it means it is OK for you too. Using the same tactics as those you oppose makes you no better than them. And besides, in the AKCer's estimation they are all criminals - why would you expect any other behavior? Seems to me you are a hypocrite when you use the same techniques and behavior as those you speak out against. If you want to take the high road your behavior should be better than theirs. But it is not so you suffer from the lack of credibility. All of your posting are then reduced to just more noise...

>> Next step, ground wave (and that does not exist at 27 MHz)!
>
>Sure it does. How else would anyone communicate across town, NVI propagation?

Ground wave exists at all frequencies! One day from Kansas City, I saw the telltale signs of propagation opening up. I started watching some TV stations from Springfield, Missouri (about 95 miles away), and that "skip" went clear up to the UHF stations. They were coming in as clear as locals, what we would call "studio quality." That's a lot of skip, although it may have been "ducting." I used to work at channel 27 in Springfield, and one day we got a call from a woman who was complaining that our signal was weak. Turns out she was over 100 miles away, down in Oklahoma. We were surprised that she could get us AT ALL, much less weak.

Subject: Motor / Radio noise
Date: 16 October 2001 09:24

I am getting a huge amount of radio noise when transmitting with the motors
running, the receiving party can only hear what sounds like a swarm of bees.
I use a Uniden 1020 radio and have 75 mercury outboards on the
boat....anyone else had similar problems???
I have a detailed report of things we have tried to eliminate this problem
(without any success) and will happily share it with anyone interested.

: Wondering how other folks handle their lightning protection if at all.
: Around here, all lot of people tell me it's not necessary.

Yeah, if you really care about your home and equipment, it's necessary.

Companies like Polyphasor make great quality lightning arrestors which work very well. You will often find them at commercial radio sites. Cost is about $5 to $175, buying one used at a ham/commercial radio swap meet or new from Polyphasor.

cheers

AMATEUR RADIO NEWSLINE(tm) REPORT #1262 - OCT. 19, 2001

Amateur Radio Newsline report number 1262 with a release date of
Friday, October 19th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The International Amateur Radio Union speaks out on Morse and the ham radio community responds. This story is first on Amateur Radio Newsline report number 1262 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL: IARU MEETS - MORSE ON ITS WAY OUT

The International Amateur Radio Union meets to discuss the future of our worldwide hobby service including the Morse code. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

The Administrative Council of the International Amateur Radio Union met between the 6th and 8th of October in Guatemala City. The principal business was to continue preparations for WRC-2003, which has several items of importance to the amateur services on its agenda.

Items discussed he harmonization of amateur and broadcasting allocations near 7 MHz; adequacy of HF broadcasting allocations below 10 MHz; possible revision of Article S25 of the international Radio Regulations; changes to terms and definitions in Article S1 as a result of amendments to Article S25; review of provisions concerning the formation of amateur callsigns in Article S19; additional allocations for 'Little LEO' satellites; study of a possible allocation to the earth exploration-satellite service for synthetic aperture radar near 435 MHz; and possible identification of globally harmonized frequency bands for use by agencies and organizations dealing with public protection and disaster relief. The IARU objectives with regard to these agenda items were affirmed.

The IARU Council adopted a resolution urging member societies to seek, as an interim measure, Morse code testing speeds not exceeding five words per minute. The IARU Council, setting aside previous decisions, resolved that IARU policy is to support the removal of Morse code testing as an ITU requirement for an amateur license to operate on frequencies below 30 MHz.

Jeramy Boot, G4NJH.

--

The next scheduled meeting of the IARU Council will be in September of 2002, immediately prior to the Region 1 Conference in San Marino. (RSGB)

**

CW: HAMS REACT TO IARU DECISION ON MORSE

The IARU policy decision to support the removal of Morse code testing as an international requirement for an amateur license to operate on frequencies below 30 MHz is again sparking a hot debate. This, between those who favor retaining mandatory Morse testing and others who want to see an end to CW as a requirement to operate the high frequency bands. There is really nothing new in the arguments on either side. Amateur Radio Newsline’s David Black, KB4KCH, has more:

--

Morse code. Most hams love it or hate it.

CW, as it's also known, was developed for land based telegraphy in the early 1800's by Samuel F.B. Morse. Morse code and ham radio have gone hand in hand ever since. But now, CW as a requirement for a ham license may be going away.

The International Amateur Radio Union Administrative Council has taken the first steps. Less than two weeks ago, the group voted to set aside any previous decisions and support removing Morse code testing as an ITU requirement for hams to operate on frequencies below 30 MHz. In effect, that move seems to suggest there's little chance that the IARU will support keeping Morse testing as a requirement for getting a ham radio license.

Long time CW operator Jerry Womble, WA4QIN, of Steele, Alabama, says losing code as a license requirement would not be good for the amateur radio service.

--

Jerry Womble, WA4QIN: “If you remove code from the process of getting' a ham license I think you dilute the talents in the community, and I think it means a little less to the person who actually gets the license that he did not go through a process that most of us have gone through to obtain our license”
--

But that view is not universal.

--
Jim Baker, N4RVH: “It wouldn't bother me if they did remove it”
--

Birmingham resident Jim Baker, N4RVH, says ham radio would continue just fine without Morse code as a license requirement.

--
Jim Baker, N4RVH: “Radio is gonna to continue and its gonna progress beyond that. With what the technology is getting into now it is going to far surpass what the code started out to do and that's to communicate.”

--

These people are the middle grounders. They welcome an open exchange of viewpoints but they also know that they must accept the judgment of the service's political leaders and the world body of telecommunications regulators.

One side or the other will lose, but both sides will eventually have to live with whatever the final ITU decision on Morse code testing turns out to be.

From Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

The bottom line. Regardless what’s decided at the next World Radiocommunications conference, not everyone in ham radio is going to be happy. (ARNewsline™)

**

CHANCE FOR A RARE CONTACT: GHANA COMING TO 6 METERS

Its considered one of the rarest of the rare countries on VHF, but now Ghana is coming to 6 meters. This with word that a group of DXers will be operating from the city of Elmina from Friday, October 26th through 1700 UTC on Sunday, November 4th.

Arliss Thompson, W7XU, Richard Hanson, K5A-D and Ed Gray, W0SD are the expedition leaders. Thompson says that the group plans on using the call sign 9G5SIX. And while they will have the capability of operation on 160 through 10 meters they will concentrate mainly on operating the 50 MHz band both C-W and SSB.

As to gear, Thompson says that the station dedicated to 6 meter operation includes a pair of Yaesu FT-100D transceivers, a 3CX800 amplifier and a 7 element yagi on a 27 foot boom. A Icom IC-706 transceiver and loop antenna will be dedicated to monitoring 28.885 MHz on 10 meters. This is the internationally recognized frequency used by 50 MHz operators to plan 6 meter D-X contacts.

And to let everyone know if the signal from Ghana is on the air, Thompson says that they will establish a beacon on 50.106 MHz. If you hear it, there is a better than even chance you can tune up the band and make contact directly with the D-X pedition itself.

As to the High Frequency bands, Thompson says they will use a Yaesu FT-746 with Acom kilowatt amplifier feeding wire, vertical and loop antennas for 160 through 10 meters. That station will be primarily manned by W0SD. QSL information will be released at a later date.

We will have more D-X related information at the end of this weeks Amateur Radio Newsline report. (VHF Reflector)

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Reading Amateur Radio Club's W3BN Repeater serving Reading Pennsylvania.

(5 sec pause here)

**

AMERICA FIGHTS BACK: A NEW EAS STRUCTURE

As reported last week, the Emergency Alert System or EAS was not activated before or during the terrorist attacks on the World Trade Center and the Pentagon. Instead, President Bush chose to use the commercial media as a way of informing the public. And shortly after the attacks the FCC suspended the need for regular tests of the EAS system for a short period of time, presumably so as not to cause panic in the general public that another attack was taking place.

Does this mean that the EAS need restructuring or modification? Richard Rudman, W6TIA, is the chairman of the Emergency Alert System National Advisory Committee. He says that its time to look at future technology and how it can be incorporated into the E-A-S system to better serve the American public.

--
Richard Rudman W6TIA: "Where I really hope we can take this is to look at something that my national advisory committee already is studying under the heading of Advanced Warning Systems. Amateur Radio operators are already familiar with them because we have been doing this for years. We have a lot of advanced warning systems."

"We need to look at the capabilities of technology are, what people are going to have for personal communications devices in the future and come up with some intelligent ways to allow people to program their devices so that they can get alerts to the hazards they want to be notified about, in some cases 24 hours a day, 7 days a week wherever they are."
--

From Rudman's comments it appears as if the concepts developed by ham radio operators along with overall advancements in personal communications technology could play a role in the future of the Emergency Alert System. Translated into everyday language, it means saving lives. (ARNewsline™)

**

AMERICA FIGHTS BACK: BAYGEN RADIOS DROPPED ON AFGHANISTAN

Radio has become an important tool in the United States military campaign in Afghanistan. In addition to its on tactical communications, the United States air dropping wind up radios to the Afghan public. Amateur Radio Newsline's Bruce Tennant, K6PZW has the details:

--
For more than two weeks the United States and its coalition allies have not only been dropping bombs and food ration packs into Afghanistan. They have also been air dropping a new secret weapon in their war on terrorism. The world famous Bay-Gen wind-up radio.

According to the British Broadcasting Company on-line service, Americans forces have reportedly also been air-dropping hundreds of the small Bay-Gen Freeplay wind-up radios into Afghanistan as the first step in what promises to be a battle for the hearts and minds of the Afghan people. The radios are thought to be specially designed fixed-frequency models that will automatically tune to information broadcasts issued by the United States military.

The BBC says that Washington is relying on the work of its renowned Commando Solo broadcasting unit to reach Afghans over the airwaves. The six EC-130 planes that make up the Air National Guard's Commando Solo fleet serve as flying radio stations. The unit has a record of operating in U-S conflicts such as those in Panama, Bosnia and Haiti. And in addition to the efforts by the U-S military to air-drop radios, relief agencies are also working to supply commercial wind-up models to refugees, many of whom have fled their homes because of severe food shortages in Afghanistan.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.

--

The BBC on-line article says that the wind-up radios will be used to publicize food drops and the message that "the people of Afghanistan are not the enemy." The article also quotes journalist Nick Grace, of the website Clandestineradio.com who believes the Commando Solo unit is also involved in jamming the Taleban-run station Voice of Shari'ah. (BBC)

**

HAM RADIO AND THE WAR: TERRORIST ATTACKS CAUSE 2 METER BEACON DELAY

The terrorist attacks in New York City and the Pentagon caused a new ham radio beacon to be delayed. This, according to Tim Marek, K7XC, who was getting ready to put one on 144.288 MHz from Northern Nevada when the attacks on the East coast occurred.

Marek is a Radar Tech on the Naval Electronic Warfare Range in Nevada and he says service to the nation came first. In a posting to the VHF Reflector, Marek says the Navy compressed a four week pilot training event into two weeks. As a result he wound up working 18 straight days of 12 hour or longer shifts helping to train US pilots for their missions.

This task completed, Marek, has finished assembling the new beacon and has K7XC slash B running 10 watts into a Ringo Ranger from his home in grid DMZ09. He hopes to find a mountaintop location and a horizontal antenna for it in the near future. A 432 MHz beacon at the same location is in the works as well. (VHF Reflector)

**

HAM RADIO AND THE WAR: HEALTH CONCERNS CAUSE CQ TO ASK CONTESTERS TO E-MAIL LOGS

This is Rich Moseson, W2VU, Editor of CQ magazine, with a message for anyone planning to participate in next weekend's CQ World Wide DX Contest, or any other CQ-sponsored contest.

Because of security concerns, we are asking everyone who submits a log for our contests to do so by e-mail. The rules for each contest give you the appropriate e-mail address. Logs received through the mail at the CQ offices will be held unopened until all potential health risks have been evaluated. We cannot guarantee that these logs will ever be opened.

We know this will inconvenience a small number of participants in our contests and we regret the need to make this request. But our logs come from all over the world, and even from Trenton, New Jersey. And while the risk that amateurs might be involved in any sort of terrorist activity is very small, mail en route may be subject to tampering. We cannot ask our staff members or contest committee volunteers to possibly expose themselves to dangerous packages sent through the mail when there is an alternative.

We've already received several e-mail messages critical of this request, suggesting that we are giving in to terrorists. We don't see it that way. We are not canceling the contest. But we are taking reasonable precautions to protect our staff from what is, based on this week's news, a very real and fast-growing threat. (CQ Magazine, W2VU)

**

ENFORCEMENT: PART 15 VS HAM RADIO

Interference to a Washington state two meter repeater has been traced to a legal albeit faulty Part 15 device. The Portland, Oregon FCC office recently investigated interference to the Clark County Amateur Radio Club repeater in Vancouver operating on 147.84 MHz. The interference was traced to a Gemini model V C 2000 Part 15 video transmitter located about one mile away. The owner was contacted and voluntarily removed the device from service. Interference gone. Case closed. (Portland SBE Bulletin)

**

EMERGING TECHNOLOGY: SATELLITE RADIO VS. RF LIGHTING

A major battle has developed between the deliverers of satellite radio and a company that will soon manufacture R-F lighting. This, as XM Satellite Radio and Sirius Satellite Radio ask the FCC to reduce the level of allowed emissions from a particular new model of outdoor light bulb to reduce potential interference to satellite delivered radio signals.

The trade publication Radio World reports that Sirius and XM have specifically asked the FCC to require that Fusion Lighting lower the bulbs radio frequency emission levels y 99.9% of current levels. According to Radio World, Fusion's R-F lamps are designed to operate in an unlicensed portion of the microwave spectrum. Unfortunately, the lamps hold the possibility of interfere with S-band communications channels used by satellite services.

But Fusion says that granting the request would be undue overegulation and effectively put the company out of business. They say that the microwave powered lamps are still in development and at least a year from commercial sale.

Reportedly, the FCC has already spent several months trying to resolve the dispute. So far, no resolution. (Radio World)

**

EMERGING TECHNOLOGY: PAY TO LISTEN TO OLD ART BELL RADIO SHOWS

If you are a fan of Art Bell, W6OBB's, "Coast to Coast A-M" radio program and you miss tuning in one night, its going to cost you money to hear a repeat of the show on the world wide web. This, after Premiere Radio Networks announces that as of Monday October 15th there will be a fee to access old shows.

According to the Premiere announcement the longtime free audio streaming has disappeared and has been replaced with a new $6.95 a month subscription service called Art Bell's StreamLink. With StreamLink you can listen anytime you like to any Art Bell Show from the last 30 days.

Not everyone is happy with the decision to charge including Bell. According to a posting to his website, it was not his decision to change the free Internet access. Rather it was a decision made by Premiere based on cost.

Bell says that there are now millions of people on the Internet and bandwidth costs money. About $1.5 million per year for all the Premiere shows. He says that Premiere hopes to break even.

W6OBB says that he has been receiving many angry e-mails and that he understands the anger at having to pay for what was free. But he also understands the company cannot continue to cover the ever growing cost.

Bell adds there is at least one bright spot. Says W6OBB, "it is still free on the Radio."

More information is on the web at www.artbell.com. (Art Bell Website)

**

SPECIAL EVENTS: JOTA 2001 AND THE ISS

If you are hearing this newscast between 0001 local time on Saturday, October 20th, and 2359 local time on Sunday, October 21st, then as soon as its over get on the air to contact the Boy Scouts Jamboree On The Air 2001. Several hundred thousand Scouts and Scout Leaders and others are expected to be on around the world for this annual event.

Listen for scouts on 3.740 and 3.940 on 75 meters, 7.270 on 40, 14.290 on 20, 21.360 on 15, 28.390 MHz on 10 plus the WARC bands.

And as a special added attraction, International Space Station Commander Frank Culbertson, KD5OPQ has said that he will try to make some general QSO's for the scouting Jamboree. He will operate on the usual ham radio space to ground

frequencies. Because of Culbertson's limited time on the air, non-scouting stations are being asked to give preference to scouts trying for a contact with KD5OPQ on board the ISS. (Q-News, SAREX Remailer, K6DUE, KC6ROL)

**

BREAK 2

From the United States of America, we are the Amateur Radio Newsline, with links to the world from our only official website - www.arnewsline.org.

(5 sec pause here)

**

OUR HERITAGE: RADIO PIONEER DONALD HINGS

Tom Farley, KD6NSP writing in the CGC Communicator notes that he is always trying to publicize radio pioneers that have not been written about. One of these is Donald Hings whom Farley describes as a Canadian wireless inventor who came up with an early form of the walkie talkie and played a big role in the Canadian and British war effort.

Unrecognized compared to people like the late Al Gross, Hings was recently presented with the Order of Canada by her Excellency, the Right Honorable Adrienne Clarkson, the Governor General of British Columbia.

His granddaughter has built a nice web site to honor his radio accomplishments. Its at http://sitka.triumf.ca/morgan/dlhings. (CGC Communicator)

**

OUR HERITAGE: THE SOUTHERN APPALACHIAN RADIO MUSEUM

According to an Internet posting by John Travis, W4QCF, if you like old radios, there is a new museum just for you. Called the Southern Appalachian Radio Museum, its located in Ashville North Carolina and is described as a dream come true for many years for members of the Quarter Century Wireless Association Smoky Mountain Chapter 145. The sponsoring group also recently received the club call W4AFM, which once belonged to Bill Hayes who was licensed in 1926. You can get a glimpse at what's there by visiting the museum website at www.saradiomuseum.org. The real world museum is open every Wednesday evening and John Travis says that you are invited to come and see it. (W4QCF)

**

NAMES IN THE NEWS: W6VQP NAMED FELLOW IN THE RADIO CLUB OF AMERICA

The Radio Club of America has announced its list of names to be inducted as Fellows in the organization. Among them is one well known to anyone who remembers the very early days of our news reporting operation.

One of the 20 inductees for the year 2001 is Radio Design Group president James R. Hendershot. Ham radio oprerators better know him as Jim Hendershot WA6VQP, the founder of the Westlink Radio Network. Westlink Radio was the original

name of the Amateur Radio Newsline when we first went on the air way back in 1977. (ARNewsline™)

**

INTERNATIONAL - IRELAND: NEW TELEPHONE TECHNOLOGY COULD CAUSE RFI

New high speed telephone technology in Ireland has been announced by their regulatory agency Eircom. The new system will provide Internet access using ADSL brand named 'I stream' using existing phone lines with subcarriers in the range 100 kHz to 1.1 MHz. This will allow faster speed downloading from the Internet and allow for existing voice calls to be carried on the same phone lines in the range 0 to 4 kHz.

But there is a downside. A large number of reports from United Kingdom trials show that radio receivers placed near the phone lines will have strong interference in the Long Wave and Medium Wave bands. There also may be interference in the High Frequency bands. And the system may be susceptible to interference from High Frequency transmitters as well. More details are available at www.eircom.ie. (IRTS, Q-News)

**

DX

In DX, C98RF in Mozambique has been really active on 30, 12 and 10 meters. Watch 12 meters from 1100-1730 UTC, 30 meters after 2100 UTC and 10 meters very early after 0900 UTC. QSL via DL6DQW. (OPDX)

And ET3VSC in Etheopia has been pleasing many CW operators over the past week with activity on 12 and 10 meters. Look for him between 1830 to 2130 UTC on either band. QSL via K3IRV. (OPDX)

**

THAT FINAL ITEM: WHO REALLY WAS SAMUEL FB MORSE

And finally, we started this weeks newscast with reference to the Morse Code. There is no need to tell anyone that the Morse code is synonymous with ham radio. For almost a hundred years the “code” has been such an integral part of the Amateur Radio service that for some in the hobby its a way of life. To others it was a dreaded obstacle to upgrading to a higher license class until restructuring capped the test speed at 5 words per minute. Yet without the code there might never have been ham radio because its use preceded voice transmission by many years. Even so, there are probably very few in the hobby who know much about the man behind the dots and dashes. But as Amateur Radio Newsline’s Henry Feinberg K2SSQ tells us, the code is only a small part of the story of the man:

--

Samuel Finley Breese Morse was not a ham radio operator. In fact, radio was more than a century away when he was born on April 27, 1791, in Charlestown, Massachusetts.

His childhood is described as almost mundane. He was the son of Jedidiah Morse, a church pastor who was as well known for his abilities in geography. A close family friend was Noah Webster who was equally known for his dictionaries.

Morse attended college at Yale where he is described as having been an indifferent student. But his interest was aroused by lectures of the then newly-developing subject of electricity. After college, to the his parents dismay, Morse directed his enthusiasm to painting which he studied in England. After settling in New York City in 1825, he became one of the most respected painters of his time.

In 1832, while returning by ship from another period of art study in Europe, Morse heard a conversation about the newly discovered electromagnet and conceived of the idea of an electric telegraph. By 1835 he probably had his first working model in the New York University building where he taught art. Being poor, Morse used such crude materials as an old artist's canvas stretcher to hold it, a home-made battery and an old clock-work to move the paper on which dots and dashes were to be recorded.

In 1837 Morse acquired two partners to help him develop his telegraph. One was Leonard Gale, a quiet professor of science at New York University and Alfred Vail, a young man who made available both his mechanical skills and his family's New Jersey iron works to help construct better telegraph models. With the aid of his new partners, Morse applied for a patent for his new telegraph in 1837, which he described as including a dot and dash code to represent numbers, a dictionary to turn the numbers into words and a set of sawtooth type for sending signals.

By 1838, at an exhibition of his telegraph in New York, Morse transmitted ten words per minute. He had dispensed with his number-word dictionary, using instead the dot-dash code directly for letters. Though changes in detail were to be made later, the Morse code that was to become standard throughout the world had essentially come into being.

During the next few years Morse exhibited his telegraph before savants, businessmen and committees of Congress, hoping to find the funds to give his telegraph a large-scale test. He met considerable skepticism that any message could really be sent from city to city over wire. On his own, in 1843, without significant help from his discouraged partners, Morse finally secured funds from Congress to construct the first telegraph line in the U. S. from Baltimore to Washington D.C. Morse directed the wires to be mounted on poles and by May 1844, the first inter-city electromagnetic telegraph line in the world was ready. Then, from the Capitol building in Washington, Morse sent a Biblical quotation as the first formal message on the line to Baltimore These were four words that changed the world of telecommunications forever. The four simple words: "What Hath God Wrought!" And trhe rest -- as they say -- is history.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

By the way, some of the information in this story came from the Locust Grove Samuel Morse historical site at www.morsehistoricsite.org. If you want to

learn more about the man and his contributions to society, we say its well worth a visit. Its one of the best. (Various Morse related websites)

From: Skipp <skipp@pilotNOSPAMPLEASE.ucdavis.edu>
Message-ID: <9qpnn6in2@woodrow.ucdavis.edu>
Source record: 101020

: VHFRadioBuff <vhfradiobuff@aol.comspamsux> wrote:
: I recently bought a Cobra 142 and have found that the previous owner cut R104,
: the modulation limiter. From what I understand, this is good for AM, but not
: SSB, which I enjoy operating.
: Can anyone tell me if I should try to reconnect R104 for better modulation on
: SSB? If so, how should I reconnect it?

Removing the modulation limiter is really bad news. Forget the legalities of it for a moment... the actual operation of your radio and the quality of your signal is then marginal at best.

One can look up the events of over modulation which occur without the limiter in line. An older ARRL Handbook does a pretty good job describing and showing the various effects of modulation to an AM signal.

Overmodulation reduces your signal clairity and useful power quite a bit. Most people tend to think it makes your radio louder, when in fact it does not. The rf products that are generated in an overmodulated signal send splatter up and down the adjacent frequencies. Couple that into and amplifier and you have a real dirty mess, bound to cause problems with other people.

Should you leave your limiter in operation, it's operation should actually give you really good audio compression, which translates to higher average level of modulation... something you can't get with the limiter disabled.

The radio runs better and your signal is mucho more loud with the limiter in operation. Some of the really bad, old "hack and shade tree technician stories" never seem to go away.

An example...
It's nothing like removing the speed limit controls from an old truck motor. It's more like removing the distributer spark advance limits which cause the running motor to fire the wrong spark. The motor runs worse for power and economy but the user thinks they get up to speed faster because the low end torque feels stronger. In fact, it's pretty bad news...

You get no advantage by removing the limiter circuit, in fact you get the reverse... less usable signal.

The actual circuit operation inside your radio is different during SSB and AM operation. In most cases different things happen with the limiter circuit disabled. In reality, the end result depends on the actual radio.

So, consider reconnecting the modulation limiter and you should notice a change for the better. Your average level of modulation should rise and you can be heard without all the splatter.

Many of the hack techs cut something in the radio, often a wire, resistor or diode(s). You can try to resolder the lead(s) back, or replace the wire/part as required to restore "normal operation."

hope that helps...

cheers
skipp

from the users of CB radio equipment - intruderso...

Group: rec.radio.cb Date: Wed, Oct 17, 2001, 6:11pm From:
joxendi@bellsouth.net (Jerry Oxendine)
By virtue of USAF policy, I am not permitted to personally divulge any
USAF frequency in spite of
the fact that any civilian can obtain these in most of the so-called
"Secret Frequency" books. I WILL tell you this; The worst "freeband"
frequencies, the ones that give us grief are 26.615 and
26.625.

"Now we are actually getting somewhere. A blanket approach gets neither
side anywhere."

Our frequencies are above, below, and around that general area, and the
splatter is horrendous. Also, as to harmonics from military equipment,
you must know that the NTIA standards are MUCH tighter than those of FCC
and all military equipment,

"My point exactly, but certain individuals can't comprehend that many
folks have radios that are clean clean clean! Don't be so surprised that
it's not only hammies that can achieve the blissful, super clean status
of a military station, especially when some are running nothing but
commercial quality or military stations themselves."

Response:
Still, a clean, clean, signal if transmitting on an unauthorized frequency
or right
adjacent can interfere as much. There's no getting around the fact the
"freeband"
station should not be there to start with.

including my own
IC706s must meet those standards or the station is NOT allowed to
operate there. Same way on
VHF. Certain amateur equipment mfrs do make high stability oscillators
as options for their
equipment, and there are certain mil spec mfrs such as Harris, Grove,
and Tait (VHF). I will be
obtaining a Tait in December because my VHF gear will "sunset" at that
time. Are we on those

frequencies 24/7? No. The 26 MHZ frequencies are like tools in your toolbox. You might not
need your socket set for weeks. But when you DO, you expect it to be there ready for use. So
you open your toolbox and discover that somebody has "borrowed" your 5/8" socket--the very one you need. The ONLY one that will fit. Now you are PISSED big time because your tool is
missing.

"But it's NOT missing. It can NOT be compared to theft, it is NOT a tangible object. If theft of a frequency was the issue, would not a "theft" or at least a trespass charge be employed?"

Response:

It may as well be "missing"--it has been usurped by an unauthorized station. The injunctions (NOVs, NALs) issued by FCC are, in fact, a form of "trespass" charge which the offender is required to answer--just as he would answer to a judge if charged with simple or criminal trespass onto someone's physical property.

Same way with 26 MHZ for CAP. We find a communications need and look in our
toolbox (the MUF) to find the "socket" (frequency) that will do the job. VERDAMMT! WAS IST LOS? Someone has borrowed our tool (frequency) and it is not available because that person
has stolen it, borrowed it, or whatever.
Now WE are pissed because we can't even use our own
tools.

"I understand your point, Jer, really, I do, but I asked you to forget those freqs for the sake of the issue. You are arguing a point which is preaching to the choir. I agree with you that certain freqs are to be avoided, that was never an issue. Let's cut to the chase. Are you also stating that there are no abandoned freqs in that bit of band?"

Response:

I do not know and cannot honestly say. What I do know is that those frequencies show assignments, according to current frequency lists. The analogy is still good that those frequencies belong to someone, whether they use them regularly or not. Therefore, neither I nor anyone else has the right to use them.

Now we must transfer that traffic to VHF or to another HF frequency that gets out long haul
where we "might" interfere with yet another search mission in another state. So, by not being able to use the ideal frequency in the instant case, the harm comes in several possible ways: 1) On VHF where the traffic load (tactical) is the heaviest by far we add yet more traffic that could've been handled on the low power 26 circuit had it been free of jabber, squeaks, squawks, and racket. 2) We now raise the possibility of having onlookers at a crash site that might interfere with the wreck-

age by moving or taking evidence, or simply by being in the way until we can get law enforcement
there to make 'em leave. 3). In spite of coded traffic, victims' relatives
may be able to figure out
adverse news prior to procedures designed to deal with the family can be implemented.

"Well, I think this is a bit of a stretch, but I'll go with it. Worst case scenario of what COULD happen: Relative killed in some type accident, kin hear it before being notified. No safety concerns here, or harm done, and again, no victim. No victim = no crime. I won't even bother with who makes the "procedures" and standard prorocol when dealing with families. The govt has their own way, as does the airlines, as does Amtrak, etc. This is a rule of inconvenience/convenience at best, based on nothing to do with safety or welfare concerns."

Response:

I cannot agree with the above regarding the feelings of families who are anxiously awaiting news of their long overdue loved ones. All the agencies you mention, indeed, do have procedures for notifying family--all of them designed to do so with the least amount of distress. We OWE the family this consideration. Again, if there is someone nearby operating on our frequency (s) with a big "leen-yer", it disrupts our operations as it would any agency who was attempting to accomplish a job or mission. IF there is a person alive and injured, say, in a crashed airplane on a mountainside, his best chances of survival are if he is found within the first day. Any delays
that ensue, any disruptions in radio communications lessen the likelihood of his being located in time.

4) Putting
the traffic on long range strategic frequencies where it will be broadcast all over the world when such is neither needed or wanted, and perhaps causing interference to OTHER emergency opera- tions that may require the use of said strategic frequencies. Not that it always will, but the direct
operations of illegal stations, OR the forced re-direction of traffic by an agency because of such
operations CAN cause the agency to interfere with itself while their forces in another area
attempt to exercise their band plans to deal with some other local scenario.

"Yep, and anyone CAN have a heart attack at any time. Do we all pop nitro for it? Anyone CAN get struck by lightning. Do we avoid going out when it rains? We MAY get killed in an auto accident. Do we avoid cars? The probability factor MUST come into play in this flawed equation."

Response:

And those CANS and PROBABILITIES are why we take precautions.
As to radio and the things that "could" happen, laws are passed based on experience to reduce such. Some things, like propagation, sunspots, and terrain, we cannot change. But we CAN pass laws to prevent man-made interference, and to punish those who would operate in a manner that, as you say, "COULD" cause interference and disruptions to other radio services. Those laws are not THAT restrictive, and only attempt to see that all agencies,
companies, and individuals are able to use their assigned frequencies without
hindrance or having to compete with non-licensees.

Finally, to address your questions about harm done on certain "freeband" frequencies, I somewhat
agree that in some cases there may not be any---especially if those frequencies are themselves quite
close to the band edges of CB. But what is happening that has caught the attention of ITU, and may eventually create an international
":incident", is the straying farther and farther and still farther of the so-called "freebanders".
They are boldly promoting export radios with the capability of operating from 24-32 MHZ--or at lease those who would peddle such wares to them---and people are simply using them.

"And those transgressors should be dealt with if they cause problems. Not IN CASE they cause problems. Speeding has always been freely analogized to this act, not that it's anymore accurate than the rest, but let's go with it for a second. It is up to the cop whether to pull you over or not. Then the discretion to give you a ticket or not is also evaluated. Let the crime fit the punishment...no victim, again, equals no crime."

Response:

Waaaaal, I'm not going to get into the strident "anti-keyclown" rant. I don't, however, agree with the above. Laws ARE passed to prevent a problem, i.e., in CASE. If you ask a legal expert as to the law's interpretation, the fact that one is speeding is still a crime simply because
the law SAYS it is. Now if a cop fails to stop you for it, he is an accessory
to your lawbreaking. The law simply states, in essence, "Thou shalt", or "Thou
Shalt Not" drive over 45 mph, for example. Whether you get caught for it or not
is immaterial; it is still a matter of willingly speeding.

In the matter of "freebanding", the laws (OK, rules which have the backing of law)
state certain "Thou Shalts" and "Thou Shalt Nots". One of those "Shalt Nots" is to
operate a transmitter on a frequency for which thou art not licensed. It does not matter

if the frequency is used daily, infrequently, never, or is vacant. If you get caught at
ANY "victimless" crime, will it do any good to argue before the court that it was OK
because nobody got hurt? I doubt it because the judge is going to check to see what law
was broken and if that law says "Thou Shalt Not", he is going to apply the law and the
punishment that applies. Again, back to the "TRESPASS" concept: If you see a sign that
says "No Trespassing", and you cut thru the pasture and get caught by the owner, you will
face the music if he decides to press charges. Did you "hurt" anything by cutting thru his land?
No. You were informed not to come onto his land. You got punished simply for BEING there.
That's the way the law is regarding the so-called "freeband". YOU will get punished, if caught,
if the "cop" (FCC) catches you simply because you "trespassed", encroached upon, used, vio-
lated frequencies that aren't "yours" to use.

sounds like channel 19 now, and quite
frankly, if I had the permission and the means, I'd like to key down with a gazillion watt AM
transmitter and blank out every illegal idiot on there! Again, they are cutting across "my" pasture
and trespassing on "my" turf. But I cannot do that. If the freebanders will usurp forestry frequencies, then go onto 10 meters,

"So you throw the baby out with the bathwater? Indviduals MAY go on ten meter because they hear me on an abandoned petroleum freq? I seriously doubt that scenario. Even if that were to happen, as isolated as it would be, it is up to the operator to know where he is transmitting at all times.
Hell, Jer, using that analogy, you better clean that 2 meter band up real quick. If a newbie licensed hammie hears something like the Liberty net, they MAY go wild on ALL the other hammie freqs 'cause they think it's ok. Utter Balderdash."

Response:

WILL go onto 10 meters? They are already there. I can sit during any day and listen to 28.085 (the most popular one) and hear the truckers all over the
country! I doubt it has anything to do with hearing a particular individual on his
favorite "freeband" frequency. This issue has more to do with the greedy truck stop
shops selling "export" radios with "them thar 'extree' channels thar". The truckers

don't really know where they are--they've been told "channel 19 2-up". And I know
this: They are getting caught by hams who are sick and damned tired of it. Am I one
of the ones trying to catch 'm? YOU DAMN RIGHT! I don't really care what fellas do
dnwn on CB so long as their operations don't mess me up. But when I attempt to call
CQ on 28.085 and hear SQUEAK! BEEP!, etc, then they are trespassing in MY pas-
ture. I've got my tape recorder, camera and notepad in the car, and if I hear one on I-85
while I am out there he is NAILED.

Now that shoe fits both feet. If you hear clowns, yes idiot HAMS, on 2 meters, then why
don't you turn them in, or complain to the control operator? I would. Mr. Hollingsworth is
doing a great job of cleaning this up, but he can't deal with if if he doesn't know it. Around here
that kind of behavior will not be tolerated--the control ops will drop the repeater right out from
under them. If you are talking about dumb, inane conversations, well, you can't regulate stupid!
The 3950 guys will take care of themselves: if Riley hasn't gotten around to them, he will.

onto 12 meters, then down to 17, where does it
stop? The asnwer is, it won't!

"This too, is BS, Jerry. Don't tell me how it doesn't stop, because I have been talking on the same freqs since the late seventies and I have no inclination to foray into your MARS freqs, VHF, or any other hammie freq. and most freebanders are polite, mindful, and considerate, even to the point that I can listen to them all night and day and not hear nearly half the problems I hear on the staright 40 or hammie bands. It stops where it always has with most organized DX club freebanders. You are beginnig to sound paranoid that freebanders want your hammie freqs...trust me on this Jer, we want nothing of the sort. If we did, our ticket would be on display, we wouild think it made us "smarter" and we would be talking with other hammies on permitted freqs, but we don't, and we intentionally avoid the hammie bands like the plague. "

Response:

With all due respect, TW, how can you speak for all "freebanders"? In the ham bands, we have "renegades" just like in CB--just read RainReport to see that. It is those renegade operators, hams and freebanders alike, that
are bring adverse attention (ITU) on their hobbies.

hy ITU is addressing this issue--to draw a line in the sand
and turn back the stampede of unlicensed intruders that is coming IF
such is ignored. It is not only
the US that is affected by this; complaints are coming from all over the
world. "tis just the way it is.
Jerry

"And we will roll with the changes, as we always have. I take no issue
with your reasoning concerning hammie band intrusions, but not all freqs
are used, and not all freebanders use dirty equipment. After 20 plus
years of continual DX, the only problem I ever encountered concerning
those activities are the cry babies right here in this forum. Nothing
else, ever. And don't tell me it's luck, 'lest the entire American
contingency of the Alpha Tangos, Sugar Deltas, Charlie Michaels, etc.,
etc.,have been riding one bitch of a wave of tremendous continual luck
for over 30 years. I also understand your frustration that causes
hammies to take aim at intruding freebanders.....no matter how incorrect
that aim may be. You are absolutely correct defending "your" turf, if
you truly believe that. My objection isn't with that point. Matter of
fact, I have no objection at all, it's the direct opposite. It appears
the same few are taking objection with my maintainment that I bother nor
hurt no one while ragchewing on my fave DX freqs. The objections are all
redundant and contaminated with personal prejudices and "what if's?"

TW, I truly say this without personal angst. I don't know about "incorrect
aim". I will defend my turf. No need belaboring the point. I only
respectfully
point out the following, and I don't mean it to be smart aleck or ugly in
any way.
When it is all said and done, no matter the personalities, the anger, the
arguments,
and insults, the law is against "freebanders". I know you won't argue with
that, and
if you got caught, you would face the music. The law IS on the side of
those griping
hams, yeah, those grouchy old men whom so many CBers disdain. If you had to
go to court with the same arguments you put forth here, do you believe you
would win
your case?

Finally, let me say this in defense of Amateur Radio. It is NOT made up
primarily of
"grouchy old men" with nothing better to do than whine about their aches and
pains. IF
I wanted to find those old farts, I certainly can. I can dial thru the CB
channels and find
them there, too. There is NO difference in CB operators and ham operators.
We live,
we eat, sleep, work, and put our britches on the same way. People tend to
form "cliques"
or circles of friends in all kinds of endeavors: work, play,
church--anything. For example,

if you come thru here on I-85, you just might hear a bunch of us local hams on 28.610 scattered
out in a 35 mile radius. This just happens to be where we gather, especially when the skip is NOT
in, mostly at night. We talk about radios, (of course), current events, tell jokes, talk about what's
been going on that day, tease each other (mildly), and engage in health doses of laughter. I can't
find any evidence of old farts on that frequency! I really wish YOU would take advantage of what
ham radio has to offer. Like CB, it will become what YOU make it. I have run into curmudgeons
on ham radio, I told them to kiss my grits and moved somewhere else. There are fine, fun, and
motivated people in the hobby. You just have to find them.

Best 73, and I am enjoying our debate!

: Bill Eitner <kd6tas@netzero.net> wrote:
: I wouldn't worry about it. The radio has a
: front panel mic gain control. Modulation
: limiters are for guys who don't know how
: to properly set mic gain controls.

COME ON BILL!!!

How wrong can you be in such a short amount of words. Modulation limiters make the radio work the best possible. What about 100 percent modulation works better than 150 percent..? Look it up in any electronic text and then tell us what the rest of the world says. You are big time wrong..!

: Don't
: overdo the mic gain and you won't have a
: problem. Keep in mind that ALC circuits
: (SSB modulation limiters) create their own
: form of distortion that is often audible and
: has a detrimental effect on spectral purity.

Reads like a classic bit of misinformation doesn't it... Bill, you are so off base. Audio limiters and compressors remove leagues more over modulation signal damage from any AM or SSB signal vs. any circuit in operation without one.

The mis leading part of Bill's BS is the generic labels thrown in without any examples. Operation of a typical transmitter limiter or compressor radio circuit most often does not provide any level of audible distortion.

Every transmitter mfgr uses them for good reason.

The facts:
The effects of no audio limits cause overmodulation which is big time RF Waveform Distortion. A big time reduction in your useful signal and generation of mucho unwanted products (splatter). RF distortion should not be directly compared to audio compression or limiting. Lack of audio limiting will very often cause the RF distortion. Any audio distortion is for the most part, inaudible.

ANY AND ALL properly designed limiter, compression and "alc" circuits should cause no audible distortion in regular operation. Bill is in fact big time wrong. Broadcast, two-way radio and a gazillion other applications clearly prove his statements as BS. Forget that he defies every related electronics book in the world.

: The cleanest possible signal is achieved
: when there is no overmodulation OR ALC

: distortion.

They are two different things, treat them as such. Extra Heavy ALC operation as described by Bill results in a compressed sounding signal, but no RF splatter/distortion. Compressed audio can be cured with the mic gain knob. A radio with no limiter needs to be repaired as it's causing splatter up and down the band.

: That situation is arrived at by
: disabling the ALC circuit so that it can't
: attack a less than 100% modulated signal,

What is wrong with compressing a signal Bill..? Your higher level of average audio is much louder and clean. Every single broadcast station in the world uses audio alc to bring up their average level of modulation. It's big time business...

: and by proper adjustment of the mic gain
: control.
: -=[Bill Eitner]=-

Every single operation of an AM radio transmitter without some measure of peak limiting will have over modulation problems. You can't hide from it and it's sad to see such disinformation posted for all to read. No adjustment of a radio mic gain (in a transmiter with the limiter circuit disabled) will ever produce a signal as clean and loud as any normal well designed and operated radio transmitter with the limiter in operation. Fact is fact...

Thousands of Books, Engineers and Technicians say you are big time wrong Bill. But don't take my word for it. Pick up any past or present Radio Handbook and read it for yourself.

Sure why not there is no law or ettiquite against it When in Rome do as the Romans do, I don't see you out here giving your name and address each time you post. It is par for the course this is a CB NG lots of guys use Cb handles and fictious names.

> Using the same tactics as those you oppose makes >you no better than them.

Phil, If I was freeebanding and using illegal power you would have a point otherwise no one is using the same tactics as anyone else.

> And besides, in the AKCer's estimation they are all >criminals - why would you expect any other >behavior?

Phil, What about in your estimation ? they are using those names and you don't say anything about there credibility whatsoever, are you the hypocrite here?

>Seems to me you are a hypocrite when you use the same techniques and >behavior as those you speak
> out against.

Which Anti is using illegal amps and out of band freqs? If none are then how do you compare the tactics and techniques to be the same What techniques are being used that are the same as they use? The anonymous names?

> If you want to take the high road your behavior should be
> better than theirs. But it is not so you suffer from the lack of
> credibility. All of your posting are then reduced to just more noise...

Why Phil, this is a CB NG 2 separate entities How is someone's behavior here going to influence how a keyclown operates on the radio. I can hear it now. "Well you know what that Aaron was so nice and polite this week about his FCC rules posting I think Ill stay off the freeband this week, hell Ill even cut the amp back a few notches for his continued good behavior in the rec.radio.CB Usenet. But If he gets out of line one time, Ill punish him so look out I am cranking it up Big Time this weekend." Phil Go take up charades or something you don't have us fooled. Or better yet start pointing out the non credible post from guys with names like twistedhed, Train, Stealthrat, Landshark, Moparholic etc Then perhaps you won't be seen as just a troll looking for attention.

> News to me!

I was referring to his old web page showing the modified FT-840 etc. along with his bragging about using it on the freeband.

His present dilemma, with the contents of his web site, he has to settle with his ISP. Some ISP's consider themselves a "family oriented service" and take a dim view of the kind of material Tim is putting up. The TOS agreement may also be violated by the material he puts up as well. Finally he does risk some law enforcement action if some of the young ladies, whose reveling photos he puts up, turn out to be under legal age. Nothing like getting slapped with a charge of "kidde porn" becasue some 16 year old pulled up her blouse for a photo, and she just looked like she was 18 or older. Yup and all the guys tell the police, and her parents, they got the picture off of Tim's web site. He should seriously consider the wisdom of putting up photos of females he knows nothing about, particularly their age.

Phil are you saying these other guys are cowards for not using there real names ? Please lets set the record straight. And answer that important question, before we can really continue.
what or how in God's green earth are you trying to compare Freebanding and Illegal power techniques these are the guys the Antis oppose, as to what screen name a person uses as the same techniques as those guys.

"Campaign of harassment"? The keyclowns are being "harassed"? I
didn't know that. Poor keyclowns! How are they being harassed? Are
they being threatened with physical violence? By who? I hope they're
not scared! Wow, delicate little keyclowns need protection and you're
just the man protect them, Phil!

>After all, in your view they are all criminals.

No Phil. If some jerk says "I don't care about FCC rules, I do what I
want" wouldn't you say there's a pretty good chance he doesn't like to
obey FCC rules? If some guy posts an ad for a DaveMade 82 pill, it
doesn't take a genius to see he's violating laws.

But go ahead and close your mind, put on your noise filter and block
your ears, because the truth obviously hurts ya, Phil.

Phil, I am telling you, there is no other "secret identity". If you
think there is then publish it. Put up or shut up.

> > Before you go around slapping
> > labels on people, maybe you should look at both sides of the issue.

You get riled up when keyclowns get dissed. Guess that makes you a
keyclown defender. Or something. But go ahead, you tell me what you
think you are. Just don't say "unbiased".

> > Many people here seem so hell-bent on condemning Voobner that they

Who says anyone wants to "appear superior"? That's YOU saying that
Phil. That's YOUR agenda, not mine. Uh oh. We're gettin close to the
truth now. Better switch on yer "filter"!

(Phil clamps his hands over his ears
"voobner...powerful...must...block out!")

> If you
> self-appointed-radio-cops-who-have-taken-the-high-road have no problem with
> posting disruptive garbage here on the newsgroups and elsewhere then why
> would anyone believe that you would not exhibit the same disruptive behavior
> on the CB band or the Ham bands?

That would be a good point -- IF there were "radio cops" -- self
appointed or otherwise. But there ain't. At least I know I'm not
one. I have no power to arrest anyone or enforce anything nor would I
want any.

Disruptive behavior? Jeez Phil, if me saying "5000 watts is illegal
on CB" is DISRUPTIVE to you, then don't read the FCC rules -- because
you are going to get "disrupted" big time when you see some of the
stuff they have in Part 95 and Part 97!!!

> Isn't that what you say that you stand against?
> Every time you lower yourself to the level of those you are in
> opposition with you lose more credibility.

Those I am in opposition with have no credibility anyway, Phil. Who
cares what criminals think of me?

> Being the law abiding and
> upstanding citizens that you are

Who ever said I was? And what do you have against "law abiding
upstanding citizens"?

> I would think that you radio cops

What "radio cops"?

> would
> want to be above such behavior.

Nope. I don't care if criminals think I have "credibility" or not.

They are the same alternator except 1 is DC and has internal rectifiers(the 270) and the 250/240's Ac have none, If you remove the rectifiers from the 270 you now have a AC 240/250 Leece. The guts (coil,stator, rotor) are the same.

Hi Peekaboo and IGotMadFunds. I can see that you are two guys with a
lot of credibility and all, so I just wanted to remind you fellas
about amps on CB. They are illegal. I bet you didn't know that. As a
service, I include the FCC rules here. Have a nice day.

-Aaron-

Federal Communications Commission (FCC)

Part 95 - Subpart D - Rules for CB Service
Citizens Band (CB) Radio Service

General Provisions-

[RULE 1] Description
[RULE 2] Usage of Rules
[RULE 3] Who is Eligible
[RULE 4] Licenses
[RULE 5] Areas Of Legal Operation
[RULE 6] Special Restrictions
[RULE 7] Operating Channels/Frequencies
[RULE 8] Antenna Height
[RULE 9] Equipment
[RULE 10] Power Output
[RULE 11] Linear Amplifiers
[RULE 12] Permitted Communication
[RULE 13] Illegal Communication
[RULE 14] Paying for Actual Use
[RULE 15] Who Is Held Accountable
[RULE 16] Time Limit of Transmissions
[RULE 17] Identification Methods

[RULE 18] Emergency Usage and Assisting Travelers
[RULE 19] Remote Control Operations
[RULE 20] Telephone Patches and Telephony with CB
[RULE 21] Penalties
[RULE 22] Correspondence from FCC
[RULE 23] Notice of Interference
[RULE 24] Service to Transmitters and Antennas
[RULE 25] Modifications to Transmitters
[RULE 26] FCC Inspections
[RULE 27] Keeping Station Records
[RULE 28] Contacting the FCC

RULE 1 - Descriptions The Citizens Band Radio Service (CB) is a private, two-way, short-distance voice communications service for personal or business activities. The CB Radio Service may also be used for voice paging.
RULE 2 - Usage of Rules You must comply with these rules when you operate a station in the CB Service from:
{1} Within or over the territorial limits of places where radio services are regulated by the FCC.
{2} Aboard any vessel or aircraft registered in the United States or
{3} Aboard any unregistered vessel or aircraft owned or operated by a United States citizen or company.
Your CB must comply with Part 95/Subpart E [Technical Rules].
Where the rules use the word "you", "you" means a person operating a CB station. Where the rules use the word "person" the rules are concerned with an individual, a corporation, a partnership, an association, a joint stock company, a trust, a state, territorial or local government unit, or other legal entity. Where the rules use the term "CB station", that means a radio station transmitting in the CB Radio Service.
RULE 3 - Eligibility To Use CB You are authorized to operate a CB station unless:
{A} You are a foreign government, a representative of a foreign government, or a federal government agency.
or
{B} The FCC has issued a cease and desist order to you, and the order is still in effect.
RULE 4 - Licenses You do not need an individual license to operate a CB station. You are authorized by this rule to operate your CB station in accordance with the rules stated in this Subpart. (*also read Rule 17)
RULE 5 - Areas of Legal Operation You are authorized to operate your CB station from:
{A} Within or over any area of the world where radio services are regulated by the FCC. Those areas are:
[1] The 50 United States
[2] The District Of Columbia
[3] Commonwealth of Puerto Rico
[4] Navassa Island

[5] United States Virgin Islands, it's 50 islets and cays
[6] American Samoa
[7] Baker Island
[8] Commonwealth of Northern Mariana Islands
[9] Guam Island
[10] Howland Island
[11] Jarvis Islan
[12] Johnston Island
[13] Kingman Reef
[14] Midway Island
[15] Palmyra Island, and it's 50+ islets
[16] Wake Island
{B} Any area of the world, except, within the territorial limits of areas where radio services are regulated by -
[1] An agency of the United States other than the FCC, you are subject to it's rules.
[2] Any foreign government, you are subject to it's rules.
{C} An aircraft or ship, with the permission of the captain, within or over any area of the world where radio services are regulated by the FCC or upon or over international waters. You must operate your CB station according to any applicable treaty to which the United States is a party.
RULE 6 - Special Restrictions
{A} If your CB station is located on premises controlled by the Department of Defense you may be required to comply with additional regulations imposed by the commanding officer of the installation.
{B} If your CB station will be constructed on land of environmental or historical importance (such as a location significant in American history, architecture or culture), you may be required to provide information to comply with Part 1.1305 through 1.1319 of the FCC Rules.
RULE 7 - Operating Channels/Frequencies Your CB station may transmit only on the following channels / frequencies:
Channel Frequency Channel Frequency
1 26.965 21 27.215
2 26.975 22 27.225
3 26.985 23 27.255
4 27.005 24 27.235
5 27.015 25 27.245
6 27.025 26 27.265
7 27.035 27 27.275
8 27.055 28 27.285
9* 27.065 29 27.295
10 27.075 30 27.305
11 27.085 31 27.315
12 27.105 32 27.325
13 27.115 33 27.335
14 27.125 34 27.345
15 27.135 35 27.355
16 27.155 36 27.365

17 27.165 37 27.375
18 27.175 38 27.385
19 27.185 39 27.395
20 27.205 40 27.405

{B} * Channel 9 may be used ONLY for emergency communications OR for traveler assistance.
{C} You must, at all times and on ALL channels, give priority to emergency communication messages concerning the immediate safety of life or the immediate protection of property.
{D} You may use ANY channel for emergency communications or for traveler assistance.
{E} You must share each channel with other users.
{F} The FCC will not assign any channel for the private or exclusive use of any particular CB station or group of stations.
{G} The FCC will not assign any channel for the private or exclusive use of CB stations transmitting single sideband or AM.
RULE 8 - Antenna Height
{A} "Antenna" means the radiating system (for transmitting, receiving or both) and the structure holding it up (tower, pole or mast). It also means everything else attached to the radiating system and the structure.
{B} If your antenna is mounted on a hand-held portable unit, none of the following limitations apply;
{C} If your antenna is installed at a fixed location (whether receiving, transmitting or both) it must comply with EITHER one of the following:
[1] The highest point must not be more than 20 feet (6.10 meters) higher than the highest point of the building or tree on which it is mounted;
or
[2] The highest point must not be more than 60 feet (18.3 meters) above the ground.
{D} If your CB station is located near an airport, and if your antenna structure is more than 20 feet (6.10 meters) high, you may have to obey additional restrictions. The highest point of your antenna must not exceed 39.37 inches (1 meter) above the airport elevation for every 109.36 yards (100 meters, 1 hectometer) of distance from the nearest point of the nearest airport runway. Differences in ground elevation between your antenna and the airport runway may complicate this formula. If your CB station is near an airport, you may contact the nearest FCC field office for a worksheet to help you figure the maximum allowable height for your antenna.
WARNING: Installation and removal of CB station antennas near powerlines is dangerous. For your safety follow the installation directions included with your antenna.
RULE 9 - Equipment
{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance'label placed on it by the manufacturer. You may

examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. (*read Rule 25) Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.
RULE 10 - Power Output
{A} Your CB station transmitter power output must not exceed the following values under any conditions:
AM [Amplitude Modulation] - 4 watts carrier power [CP]
SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
{B} If you need more information about the power rule, see Part 95/ Subpart E.
{C} Use of a transmitter which has carrier [CP] or peak envelope power [PEP]in excess of that authorized voids your authority to operate the station.
RULE 11 - Linear Amplifiers
{A} You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear amplifiers, or linears;
or
[2] Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.
{B} There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF] power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not apply if you hold a license in another radio service (HAM, etc.) which allows you to operate an external RF power amplifier.
RULE 12 - Permitted Communications {A} You may use your CB station to transmit two-way plain language communications. Two-way plain language communications are communications without codes or coded messages. Operating signals such as "ten codes" (10-4, etc.) are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station, or to authorized government stations on CB frequencies about-
[1] Your personal or business activities, or those of members of your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the Civil Defense Agency with authority over the area in which your station is

located.
{B} You may use your CB station to transmit a TONE SIGNAL only when the signal is used to make contact, or to continue communications (Examples: tone operated squelch, selective calling circuits). If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking.
{C} You may use your CB station to transmit one-way communications (messages not intended for two or more CB stations) only for emergency communications, traveler assistance, brief tests (radio checks) or voice paging.
RULE 13 - Illegal Communications {A} You must NOT use a CB station-
[1] in connection with activity which is against federal, state or local law;
[2] to transmit obscene, indecent or profane words, language or meaning;
[3] to interfere intentionally with the communications of another CB station;
[4] to transmit one-way communications, EXCEPT for emergency communications, traveler assistance, brief tests (radio checks) or voice paging;
[5] to advertise or solicit the sale of any goods or services;
[6] to transmit music, whistling, sound effects or any material to amuse or entertain;
[7] to transmit any sound effect solely to attract attention;
[8] to transmit the word "MAYDAY" or use any other international distress signal, EXCEPT when your station is located in a ship, aircraft or other vehicle which is threatened with GRAVE AND IMMINENT danger and you are requesting IMMEDIATE assistance.
[9] to communicate with, or ATTEMPT to communicate with, any CB station more than 155.3 miles (250 kilometers) away;
[10] to advertise a political candidate or political campaign (You may use your CB radio for the business or organizational aspects of a campaign, if you follow all other applicable rules);
[11] to communicate with stations in other countries, except stations in Canada (on General Radio Service).
[12] to transmit a false or deceptive communication.
{B} You must not use a CB station to transmit communications intended for live or delayed rebroadcast on radio or television. You may use your CB station to gather news items or to prepare programs.
RULE 14 - Paying for Actual Use {A} You may not accept direct or indirect payment for transmitting with a CB station.
{B} You may use a CB station to help you provide a service, and be paid for that service, as long as you are paid only for the service and not for the actual use of the CB station.
RULE 15 - Who Is Held Accountable You are responsible for all communications which are made BY YOU from a CB station.
RULE 16 - Time Limit of Transmissions {A} You must limit your CB communications to the minimum practical time.
{B} If you are communicating with another CB station or stations, you,

and the stations communicating with you, must limit each of your conversations to no more than five (5) continuous minutes.
{C} At the end of your conversation, you, and the stations communicating with you, must not transmit again for at least one minute.
RULE 17 - Identification Methods {A} You need NOT identify your CB communications...
{B} You are ENCOURAGED to identify your CB communications by any of the following means:
[1] Previously assigned FCC CB call sign
[2] K prefix followed by operators initials and residence zip code
[3] Your name;
or
[4] Description of your organization including name and any applicable operator unit number
{C} You are encouraged to use a "handle" (nickname) ONLY IN CONJUNCTION WITH the methods of identification listed above in paragraph B of this section.
RULE 18 - Emergency Usage and Assisting Travelers {A} You must at all times and on all channels, give priority to emergency communications.
{B} When you are directly participating in emergency communications, you do not have to comply with Rule 16 about length of transmissions. You must obey all other rules.
{C} You may use your CB station for communications necessary to assist a traveler to REACH A DESTINATION or to RECEIVE NECESSARY SERVICES. When you are using your CB station to assist a traveler, you do not have to obey Rule 16 about the length of transmissions. You must obey all other rules.
RULE 19 - Remote Control Operations {A} You MAY NOT operate a CB station transmitter by RADIO remote control.
{B} You MAY operate a CB transmitter by WIRELINE remote control IF you obtain specific approval in writing from the FCC. To obtain FCC approval you must show why you need to operate your station by wireline remote control. Send your request and justification to: FCC, Gettysburg, PA 17325.
If you receive FCC approval, you must keep the approval as part of your station records (read Rule 27 on station records).
RULE 20 - Telephone Patches and Telephony with CB {A} You MAY connect your CB station transmitter to a telephone if you comply with ALL of the following:
[1] You or someone else must be present at your CB station and MUST-
(i) manually make the connection (the connection cannot be made by remote control);
(ii) supervise the operation of the transmitter during the connection;
(iii) listen to each communication during the connection; and
(iv) stop all communications if there are operations in violation of these rules.
[2] Each communication during the telephone connection must comply with all of these rules.
[3] You must obey any restriction that the telephone company places on

the connection of a CB transmitter to a telephone.
{B} The CB transmitter you connect to a telephone must not be shared with any other CB station.
{C} If you connect your CB transmitter to a telephone, you must use a phone patch device which has been registered with the FCC.
RULE 21 - Penalties may not be current penalty information. {A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you may have to pay as much as $2,000 for each violation, up to a total of $5,000.
{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop whatever action caused the violation.
{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to $500 for each day you committed the violation.
{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications Act, you may be fined up to $10,000 or may be imprisoned for one year, or both.
RULE 22 - Correspondence from FCC {A} If it appears to the FCC that you have violated the Communications Act or these rules, the FCC may send you a discrepancy notice.
{B} Within the time period stated in the notice, you must answer with:
[1] A complete written statement about the apparent discrepancy;
[2] A complete written statement about any action you have taken to correct the apparent violation and to prevent it from happening again; and
[3] The name of the person operating at the time of the apparent violation.
{C} If the FCC sends you a letter asking you questions about your CB radio station or its operation, you must answer each of the questions with a complete written statement within the time period stated in the letter.
{D} You must not shorten your answer by references to other communications or notices.
{E} You must send your answer to the FCC office which sent you the notice.
{F} You must keep a copy of your answer in your station records.
RULE 23 - Notice of Interference {A} If the FCC tells you that your CB station is causing interference due to technical reasons, you must follow all instructions in the official FCC notice (This notice may require you to have technical adjustments made to your equipment).
{B} You must comply with any restricted hours of CB station operation which may be included in the official notice.

RULE 24 - Service to Transmitters and Antennas {A} You may adjust an antenna to your CB transmitter and you may make radio checks (One-way transmissions for a short time in order to test the transmitter).
{B} Each internal repair and each internal adjustment to your FCC type-accepted CB transmitter must be made BY or under the DIRECT SUPERVISION of a person licensed by the FCC as a GENERAL

RADIOTELEPHONE OPERATOR.
{C} Except as provided in paragraph D below in this section, each internal repair and each internal adjustment of a CB transmitter in which signals are transmitted must be made using a NON-RADIATING antenna (Dummy Load).
{D} Brief test signals (signals not longer than one minute during any five minute period) using a radiating antenna may be transmitted in order to:
[1] adjust an antenna to a transmitter;
[2] detect or measure radiation of energy other than the intended signal;
or
[3] tune a receiver to your CB transmitter.
RULE 25 - Modifications to Transmitters {A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate on unauthorized frequencies or with illegal power.
RULE 26 - FCC Inspections {A} If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records available for inspection.
{B} A CB station includes all of the radio equipment you use.
RULE 27 - Keeping Station Records Your station records include the following documents, as applicable: [1] A copy of each response to an FCC violation notice or an FCC letter.
[2] Each written permission received from the FCC.
RULE 28 - Contacting the FCC {A} Write to your nearest FCC Field Office to: [1] Report an interference complaint; or [2] want to know if the FCC has type-accepted a particular transmitter for CB service.
{B} Write to the FCC if you have questions about the CB Rules: FCC Private Radio Bureau Personal Radio Branch Washington, DC 20554

lol

I just came in to take a break from putting up the tower and the beam.

Should have the base station back on the air this weekend, barring any major problems :)

2SC2879 is rated for 20 amps input at 13.8 / 12 volts.

32 of them = 20X32=640.

Since when did 640 = 500? Especially with the numbers the battle boxes put out?

Your nuts if you run a 32 pill on 2 alternators and expect to not blow stuff / get peak performance out of it.

1925. Re: Mopar supports claim Tim bootlegs on the Ham bands using my callsign!

Newsgroup: rec.radio.cb
Date: 2001-10-19 20:31:55 UTC
From: timnebo@aol.comLOL
Message-ID: <20011019163155.12883.00000309@mb-ms.aol.com>
Source record: 101087

all i ever wanted you to do is prove it, relying on anonymous people from a newsgroup is hardly evidence. i freeband and at times run over 4kw's, so what? if i bootlegged on the ham bands i'd tell you that as well. i'm no coward lelnad. i'm not scared to say what i do or believe and i dont feel the need to pretend i'm somebody and agree with myself while pretending to be another person like some on here do. if you knew anything about hf radios or the hf bands you would know that a soldering iron isnt even used to modify the 840, actually no tools are quired at all. it is made by yaesu specifically to be modded for full band tx under the mars/cap rules and is very easily done. the radio has been sold now and is being proudly used on the freeband still in its unmodified state, well unless you call pushing some buttons in the right order "being modified"

FT-840 General Coverage Transmit:
ON local unit, connect tp2003 to ground
Switch radio on
Hold SSB and AM down
Switch off
Switch on
02 OFF will appear on readout
Rotate main dial until 02 ON appears
Press AM NARROW--display will show 7.000 mhz lsb
Press MEM DOWN
Press MEM UP
Switch off radio
REmove earth at TP2003
Switch radio on

now lelnad you read that and tell me this radio was not designed in the first place for full band tx? if it wasnt it wouldnt be so easy to make it that way.

>Did you know that he even sent me an E-mail claiming it's not his fault =
>the rig will work on 11m. He's so screwed up with his pirate mentality =
>he really suggested it was some how Yaesu's fault that the rig works =
>there. Yeah, right, the screws fell out of their holes and the soldering =
>iron levitated itself around the rig modifying the solder blobs, which =
>controls the rig's band programming lock out ranges. OR the rig pops =
>right out of the box 11m and Freeband ready for all those lucky illegal =
>CBers out there. Of course he forgot about getting found out by some of =
>the others members of the news group that he was trying to sell the rig =
>as "unmodified". I would like to see him produce any documentation =
>showing that rig being used for 11m legally, and how to order it 11m =
>ready from the factory.

> Shanepuppet, the key is "non certified". Be it kit or manufacture.

Dunno what a "shanepuppet" is, but a couple of things come up here as interesting...:

a. It doesn't say anything about manufactured amplifiers, it says kits.
b. In another post on this newsgroup, Riley Hollingsworth also states his side as this:
(Taken, verbatim from ARRL website about Mr. Martin and his Carolinas based business)

The FCC rejected that analysis, however. Hollingsworth emphasized that
�2.815(c) of the FCC's rules requires all external RF power amplifier kits
that can operate below 144 MHz after assembly be FCC-certificated before
they can be made, sold, leased, marketed, imported, shipped or distributed.
He noted that other provisions of �2.815 apply only to certain already
fabricated amplifiers and do not exempt amplifier kits, particularly those
capable of operating between 24 and 35 MHz after assembly.
Hollingsworth said �97.315 also "specifically prohibits the use in the
Amateur Service of an amplifier that the operator had constructed from a
non-certified kit."

Reading comprehension is a bitch. May I suggest "Hooked on Phonics"? It seemed to help
a friend with a 4 year old who wanted to learn to read, and comprehend what they where reading.

The law is clear. You can modify one commercially made non-type accepted kit a year. Just as
you can build it. However, it is illegal to offer for sale the amplifier in the first place. It doesn't say
that an amateur operator in posession of one of them, using it in a legal fashion, after modifying it
to operate within the amateur bands (some retuning is required of some of the brands of shittier amps).

Read it and weep. YOUR God, Riley, has spoken, and disagrees with you.

"Hollingsworth said FCC rules permit an individual amateur to construct or modify a non-certificated RF power amplifier once per calendar year for use at that amateur's own station--although the unit may not be built from a kit--and the amateur may then sell the amplifier to another licensee or dealer. The rules do not provide for mass marketing or manufacturing and marketing kits or assembled amplifiers as part of a business, Hollingsworth said."

"Hollingsworth said FCC rules permit an individual amateur to construct or modify a non-certificated RF power amplifier once per calendar year for use at that amateur's own station"

That is the BIGGEST part that differs with your "opinions". Next time, may I suggest
you actually RESEARCH what your talking about, and have factual evidence to back up
your claim(s).

Your wrong. The FCC states your wrong. The ARRL backs it up. Riley Hollingsworth
IN HIS OWN WORDS states your wrong.

What more do you need?

And what do you know of the truth? LOL! You hide behind your cowardly
aliases!

> Phil, I am telling you, there is no other "secret identity". If you
> think there is then publish it. Put up or shut up.

Pushed one of your hot buttons, huh? I never said you had a secret
identity. *Your* use of the word "secret" gives away your real intentions
here. Another one of your unconscious slips that gives away your true
identity. Your identity is not secret to me or anyone else here who have
paid attention for any length of time.

> Disruptive behavior? Jeez Phil, if me saying "5000 watts is illegal
> on CB" is DISRUPTIVE to you, then don't read the FCC rules

I am sure you will continue your disruptive behavior and post Part 95 for
the 1000 time.

> Those I am in opposition with have no credibility anyway, Phil. Who
> cares what criminals think of me?

You do care. Why else would you continue to disrupt this newsgroup with
your noise? Why else would you hide under your alias "Aaron Voobner"?

>
> > Being the law abiding and
> > upstanding citizens that you are
>
> Who ever said I was? And what do you have against "law abiding
> upstanding citizens"?

I have nothing against law abiding upstanding citizens unless they resort to
the same "criminal" behavior of those they oppose - like you do. You have
no credibility because you continue to hide behind the "Aaron Voobner"
alias. Why would anyone believe what you say when you won't stand up for
your ideals under your real identity.

> Nope. I don't care if criminals think I have "credibility" or not.

Yes you do and you are not credible to anyone here (and that causes you
mental anguish).

Yep, the weather wasn't up to snuff and I had the day off. Result: enough boredom to actually do this:
Between 26.000 and 28.000MHz, there are no less than 1585 ACTIVE site licenses in the US for no less than 1100 individuals, large corporations, small businesses, educational institutions, government agencies, and emergency organizations. And that number -doesn't- include experimental or general coverage sites. This information is from the FCC's wireless communication database. There were about a dozen or so sites within 26.96 - 27.41MHz, but were not included in the count. These site licenses are good for only 10 years. Each year, new ones are granted and old ones are renewed, just like any other band. Without any doubt, the freebander's argument that these freqs are "abandoned" or "unused" is 100% bullshit. That was a great idea, twist! Thanks!

"Wellllll, it WOULD have been if you would have done what you originally claimed you were going to do. You were to contact these entities, not look at a chart. What hapened to that idea? As I said, start with the US forest service and move on to the petroleum companies. from there you can progress to the larger companies. Without any doubt, your argument is 100% garden fertilizer. Since you do not want to what you actually claimed you would do, I am done educating you. Some things you must do yourself. If you aren't going to do what you say, you are welcome to believe anything you wish. Thing is, whether you learn or not doesn't matter much to me. You claimed one thing and here you are claiming victory before you did the acid test. Just 'cause you say it, doesn't make it so. In any event, you are still incorrect for the most part."

Well, I didn't see too many petroleum companies in the list, and not too many forest service freqs, either. Actually, I didn't see any.

"Well, how about that? Someone got around to updating the list you are using. Are ALL the frequencies accounted for that fall between 26 and 27? Better look again. No? Ok, now I will tell you why there are gaps in your chart. Some freqs aren't listed because they are abandoned, no longer used, forgotten, given the 'ol heave-ho for sounder and more reliable modes."

There were, however, a lot of news/entertainment media corporations listed.

"Yea, there are some of those. Many used for remote broadcasts, but if memory serves correctly, most of those are in the 25 area."

Even a couple CB shops. Where did you get your information, twist?

"What information? The forest service? From the forest service. A great way to DX nirvana is a company that went bankrupt or out of business for whatever reason, assigned to, oh, say, 26.390. Still another is the company upgrading their comms. equip. that left behind, yet another abandoned freq. The petroleum industry is even more scattered and not able to tell who owns what. Government petroleum services? Private? Leased freqs? Contracted permits? Temporary use permits,,etc. This goes way further than looking at a chart and saying, "Well, there it is, the chart says so, so it's the gospel." Tell ya' what. I'll even assist you in your endeavor, as I haven't looked into exact leasers/owners of freqs for a few years now. Send me whatever chart or info you can, I'll take 25 and 26, you take 28 and 29, (or vice-versa, doesn't matter) and we'll try and line up who is authorized to talk where. THEN (since it's only half of your, among a few others', arguments) we will contact a spokesperson, if applicable, for each assigned company and inquire about interference for those that actually USE their assigned freqs. No need to mention cb or ham or anything. tell 'em you have been interested in 2 way and employed in radio most of your life and you need the information for an informal study you are doing. Mentioning cb or anything alluding to it is leading the witness and predisposes answers. Besides, if RF interference from barefoot freebanders is as bad as you and a few others maintain, there is no need to mention your allegations, they will flow freely from the companies, no? Let's hit it. Do it right and fair, I'll even give you credit and a copy of the article I'll write about it, regardless of the outcome, unless you're worried about stealing anothers aspiring thunder."

As far as contacting these people, it will happen. I just don't have the ability right now to look up the contact info for 1100 people and email them all, and all in one day.

"You know what, dude? I don't either, but we can make a start. Divvy it up anyway you want, we can do this, maybe not overnight, but I participated in something very similar once before. Remind me Monday and I'll try to find the data I had compiled on the spectrum and I'll post it and we will compare.'

Rest assured, twist, many of them will be notified, and there will be some response.
But the response may be to the FCC, so I won't be able to post it here.

"Well, I'll post what I find. Why would companies begin responding to the FCC out of the blue because of an inquiry from you concerning their bands? If you are that paranoid about contacting them, tell them you are programming a scanner, for crying out loud. And after everything you

have posted in the past, why on God's green Earth would you fret over posting a response concerning a frequency that is available for listening to the general public?"

Just keep on giving me more great ideas like this one, would ya?

"Certainly. You want to earn some money? Hate to stop you when you're doing so well and in such a great mood. I don't hold a grudge..I may be able to show you how to make some cash off your radio knowledge, and whatever else you may retain. There is a market for it all....but you would have to write in my "infantile" style and get past the notion that your personal feelings matter at all to your target audience. Should one be fortunate enough to establish a regular reading audience, only then may your personal opinions be of interest. "Course unsolicited manuscripts and contributions must contain the author's name, address and phone for confirmation of accuracy, credit, and payment. Certain instances may require notarized form attesting to originality and authorization of first time electronic publication rights or one reprint when specified."

To those who have requested "I Work 11-Meter DX... & I VOTE" bumper stickers, please be patient. The first hundred went quickly and I'm ordering another hundred. A further note of thanks to those who knowingly sent monies far in excess of what was needed to break even. Approximately twenty-two of you are paying for the next batch ALONE and one fellow is ordering a lot of fifty to distribute among his friends/associates in So. CA on his own! They should be in hand by mid-next week Thanks again.

TW,
Just for the sake of argument, and in a friendly manner, let me ask
this: And I seem to remember making this analogy before.) Let's say, for
example, you buy a house with a very large lawn.

"(Sigh) You continue to compare tangibles with intangibles. It actually
illustrates little."

In the winter, you don't spend much time out there, but you happen to
notice that neighborhood kids are
cutting across your lawn and wearing a path in the grass. You ask them
not to do this, but they
continue to cut across the yard. You erect a fence, and they jump over
it and continue to cut across your yard, and, finally, you have to call
the law and erect a "No Trespassing" sign to stop
them from doing this. Sure, you aren't "using" that part of the yard,
but does it not belong to you
to do with as you see fit? Let's also say that in the spring, you decide
to have a garden party
on
the front lawn only to find that those kids have cut ruts and worn paths
across what was a beautiful
yard.

"Another tangible."

Now you have to make costly repairs.

"Fine, let's use that example. How is there costly repairs to the
spectrum by me DXing there?"

For another example, let's say that you purchase a nice piece of
property out in the country.

"Property. Same example, and still a tangible."

It has
a lake stocked with bass and catfish, and a cabin where you can spend
weekends or vacations. You quickly pick out a great fishing spot, mark

the property "Absolutely NO hunting or fishing" and return to the city and the daily grind. It is weeks, maybe months, before you can get away to visit
your country getaway. When you do arrive at your country home, you find that not only are people fishing your lake, but they have made themselves at home in YOUR cabin. What harm did these
people do by making themselves at home on YOUR property? After all, you weren't USING it, right? What if you leave your residence to go on vacation, but return in 3 weeks to find that some-
one jimmied the lock, came in and made themselves at home--sleeping in your beds, eating your
food, watching your TV, and using your electricity? What harm did they do? After all, you weren't
USING your house while you were gone, right? Now tell me who wouldn't be super pissed off to
find that all three of the above scenarios happened to one or more people? And all 3 of them are
illegal, or become so when the owner of the property places restricting notices around such as "No
Trespassing", "No Hunting or Fishing". Why are they illegal? Because the offenders are taking ad-
vantage of a situation (the absence or unavailability of an owner) to enhance their own well being or
pleasure at the expense of the owner.

"No. There is no expense to any owner, real or imaginary, of the frequency, by DXing. Almost brings you back to the circular argument of "but it COULD happen." And to that, you know my answer. Probablity must be factioned in. Use the lightning strike, the chances are the same."

The offenders are stealing from the rightful owner or lessee

"I already covered this. If it was actually stealing, like it appears you and a few others want it to be very badly, would there not be a charge of "theft?" How about at the very least, a charge of trespass? No? How about at the very extreme least, a punishment meted out that at least equals the one's carried by theft or trespass? No again? Well, that is simply because the punishment fits the crime and is designed that way to benefit the majority of citizens, not a few overzealous hammies who think they are judge and jury of the air and knows what is best for all mankind and radio users everywhere. Which brings us back to the start:The RF interference problem caused by the majority of freebanders is way overblown, seized upon and hyped by those who have nothing better than a knee jerk response of "it's illegal", followed by tons and tons of conjecture, and not one, not even one single confirmable instance to back that mindset. That hasn't changed at all."

who has fulfilled certain legal obligations (purchase, lease, caretaker, etc) in order to have access
to certain properties. In the case of the residence, the offenders are breaking and entering and

stealing from the owner. The law makes NO distinction whether the owner was USING the property at the time--it is still HIS by virtue of his fulfilling legal obligations that the offenders have not.
The taking of frequencies is no different.

"It is extremely different. Take it up with the courts. They see it differently."

It makes no difference whether the licensee (owner, lessee) is "using" the frequency or not. A "freebander" is stealing from the licensee in the same sense as the above examples because he has broken and entered into an area where he has no authority and no business.

"And you still haven't allowed whether you agree there are abandoned freqs where I claim."

Now, if you discover a subject inside your house after an absence, tell me, TW, you wouldn't be pissed off? You'd either call the law, beat the crap outta him, or fill his arse full of buckshot in righteous indignation.

"Actually, I'd whoop-ass on the dogs for not doing their job."

How DARE that SOB break in MY house!!
That's no different. It's how I feel when I hear a bandit on OUR frequencies below CB.

"Hehehe..I understand Jer. I understand how you feel, and you appear to have some company on the issue. But just because a small segment (and oh yes, it is small, otherwise you are claiming hammies are an apathetic bunch) feels one way, doesn't mean the rest of the segments of society are in agreement. MAtter of fact, ham and cb are so far on the bottom of the "to-do" list, you are lucky anyone at all is giving attention to the ITU and interference."

It pisses me OFF, and I'd like to fill HIS butt full of buckshot! Just like another thread, those frequencies are tools in a toolbox. Until needed, they are put away and might not be used for quite awhile.
But when I "look" in that toolbox, I expect that tool (frequency) to be there ready for use, free from thieves. Have you got kids? I do. And I have had to get after her about going in my tool box and removing tools and not putting them back. When I need a 3/8" socket, and it's not there, then I'm stuck until I can locate it.

"Yea, well you just put a better lock on it, no? The importance and value of those "tools" are refected by the protection, no? The protection of the freeband would be the enforcement, as well as the "locks". The protective locks simply aren't there, therefore, it's not

that valued, nor of a concern...and why is that? Because all the alleged emergency scenarios created by those in here are bunk, absolute bunk. If the feds, airlines, military and local officials aren't interested, but only a small segment of pissed off hammies are, now tell me seriously, Jer, you can not, in all good consciousness and with a straight face, continue to insist that it is an infraction of earth shaking magnitude that affects life and death like a few oddballs in here would suggest. It simply isn't so."

When "freebanders" steal frequencies,

"For all good purpose, I hope you see that it is just those of your mindset that continue to feel it is "stealing". That is your right and I won't take issue with your term again, however, you do realize that if that WERE true, the penalty would be "theft", and it simply isn't."

the owners of those fre-
quencies (tools) must find a substitute. Maybe they DON'T use them
often, maybe you don't
use your circular saw regularly, but you certainly expect it to BE there when you get ready to use it.
Likewise, the licensees of said frequencies expect them to be there when needed. It is still NO
different from breaking and entering an unoccupied house:

"Sure it is, but you don't want to admit it. Millions talk on the freeband daily with no recourse nor fear of recourse. To say the same for B & E perps is ludicrous. The law just doesn't see it your way, Jerry."

both are illegal, and both are wrong.

"Wrong" is a morality call, not a legal term.
As far as illegal, yes. However, if a law is wrong, or if I disagree with it, I may choose to ignore it, knowing full well the risks involved and the willingness to take my medicine, should the time arise."

Best 73

Jerry

"Have a good weekend, Jer. If you can monitor 555, tune on in Saturday around noon or 1 EST. I'll give you the QSY Freq and you can listen all day long and decide for yourself if you are listening to criminals or not, and whether or not some petroleum driver is going to need AM to radio back to the fuel depot for whatever reason down in the 26 area."

Although not all Broadcast Pirates operate in the same way. There are those in small towns that do set it up as a hobby. As they are not in it for the money, they are no threat to other Pirates (if there are others nearby), and so they do not have to worry about the violence. I have met some of these Pirates, and they were as friendly as anyone else you could meet... and no, they were not into drugs, just Radio and music. But just think... If record companies are willing to give "back handers" out to the Pirate operators so their records will get "airtime", they must believe that enough people listen to them.
Regards,
Brainbuster.

"You got that so right. Many local pirate radio stations are put up because of the BS on commercial radio. Do they hurt anyone? Damn right they do!! They deservedly hurt the corporate radio fatcat's pocket that is playing their own game of playola. I say, more power to them."

Look, I am not going to just hand you the information. You have to
work for it, and no one can do that work for you. There are several
possible explanations why my name isn't on the records you got access
to. You need to think "outside the box".

> Why is it also, that nobody by that name exists in the national
> computer database (that includes ALL numbers, even non-pubs
> of telephone numbers in the US? I see you are on the net, so you must
> have a phone line? Not to mention, there are no "Voobner's"
> at all in that database......odd huh? Must be a small family.

Phoneman you should know that there are other ways to access the net
other than a conventional phone line. Why are you guys so lazy? You
want me to do your detective work for you, that's why. If you bothered
to really apply yourselves you would have noticed a Voobner featured
prominently on a certain national cable channel program about six
months ago. Unmistakeable, as he was wearing a name badge with the
name Voobner on it. Nuff said. Get back to work.

>
> Mr.K

By all means, keep it up Phil, it's very entertaining, and you have
the makings of another "Twistedhed" in you.

> i freeband and at times run over 4kw's, so what?

Poof! There goes your creditability right there. Nobody is going to believe you since you don't respect Part 95, spin that VFO knob a bit now you're on the Freeband, spin the VFO a bit more and you're saying screw Part 97 too. Nobody is going to believe different. That's what you're going to have to deal with being a radio pirate. Get use to it.

> if i bootlegged on the ham bands i'd tell you that as well. i'm no coward
> lelnad. i'm not scared to say what i do or believe and i dont feel the need to
> pretend i'm somebody and agree with myself while pretending to be another
> person like some on here do.

Twisted does it all the time, i.e. posting forged messages then replying to them under a different name. He accuses others of doing it too, and you eat up every lie he tells too. You need to engage your brain for once.

> if you knew anything about hf radios or the hf
> bands you would know that a soldering iron isnt even used to modify the 840,
> actually no tools are quired at all.

I know exactly how it's done ----
http://www.mods.dk/mods.php3?radio=yaesu&model=ft-840&selectid=1298#1298

ON local unit, connect tp2003 to ground
Switch radio on
Hold SSB and AM down
Switch off
Switch on
02 OFF will appear on readout
Rotate main dial until 02 ON appears
Press AM NARROW--display will show 7.000 mhz lsb
Press MEM DOWN
Press MEM UP
Switch off radio
REmove earth at TP2003
Switch radio on

You still have to crack open the case to get to the required test points, no different than other Yaesu rigs that require solder blobs to be changed. The simple solder blobs do the exact same thing as grounding the test point does, enables reprogramming the rig's microprocessor. So your point you can mod the rig without getting inside, no tools being require like a screw drive and clip leads, is pure BS.

> it is made by yaesu specifically to be
> modded for full band tx under the mars/cap rules and is very easily done.

Now pay attention Tim I said it does not work on 11m nor the freeband right out of the box from the factory. You need to learn to read better.

> the radio has been sold now and is being proudly used on the freeband still in its
> unmodified state, well unless you call pushing some buttons in the right order
> "being modified"

See the above. And it does take more that a few button presses Tim.

Hey guys! I was wondering I have a 5" magnet mount on my car. I was wondering if I could drive at highway speeds with a center loaded Wilson 2000 Trucker (or similar) antenna held securely? Or could I use a trunk lip mount to hold this antenna in place safely at speed around the 75- 85 mph range.

Hi Mark,

The Polar Diversity Loop. The PDL resembles a Wheatstone bridge circuit electrically. The cross braces are actually made of aluminum and form part of the radiator. The vertical and horizontal lengths of tubing add another 1/2-wavelength so that the ends of vertical and horizontal elements are electrically isolated from each other due to the balance in the bridge configuration. Draw out a Wheatstone bridge and it may help to visualize it (kind of looks like a quad loop as it is normally drawn schematically). The "basket" at the center of the radiating loop acts as a tuning stub and allows either polarization depending on which feedline you are feeding. The RF current flowing in each extra 1/2-wave cross section is in phase with the currents in the quad loop and adds to the gain of the antenna in such a way the is not possible with a normal quad antenna. It is much easier to explain its operation by drawing a few diagrams. It still is considered a quad antenna though.

Why Phil The Anti Group is not breaking any Federal Laws, they are promoting them, the breaking of these Laws is what the Anti Group Opposes. What part of this are you having trouble understanding. No laws are being broke in the NG or by changing names and email addresses, But, running a kw is a Federal Violation, so is freebanding but you already knew that right. No one said we were better, we just aren't Federal Law breakers like the keyclowns. Again I ask of you what part don't you understand.?

> > Phil, What about in your estimation ? they are using those names and
you

your
> own battles. I won't do it for you.

Phil, my question remains why don't you confront the other guys on the NG like you have confront Aaron or any other Anti Member about there actions of promoting legal CB. Phil, Every avenue has been tried to reach out to these guys, Mark Fullers life was threatened, Doug Adair also all these guys used there real name and look what happens Just resounding opposition to Federal Laws, Several members of the Anti Group have had threats made against them for just voicing there opinion against Illegal Cb, they were targeted by members with Gang Like names such as Twistedhed, Landshark, Train,Genocide, Anthrax,peekaboo, concrete charlie, peewee etc so sometimes you gotta get down and dirty Ya know get in the trenches with the oppositin and fight the battle on terms they may undestand. So the Anti movement went flat out guirella tactics to smoke them out of there caves to put an end to the Illegals.
So If your not with us then you are with them and against us. It's that simple we have no fence riders in our bunch. The Antiban Movement will survive no matter how hard you try and destroy it. LOL

Thanks Phil,

I appreciate the explanation. I'll have to read up on the Wheatstone bridge. I know it works well, I just didn't know why. (Although I owned one back in the 80's.) Do you happen to know if it compares favorably to a conventional quad? Take care and 73.

Toll, A few points since when do all different style amps draw the same power.A class C amp draws less than a Texas Star ab amp. Effiecency of the amp will determine what they draw. Leece Nevilles will do over there rated output but lets take 250 amp x 20 volts = 5000 watts of power per alt, times that by 2 alternators 10,000 watts of input power available,a good 32 will hold the bird at 6-7 kw going forward. We see about 15 amps per pill draw. I am sure x force class c amps see the same.

Phil,

There is one big difference between legal and illegal operators: the
law. All this newsgroup bs is legal (except for advertising amps),
but freebanding is not. Stick that in your morality pipe and smoke it.

I talked mobile-to-mobile (barefoot) over 30 miles. Depends on the quietness of the channel, too. I was about 15 miles south of Kansas City, southeast actually, and talked way over into Kansas.

Not the venerable old FT-757GX. Just a flip of a microswitch. You did have to remove some screws to remove a small access plate and push aside a small wire bundle, but a true "cut & solder" mod it was NOT. Take care and 73.

You don't expect me to believe that all of the AKCers, the anti-freebanders, and the anti-amplifier characters on this newsgroup are not guilty of illegal operations themselves? Especially not in light of you and your anti friend's poor behavior here! I would not put anything past you guys. And you can stick that in *your* morality pipe and smoke it Sparky! LOL!

Hmmm, them maybe you can explain why everyone has abandoned all the
even-numbered freqs .... oh, that's right, the FCC assigns them that
way! Since many of the popular freeband freqs land right on top of
the odd-numbered freqs, you need to find a better excuse.

The FCC has all the info I have, you can get it the same way I did.
Then you can do with it what you want, and you don't even have to
share any credit!

I don't feel the need to post any of the responses. The purpose of
contacting these entities has nothing to do with the newsgroup, except
to the point of saying what I am doing. If you want to do your own
little campaign, go for it. Post what you want, the more the merrier.
Personally, I really doubt that you have the ability to convince any
company to ignore their 'lease' for the sake of illegal radio operators,
but I encourage you to try. I'll even post the list when it gets
finished so you don't have to sift through the database freq by freq.

Whaddya say, twist? Are you up to the challenge?

I have found that all the lightning protection you can buy will only
minimize the damage from a direct strike. But static protection is a
good idea even if you never have a lightning storm. I would use a lot
more copper for the ground strap, though. Just strip and braid a whole
bunch of AC power cords -- it's cheap, easy, and a lot better than a
single, solid ground lead.

Yes it does, but as the higher the frequency, the more ground-loss
you will have. At 11m there is quite a bit of ground-loss, almost to
the point of making the band impractical for ground-wave propogation.
I really doubt that UHF will go anywhere on a ground-wave OR by skip,
more than likely the weather conditions were 'just right'.

This is off topic for this newsgroup but I'll take a shot. Are you asking this question in the context of "service robotics"? In other words "social robots" which would support humans while having long term contacts with humans? I think the researchers call this symbiosis (human-robot relationships). The interesting part of this question is one of ontology and how much of the human and robot ontologies need to be shared - what shared values and goals are needed to be able to communicate. A very interesting subject indeed. But before I go on lets make sure we are talking about the same thing.

Right on, Sparks. What confuses is the term 'line-of sight'. All radio
waves are bent to some extent by the earth itself when hit by them so it is
not unusual for lo-VHF radio as CB is to have a range that cannot be
predicted by standard geometry. As it happens, the 25-45 range is the most
affected and guess what, that is where most hiway patrols hung out for many
years until repeaters, etc. allowed VHF/UHF use, mostly for communication
with others.

UHF in this part of the world can have fairly phenomal range if you are hi
enough. I work Sundays for a local bus company using a community repeater
with 5 watt units. We have fairly regularly heard from charters over 100 mi
away but they generally have to be on one of the rivers. Not hard because
I-80 follows the Oregon Trail along the south bank of the Platte from Omaha
and both Sioux City and St. Joe are about 90 miles along the Misery. Maybe
it is a form of tropo ducting, but we like to think it is reflection off the
bugs.

Only for the idiot with a d104 cranked wide open
and a alc that has been turned way the hell up.

> The cleanest possible signal is achieved
> when there is no overmodulation OR ALC
> distortion. That situation is arrived at by
> disabling the ALC circuit so that it can't
> attack a less than 100% modulated signal,

And by doing this, you cut your average power down
3 to 6 times.

Bad post Bill, I am very surprised. If you don't have
ALC in the radio, then using a power type mic can
kill your average power output on SSB, since it will
distort so severely on SSB on the syllibablic peaks.

Some stock microphones (old brick style radio shack)
have the same problem. They have a higher than normal
audio output.

I just have one little question. If the goal of the bumper stickers
is to lead to decriminalization of CB DX on the legal 40, how come
they don't say "I Work DX on the Legal 40...and I Vote" or "I Work DX
on CB...and I Vote"? Instead you use the term "11 Meters" -- which is
what "freebanders" call the part of the spectrum that they bootleg on.
Truckers, locals, and the majority of legal CBers call it "CB", not
"11 meters". Just wonderin.....

You can't even figure out who the fuck your talking to!

The message that was being referred to as a hate message wouldn't be held in the same regard as the "law" provides for.

That was my point entirely.

I have been active on this newsgroup for 5 or so years... I am not Aaron.

Get a life, and drop the Sam Adams (as good as it is), Sam Adams :)

You are getting desperate aren't you? Or are you that dense? Let me clarify it for you. From your behavior on this newsgroup as well as the behavior of the other AKCers on this newsgroup it is not hard to imagine you guys exhibiting the same behavior elsewhere. Such as some of the AKCers operating illegally. K5PF aka QRM2000 aka YRAC is a perfect example of this.

BUZZZ - you lose!

He is a perfect example of a hypocrite AKCer. I know that you feel bad
that one of your kind has fallen. It hurts you so - you cannot stand to
hear his name mentioned. :-)

Aaron's ode to K5PF:

They name thee before me,
A knell to mine ear;
A shudder comes o'er me...
Why wert thou so dear?
They know not I knew thee,
Who knew thee too well..
Long, long shall I rue thee,
Too deeply to tell.

LOL!

And what's wrong with the term "sodomite" ???
Named after the city "Sodom" (and Gomora)
where this (homosexual) and other abhorant
lifestyles were practiced.

> >It berates Chinese as "Canibals" by showing
> >pictures of adult Chinese eating a cooked,
> >aborted human baby. It calls the European Union

IMHO, any society that places so much more "worth"
on male children, to the point of murdering female
babies because they are only allowed (by their govt)
a certain number of children (total), deserves THIS
kind of label.... !

Most of the other stuff I don't necessarily agree 100%
with, but that's just a personal moral choice.

When it's all said and done, all this will be between God
and Hal - then the condition of his 'heart' will be seen.

nuf sed! :)

The modulation meters usually don't work right on SSB.
80% on AM guarantees that you're not overmodulating.
On sideband, use the S/RF meter and just make sure
you're not constantly maxxing it out.

An even better way is to find a nearby (within a few miles)
station and have him listen on an adjacent chnnel while
you increase the mic gain in steps. When he hears you
bleed over, you'll know how much mic gain is too much.

Ground-wave for lower HF can carry for hundreds of miles (check with
the hams for more specific numbers). AM BC can go a thousand or more.
But VHF/UHF has a definate problem where line-of-sight cannot be had.
It may bend a bit, but not much. A friend of mine is working on a type
of 'skip' from atmospheric inversion layers, but it doesn't sound too
promising for regular comm. You might stop by your local library and
check out a couple books on electronic communication, it should explain
everything in detail.

>
> Reads like a classic bit of misinformation doesn't it...

Yet it's true.

> Bill, you are so
> off base.

Fuck you Skipp. You saw my name and you jumped
on this. You're as wrong about this as you were about
how to tune an amp. Just give it up and go home loser.

> Audio limiters and compressors remove leagues more over
> modulation signal damage from any AM or SSB signal vs. any circuit in
> operation without one.

In sophisticated systems perhaps, but in cheap CBs
not at all.

> The mis leading part of Bill's BS is the generic labels thrown in without
> any examples.

Again, Fuck you. You just don't know or won't
recognize the truth.

> Operation of a typical transmitter limiter or compressor
> radio circuit most often does not provide any level of audible distortion.

That's more of your ignorant bullshit.

> Every transmitter mfgr uses them for good reason.

With CBs the absolute cheapest ones are used
just so the manufacturer can sell their product in
the United States.

> The facts:
> The effects of no audio limits cause overmodulation which is big time RF
> Waveform Distortion.

A simple mic gain control deals with that concern.

> A big time reduction in your useful signal and
> generation of mucho unwanted products (splatter).

That's not true either--even though it's a myth
propagated by dildoes like you.

> RF distortion should
> not be directly compared to audio compression or limiting.

Spectrum analysis is the last genuine word.

> Lack of audio
> limiting will very often cause the RF distortion. Any audio distortion is
> for the most part, inaudible.

That's why you test using a local receiver on an adjacent
channel.

> ANY AND ALL properly designed limiter, compression and "alc" circuits
> should cause no audible distortion in regular operation.

Most are not properly designed.

> Bill is in fact
> big time wrong.

Bill is right in every way as usual.

> Broadcast, two-way radio and a gazillion other
> applications clearly prove his statements as BS.

Provide applicable examples.

> Forget that he defies
> every related electronics book in the world.

Of course that's not true.

> : The cleanest possible signal is achieved
> : when there is no overmodulation OR ALC
> : distortion.
>
> They are two different things,

But very common.

> treat them as such. Extra Heavy ALC
> operation as described by Bill results in a compressed sounding signal,
> but no RF splatter/distortion.

That's not true. The reason I described ALC distortion
is that ignorant dopes like you run too much mic gain
thinking that the ALC will provide a "compression"
effect and actually make your signal sound louder.
That loudness is at the expense of spectral purity
just like plain old overmodulation distortion. In other
words, you're not getting away with anything.

> Compressed audio can be cured with the
> mic gain knob.

Not when the ignorant operator thinks the
ALC circuit is doing that for him.

> A radio with no limiter needs to be repaired as it's
> causing splatter up and down the band.

That's just absolute ignorance talking.

Go back a few paragraphs.

> : That situation is arrived at by
> : disabling the ALC circuit so that it can't
> : attack a less than 100% modulated signal,
>
> What is wrong with compressing a signal Bill..?

The attack time is always too slow.

> Your higher level of
> average audio is much louder and clean.

That's not true--what's wrong with you?

> Every single broadcast station in
> the world uses audio alc to bring up their average level of modulation.
> It's big time business...

You're totally wrong. Broadcast stations use
AM and they employ asymmetrical modulation
so that the positive going modulation can go
way over 100% while the negative going modulation
never reaches 100%. That's the trick--and you
don't even have a clue about how it works.

> : and by proper adjustment of the mic gain
> : control.
> : -=[Bill Eitner]=-
>
> Every single operation of an AM radio transmitter without some measure of
> peak limiting will have over modulation problems.

That's just crap.

> You can't hide from it
> and it's sad to see such disinformation posted for all to read.

What is sad to see is such a strong reaction from
someone who really isn't qualified to respond.

> No
> adjustment of a radio mic gain (in a transmiter with the limiter
> circuit disabled) will ever produce a signal as clean and loud as any
> normal well designed and operated radio transmitter with the limiter in
> operation. Fact is fact...

There's no fact there. The opposite is the simple
truth. Don't overmodulate, and don't force a simple
modulation limiter to act--that's how you produce
the cleanest signal.

> Thousands of Books, Engineers and Technicians say you are big time wrong
> Bill.

Actually site one of them specifically
you stinking asshole.

> But don't take my word for it.

I'll never do that.

> Pick up any past or present Radio
> Handbook and read it for yourself.

I have, and my facts stand.

Fuck you you greasy limey prick.
You aren't, and you never were shit.

Ok, so THAT's the crux of your argument: you 'imagine' others behaving
as hypocrites. Well Phil, that's about the weakest substantiation of
an argument I've heard so far in this newsgroup, twist included! Keep
working that imagination, you are getting more humorous with each post!

Hi Darkhorse,

I think Richard was referring to the way people refer to the services.
In the UK, people do tend to refer to that broadcast band as "Medium Wave"
(MW). From Richards post, I assume that the Americans just refer to it by
its
modulation type (AM).

But from a technical point (rather than listeners view), MW is a band of
frequencies, and AM is the type of modulation used. If they started using FM
on those frequencies, we would still call it "Medium Wave".

Most of us hide behind names on here, just like on CB. When you see the kind
of things that can happen, it's not really surprising. Obviously some are
hiding behind several different names, and we can all guess why.

> Notice how QRM free it has been in here lately?

I also noticed some new names appearing. New people to this group are like
busses... you can be waiting for ages, then several appear all at once.

Now why could that be?

> domain where talk is cheap and "flame wars"--or vitriolic exchanges among
> computer users--are commonplace.
> In this digital age, there are no laws that specifically address hate
> crimes in cyberspace.

Hi,

This is only valid where someone can reasonably argue that an existing law does not apply on the internet. As there can be no physical exchanges through the internet, it can be argued that freedom of speach allows you to "speak your mind".

When it comes to "Flame wars", you do not have to read any message on a newsgroup or in your mailbox. Internet users have the ability to block messages from people they do not wish to argue with.
In the real world, there is no device that will block people from making offensive comments to you, and violence is a real possibility. So there are laws available to protect people from such situations, although they may not be easily used.

But there are laws which apply equally to "cyberspace". If you publish another persons copyright on the web, then the laws still apply. Copyright also applies to web pages and other documents placed on the web, although they are available to read without charge, restricted acts still apply unless the copyright owner has specifically lifted these restrictions on that file. You may be able to speak your mind, but any laws regarding false accusations, slander, etc. will still apply.

The problem is that the web is worldwide, and so it can be difficult to enforce a law which was broken outside of your country, specially if the offenders country has no such law, or does not care about other countries.

In the UK, the police have a problem with illegal porn on the net. Porn that would be illegal here (and many other countries) is said to be available from servers in certain rather relaxed countries.
Recently I read in the paper about a chap from my area who got caught using illegal (child) porn sites after "trawling porn sites". They cannot stop the scum from publishing illegal porn, but they can catch the scumbags that visit the sites.

Some site hosts have rules stating that you cannot put any porn or "warez"
(files or links to sites) on the webspace they provide.

Regards,

Brainbuster.

OK, let me have a crack at it:

1. Anyone who removes a modulation limiter, leaves it removed, advocates its removal, or is in the vicinity of a removal is an idiot.

2. Limiters exist for two very good reasons:
a. To prevent audio peaks from exceeding half the carrier which if allowed produces crap, not more modulation.

b. To better the usual 4 or 5 to one peak to average of the human voice to something like 2-3:1, increasing talk power - real audio delivered to someones earlobes. Pushing audio past a limiter is a common stunt in broadcast radio and has been for decades. Take your FM radio and tune it first to a twang or oldies station, then check in with the local classical outlet. The classical people while processed generally do not do so nearly as much; an enraged Mozart freak is not fun to deal with.

Is that short and sweet enough to penetrate the densitude???

Dick NBK

Or a binary counter. I do not know of one that will do such high numbers
in one chip.

The 4024 CMOS chip is a seven stage binary counter. It would take two
of these to obtain a count to 4095. This chip is static sensitive, and
precautions will need to be taken.

For a TTL chip, the 74191 is a synchronous up / down counter. It only has 4
bit output, so it would take 3 of these, but it will go up or down. Supply
for this chip must be a TTL standard 5v supply.

I have more data on these ICs, if it is required.

>how come
>they don't say "I Work DX on the Legal 40...and I Vote" or "I Work DX
>on CB...and I Vote"? Instead you use the term "11 Meters"

Because one full wavelength from 26.9650 MHz through 27.4050 MHz is
approximately 36 ft. or 11 meters. Those who use CB as more of a hobby radio
refer to it as "11-meters," just a matter of semantics. If it makes you feel
any better, it does read "Remove The 155.3 Mile Limit On CB."

> -- which is

>You just need to translate it from keyclownese into English. It really
>says, "I mock the U.S.A. by breaking federal laws... and I VOTE!"
>Kind of scary when you think about it...

Hmmm....

Could the same person who wrote:

"That isn't justification for breaking them. If you feel the laws are unfair, change them. If you don't, then quit yer bitchin."

...and followed up with:

"How about a simple method of accountability, for starters. When the band expanded from 23 to 40, it still required a license. Of course that didn't stop a lot of them, but it helped. Then, implement an adjacent band for FM and/or SSB. The greater complexity of the radios will reduce the moron-count. Or maybe split the band: FM would be good for truckers and mobile; and SSB for those that play DX. That would require dropping the 155 mile limit. To keep power levels from lighting up your pet iguana, make the band partially self-policing. For example, a national organization for CBers could bring civil actions against abusers of the band. In fact, this might be a good idea regardless, since so much law enforcement occurs in civil courts.

That's just a few more ideas to ponder."

...really have lost so much in the translation?

Hello Graham: Trying to trouble shoot any problem while not being there, is difficult at best, But I'll give it a try.

Your transmitted audio should have your voice in with any noise that is near. It is possible that there is a problem with the radio, that even when the ambient noise level is quiet (the Mercury 75 outboard motor is off) that you are transmitting the noise also.

If the transmitted audio is heard with your voice, with the motor off, then thats some loud motor. Is it possible that the radios Mic Gain is turned up too loud, this will cause background or abient noise to be louder than the local low level sound of your voice, allowing the motor to be heard.
Maybe a noise cancelling Mic would help.

You have probably heard some base stations with a D-104 Base Station Mic, having a Pre-Amplifier, that is turned up way too much, you can hear the kids in the background, tolet flushing, the old lady yelling at the guy, the TV audio, ect ect. Reducing the Mic gain so that the local voice talking into the Mic can be heard is all the Mic Gain you need.

Its also possible that a poorly installed antenna maybe causing the problem. The antenna installation needs to be inspected, with attenation at the ground connection, and where it is grounded.

You might also look around the boat with a hand held transistor radio, listening for the "swarm of bees" noise. Then wrap the radio in aluminum foil to make the radio less sensitive to the noise and this may help you find where the noise is being generated from.

Good luck.

Jay in the Great Mojave Desert, ...just down the road ah ways from the fillin station.

>> say the coax is part of the antenna ? If so how many feet should I use LOL

Gee Brainbuster,

My newsreader didn't pick this up, wonder why? I'll address it though. Train's opinion is valued every bit as much as anybody else who is sincerely trying to help. Others may know this particular answer better than he and he may be more familiar with other subjects. The intentions count. Those who post the correct answer in an inflammatory manner are relagated to the bit bucket. (An informed troll is still a troll.) I appreciate all of you who posted with good intentions, regardless of the accuracy of your answer. You gave me more than enough information. To the best of my knowledge, the G5RV uses a portion of coax as part of it's radiating structure

.>Oh no, not that again.

Hi all, I'm looking for a KRIS amplifier (base) that works on 6 and 10 meters.
Either the Mach 3b or Mach 3+3b or the 600SSB. I'd even consider the 200b.
These amps were produced in the early 1970's
These amps have a chrome face plate.
Please e-mail me direct.

Thanks, Mark

I will reveal it to anyone who asks sincerely under their real identity via email. If you want to see the proof you are going to have to work for it. I can't let you be lazy. After all, isn't that how you chide your opponents who are supposedly searching for your real identity? No, I will let you squirm a while longer. LOL!

> And you allege that AKCers operate illegal CB --- but you
> can't prove it. And you claim you have evidence that k5pf is a
> hypocrite -- but you won't post it.

You are being lazy again. The answer is there for anyone to see if they do a simple search of the web. YRAC aka K5PF aka QRM2000 knows it is there - that is why he has remained silent for over a month. He knows if he challenges it I will post the truth. So if you want the proof "Aaron" you're only hope is that K5PF speaks up. I sincerely hope he does because under his real identity K5PF he posts some interesting and worthwhile information.

> Jeez, Phil. See a pattern here?
>
> -Aaron-

Yes I do see a pattern. You are obviously worried. Why else would you bother to put my name in the subject line - I am flattered, but sheesh! LOL!

I'll make a deal with you. For every item of "proof" that you post supporting you claim that "Aaron Voobner" is a real person (and you are him) I will post one item of my extensive evidence of your aliases and real identity. Don't respond with lame suggestions such referring me to your website. You will have to stop being lazy and work for it. LOL! I don't hold on to any hope of you taking me up on this because we all know that "Aaron Voobner" is a fictional character.

And if you truly don't believe that I have the proof of the things you talk about above then kill file me. Why do you continue to respond to me? Each response to me shows your growing concern and contradicts your claim that I am not credible.

Actually I would welcome Paul to post under his real identity. He actually posts interesting and useful information when he is not hiding under the YRAC alias. Unlike some other people here. But his hiding under his various aliases are not going to work anymore.

I let K5PF go on with his deception for over a year - why would I want to prematurely expose you? I am extremely patient. Besides you are assuming that I want you gone. LOL!

Guys, listen:

I see both sides of this argument, and both are right... However both are wrong, too...

I'll explain it as I see it.

What Bill is trying to say is this: if you use your mic gain control to reduce the input to the modulation circuitry in your radio to a point where the limiter wouldn't have kicked in in the first place, your audio will still be clean.. Most CB radios' limiters are piss poor, and don't do the job properly.. Disabling the limiter, and using the mic gain control allows the intelligent user to produce better audio with the radio. Using a spectrum analyzer or the ears of another nearby responsible station can help to set the modulation of the radio to the maximum it will do without distortion and bleedover.

What the others are trying to say is this: Most people don't know how to do what Bill suggests, nor do they care. The limiter circuits in the radios keep the ignorant from splattering over all 40 and causing spurious emissions well above their intended transmit frequency, thus keeping them out of trouble.

Bill is right in that proper use of the controls will yield a clean station. The rest are right in that most people don't know how to properly use the controls on their radios, or don't care to use them properly.

This is just how I see it. I'm sure someone will jump down my throat on this one, but hey, I'm used to it.

That's all fine and dandy, but AOL, your service provider, offers nothing
BUT dial-up connections...

Things found about Mr. Voobner, generally posted by him and unconfirmed,
plus a little research of my own...

1) Website: http://www.geocities.com/aaronvoobner/ Outdated... Created Jan 2001
2) Location: Virginia, near Maryland... Owns a Boat, Lives near a marina...
3) Family: Has an 8 year-old (as of Jan. of this year) daughter, Petulia...
4) History: Served in the military, USAF...

Research results:
1) The name "Voobner" has no records in the Henley Marriage & Obituary Database (which contains records back to the early 1800's), courtesy of: The Library of Virginia...
2) Maryland Marriage Records indicate no one with the name "Voobner" either...
3) www.ancestry.com with one of the most complete family history archives online, all data gathered from the US Census back to the 1700's... No family name of "Voobner," ever!

I lean towards a false name myself... Location and service provider (AOL) are guaranteed, as he isn't able to fake his posting IP address, and comments he has made in past posts (back in the fall of last year, beginning of this year) back up the fact...

Exactly! How many Johnson Vikings or other AM boat anchor ham rigs had CB
type modulation limiters?

No shit.

Effiecency of the amp will
> determine what they draw. Leece Nevilles will do over there rated output
but
> lets take 250 amp x 20 volts = 5000 watts of power per alt,

I have yet to see a 250 amp alternator by almost ANY company, sold as a 12
volt
alternator that will hold 250 amps of output at 20 volts when at operating
temperature.

Leece Neville won't do it, Powerline won't do it, and neither will the
Neihoff. That pretty
much covers most top line alternator manufacturers.

Your math isn't off, its your claim that is.

times that by 2
> alternators 10,000 watts of input power available,a good 32 will hold the
bird
> at 6-7 kw going forward. We see about 15 amps per pill draw. I am sure x
force
> class c amps see the same.

Probably true.. at 15 amps per pill draw, your amp should do about 60 to 70
percent efficiency,
given true class C (which yours, as well as all grounded base ss amps are
not true class C, but
varying class, due to the rectification of drive power on the BE junction).
I'll give you that, though.

However, I still maintain that a 2879, operated Class C, at the power levels
involved, will
do about 20 amps per transistor of draw. Been tested, been proven.

Dirty numbers on the wattmeter don't tell the whole truth.

2X250s will do about 225 amps output at 20 volts, when operated for any
period of time, and the cases get
to operating temperature.

> type modulation limiters?
>
> Phil C

Virtually none because the techniques for AM with tubes are a lot different than with solid state and overmod can be fairly easily recognized from panel meters. There were, however, often diodes across the back of the modulation transformer to prevent attempts at driving below zero to some extent. Clippers were fairly common which is nothing but hard limiting -- brick wall limiting in the vernacular. While not often built into the rigs, external compression was also fairly common which is called soft limiting. And negative feedback kept it to a gentle ladylike belch. But yes, overmod was certainly possible and the Element 3s (Tech and General written) of the vintage went into gory details about it. But remember that AM was virtually dead in the ham bands by the mid 60s, long before the solid state revolution so other than diodes there was not a hell of a lot of choice.

Part of the problem is that the very word 'limiter' gives the idea that some red-blooded American is being deprived of something. So every swinging dick thinks it his right, honor, duty, and privilege to cut the damn thing out. The idea of a limiter came from Edwin Armstrong's FM in the 30's and is normally the last i.f. stage or two that within a broad range eliminates amplitude variation so that the FM detector responds only to apparent frequency swing and not to every static blast in creation. Most FM detectors will handle Ancient Mary if allowed to.

That automatic limiting is not generally built into ham rigs, boat anchors because it was simply not available and new ones because they use processing and bring the results out to a panel meter and depend on the operator does not negate the argument on CB rigs. Yes indeed, you can adjust mike gain and stay clean but to be type-accepted or certificated you cannot depend on operator intervention. The use of limiting allows some automatic compression which helps talk power. CB rigs typically also contain some ALC action to defend the mike preamp against power mikes as well. The resulting

circle jerk is why CBs tend to sound like crap.

This is not to say that it might not be properly adjusted but that would take a tone generator and a scope that are not generally available at Uncle Ernie's Mortuary and CB Emporium nor is a tech with a clue about setting up a trapezoid pattern. Nor, for that matter, are customers who are willing to pay for the honor and leave it the hell alone after it is set up.

Leave the limiter the hell alone.

Same reason why people put my name in subject lines all the time.
Because they want me to see it.

> I'll make a deal with you. For every item of "proof" that you post
> supporting you claim that "Aaron Voobner" is a real person (and you are him)

Your "deal" stinks but hell, you got me over a barrel son, yessiree,
you are a smart one there, Will, or what was your name, Phil, right
Phil. OK, the first item of proof is a personal reference and what can
be better than a real live person? If you send email to n8wwm@arrl.net
and ask him if Aaron voobner is my real name you will get confirmation
in the affirmative. There you go Phil, or was it Will, no matter,
there is your first item of proof, and I guarantee that it is worth as
much as the proof you are going to give me as part of our little
agreement.

>
> And if you truly don't believe that I have the proof of the things you talk

OK, thanks.

Do you consider it a bonus that your bumper sticker also 'speaks for'
freebanders/bootleggers, (i.e. those that "DX 11" outside of the legal
40)?

How many freebanders vs legal 40 users have responded to your bumper
sticker offer?

Respect? What do you know of respect? You mean the kind of respect you
get when make a hobby out of breaking FCC rules? When you put 7 kw on
CB? That's not respect, that's thuggery and ignorance.

The real question is why you do it, Shane. You are a ham. You should
know better. You should realize that Riley will not hesitate to
prosecute you if he catches you during your little multi-kilowatt
excursions.

I had the pleasure of fine-tuning one of these for a driver who had no clue
how to operate it.
What a POWERHOUSE.....
I like the fine-tune feature of the VFO when transmitting, nice rig but i
dont need to talk to people
who i cant hear and therefore could'nt recommend it or anything else that is
highly overpowered
such as these rigs.
If i had to choose it would be the 2970DX and i would add a switch to
disable the amp. when
needed.

>40)?

You know, Aaron, I never quite thought of it like that. You know why?...because it was never meant like that. (Nice try though.) It's a tool, and a legal one at that. They're meant to attract the attention of our elected leadership and if/when they inquire as to their meaning, I'd hope the person explaining would point that out.

>How many freebanders vs legal 40 users have responded to your bumper

I agree. Not only for the aforementioned reason, but a mint example is getting more difficult to come by. They use SMT and if you want to use it on 10-meters, just buy a Magnum 257 or a Radio Shack HTX-10. They're all the same radio with the mods already performed (as designed) at the factory. Good luck and I hope that helped.

Hi, Tim. Astroworld? If you're going on the device that gives you the
free-fall, I'll watch, but I'm not riding! (grin)

Don't forget to stop by Andy's Electronics while you're in town! And have you
ever been to the Radio Shack Clearance Center on the northwest side of town (on
FM 1960)? It's an old grocery store, full of obsolete or returned merchandise.
Some new stuff, too. Plan to spend at least 45 minutes browsing the shelves.

>as close as you live to galveston island and downtown houston you would think
>you could find much better ways to spend enjoying your time then snitching on
>truck drivers.
>

LOL. Good point about all the attractions, Tim. But let's face it....truckers should not be on 10 Meters without a license.

By the way, did I mention the wedding I went to at Astroworld? The park is closed for the winter, but they opened up part of it just for the occasion. The ceremony was held in the Old Dance Hall. The Groom and his attendants each wore a black tux, black Stetson hat, and boots. It looked great!

Then everyone rode the train over to King Arthur's Hall, for the reception. For those who have never been to a Texas wedding, I should explain that BBQ and wedding cake actually DO go well together!

Since I was involved in logistics, I got to spend some time with the Astroworld security guard. I questioned him about their radio system. The place is awesome! Not only do they have 2-way radios, but there are closed-circuit TV cameras everywhere, with a central monitoring point. At one point, I walked away from the group and peered through a chain-link fence. A voice from "nowhere" (hidden speaker), said, "May I help you, Sir?"

Hi everyone,
I have a nice 10-80 meter am/cw transmitter to trade.all kinds of
spare tubes and parts. a whole pick-up truck load. this baby is heavy.
a pair of 810's plate modulating a pair of 813's final
amp in push=pull.4-866A rectifier tubes 2-6b4 and other small tubes in
mod circuit.
Also have a Hallicrafters HT-18 VFO.
pickup in taylorsville,north carolina only.
Trade for any hf gear, amplifiers,tuners etc. vhf/uhf stuff. What do you

have stashed away??
thanks for taking time to look.

Texas Star amps are not as un-efficient as one may think, just because they say class AB doesn't mean anything, the voltage on the base of the "pills" is below the "turn on" voltage of the "pills". In other words they draw just a tad more current than they would if the base of the pills were DC grounded. If you run the Texas star on a power supply that runs higher voltage than normal and the voltage at the base of the "pills" is raised in doing this to about .685 or so then you will see the Texas Star start to draw some current and in most cases with the TS line the become very unstable.

Hi Scott,

Just seen my typing mistake... I put an i where I should have put a d, and so
the second sentence disagrees with the first.
In fact the second one disagrees with itself.

I must proofread more carefully to see if I any words out, or make
any spilling mestakes.

Regards,

Brainbuster.

I don't see any inconsistancy there, if that's what you are trying to
say. I would like to see the 250km limit removed, and I would also like
to see a few more watts on the band. But I don't hold my breath waiting
for that to happen. If CBers can't operate responsibly with 4 watts,
the FCC sure as hell isn't going to give them any more space to abuse.

Since you ask, the described amplifier is illegal under FCC rules Part 97
section 2.815 which says the following:

[CITE: 47CFR2.815]
Sec. 2.815 External radio frequency power amplifiers.

(b) After April 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or
lease), or import, ship, or distribute for the purpose of selling or
leasing or offering for sale or lease, any external radio frequency
power amplifier or amplifier kit capable of operation on any frequency
or frequencies between 24 and 35 MHz.

It appears that asking for such an amp is not illegal, but offering one would
be in the US. Being a ham or not is not relevant in this section.

The limiters in CB radios work just fine unless they are clippers, then
they tend to make the audio sound trashy. Clippers are no longer used
in CBs, especially when it's real easy to make a logarithmic amp that
will do the job much better.

Eliminating the limiter is a bad idea because unless you have a quality,
real-time audio spectrum analyzer, you won't see the vocal harmonics
that send your bandwith into the nearby channels, or audio peaks that
jump past the modulation limit. Without the limiter, the operator would
need to turn DOWN the audio level in order to get the same low-distortion

allowed by a limiter. And don't forget that most of the crappy audio is usually caused by crappy mics.

You want a loud, clear radio? Dig up a Shure 57, plug it into a good compressor, and use a foot-switch to key. It works better than anything else I have seen. But don't expect anything better than AM BC quality, because there isn't enough bandwidth per channel.

There is nothing wrong with the limiters in CB radios -- the problem is the operators that want more than the band can allow.

Not continuous, not without having to purchase alternators on a regular basis.

If you claim that you can, and get longwinded, and have it work the way it is supposed to, your looking at 5K of harmonic input.

Wait, next your going to tell me that it is output power at 5kw, right?

Doubtful

We run better or equal antennas as you do.

So, yes, power IS the deciding factor, when running a stacked set of
mono-band 7 element antennas.

Power IS the deciding factor.

>
> Respect? What do you know of respect?

Attempts to turn the conversation around, with the same questions or statements one asks of you,
without answering or responding to them, make you look like the fool, AGAIN, Aaron.

You mean the kind of respect you
> get when make a hobby out of breaking FCC rules?

I am very respected. In the 11 meter circle, in the computer networking circles, in the local
auto racing circles.

Seems I am respected a lot more than you on this newsgroup, as well, Aaron.

Gee, I bet that really chaps your rearend, too.

When you put 7 kw on
> CB? That's not respect, that's thuggery and ignorance.
>

Actually, you just mixed adjective descriptors with adverbs.

Again, Aaron shows his intelligence level is lower than that of the average 7th grader.

> The real question is why you do it, Shane.

Aaron has a (suspected) sexual fixation with some guy named Shane who also lives (I assume) in Texas.

I honestly can't figure out why he would constantly bring him into his conversations otherwise.

You are a ham. You should
> know better.

Yes I am.

I also enjoy high power CB operations.

You don't.

I can accept that. You are the one having the problem here Aaron... Among your MANY other
problems posed and shown to the collective newsgroup.

You should realize that Riley will not hesitate to
> prosecute you if he catches you during your little multi-kilowatt
> excursions.

I hope he does. If and when I break the law, I should be punished.

However, I doubt that will ever happen, since one cannot be caught doing what one doesn't do.

>
> > Have a nice day Aaron. Your still fulla shit.
>
> Same to you.

Yeah, but at least I answer and interject to peoples comments directly, not just attempt to turn
the conversation over back to them as quickly as possible. Some day you will learn the gentle art of debate.

Until then, your in a class below most of the people who post on this reflector that actually do know what
they are talking about.

Not if it was a grid, screen or plate to fils short. Then the full voltage
would
appear on the rest of the filaments being fed off that transformer.

That is the reason that you see so many transformers advertised in
Peter Dahl's catalogs that have multi kilovolt insulation ratings.. So if
they get a plate to fils short, the xformer will live (which is oftentimes
as
expensive as some of the other components).

Telestar, Teletec and John Boy all make commercial multi 250b amps.

A company in Florida also makes one (currently). However, it doesn't
support 10 meters AT ALL.

Even if you ship it back for repair, and PROVE you ahve a license enabling
you to use full power on 10,
they remove it upon shipping it back.

Nice company, huh?

I also have some schematics of a multi 250b autotune amp that a gent from
Australia sent me. Kick ass amp.

Maybe Skipp would like to add it to the Sonic Server?

---

250 klick? Is this another US term that I should know?
Anyways, when CB was legalised, it was allowed as a CB service. There are a
few factors which will have affected the decisions made...

1. It was designed as a "CB" service, with very few rules.
2. Those making the original rules could not have been too technical
(look at the old antenna rule... lol).
3. We were only allowed FM, no SSB. This reduces the chances of DX.
4. No directional beams. Again reducing the chance of DXing.

Yes, DX is possible... but with 4 Watts FM, it certainly isn't reliable
enough to replace the telephone service to other countries. I do not believe
that it could possibly be seen as a threat to the telephone companies.

There is one rule that may be of interest to you...
" Please note that this licence does not permit:
(a) Use of the following equipment:
(iv) Devices to allow a CB Station to be interconnected with the
Public Service Telephone Network

At the time CB was first legal, the telephone service was part of the GPO
(post office). The telephone service was privatised, and became British
Telecom. Now the monopoly has ended, and so many companies offer a
telephone service. If you do not have a cable service, you can have a small
white box attached to your BT socket, and calls will be routed through
another (usually cheaper) supplier.

> would extend from 300 KHz to 3 MHz.

Not quite. Medium Wave refers to a particular broadcast band that you
probably just call AM. We also have a similar broadcast band we call Long
Wave (LW), and this also uses AM.
We still use all the general frequency groups that you do... LF, MF, HF, etc.

> Shortwave, I suspect, is another term for HF (high frequency) which extends
from 3 to 30 MHz.

No, just another broadcast band. But it does take up part of the HF area.

To add to the confusion, some older UK radio dials were calibrated in meters,
and others in KHz and MHz. Boy, did this confuse the public or what ;~)

Regards,,

Brainbuster.

Hi Moparholic,

I can see why more ISPs are demanding caller ID is enabled before they
connect you. Much easier to stop the internet abusers permanently.

Do they have a caller ID system on the telephones in the US?
In this country, you can have a box which displays who is calling before you
pick the phone up. These boxes also store the last 50 callers numbers.

Regards,

Brainbuster.

> lots of email there.

And now you will get lots of "spam".
This is why most people hide their real e-mail address. Some companies
believe that if you allow your e-mail address to go on the internet or
newsgroups, that you must actually want to receive their "spam".

My ISP believes that their customers have absolutely no right to protect
themselves from the spam machines, and that your e-mail address must
become public knowledge if you use newsgroups.
So, I am looking for a decent ISP, one that will allow me to protect myself
from unsolicited junk mail.

Yes, there are a few slang words that mean something different here...
A "Bum" is what you sit on.
A "fag" is a cigarette.
An "Ass" is a donkey.

Another interesting word you used was "intern". In the UK, this word relates
to prisoners. So I did wonder why these people are allowed to make the
laws ;~)

> I will defer to your knowlege of sheep

What are you suggesting? I am only saying what I heard :-)

> even if the EU calls half of them goats;

Ah yes, the EU. They have strange ways to justify their existance. They
seem to spend their time deciding such important issues as:
How bent a banana must be to classed as a banana,
How long a banana must be to be legal to sell,
What shape a strawberry must be to be classed as a strawberry.

So you will have to excuse me when I prefer to be called English, rather than
European.

> the OMA on my address is Omaha NE. In this part of the world,

There has just been a report on the news about tests carried out into BSE in sheep - does it exist. They have spent much time and public money on these tests, and were just about to release the results when they discovered an important fact... The samples of "sheep brains" were taken from COWS.
Years of tests and funding lost because someone could not tell the difference between Bovine and Ovine.

I just hope these scientists could tell the difference on sight.

Hi,

A few years back, our main UK national radio station started getting rid of the "wrinklies". It seems that anyone over about 30 was too old to be a DJ, and experience counted for nothing. Some of the DJs that went were very good at their job. One in particular was one of the DJs that sung the song "Convoy GB", a comic UK version of the US song. He was rather publicly verbal about this issue... good for him.

It has been said that certain legal stations also take cash for records getting airtime. There have been complaints for years about the alleged record chart fixing, where the record company pay for the record to be number one. This pays for itself when the teenagers (read sheep) all go and buy the record because they think everyone else is, and it must be good, because the DJ says so.

VHF FM broadcast transmitters are so cheap to make, anyone with a good music collection could set up a small pirate station without to much effort. Our FM broadcast band is becoming rather crowded, so it could be difficult finding
an empty space now.

Regards,

Brainbuster.

From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3BD24C8C.D7E864A1@qnet.com>
Source record: 101247

Hello Bill:

The little will has a internal Impedance Matching parts that are will easily change the tuning or SWR on the Little Will Antenna.

Because the antenna is shorter than the norm, more magic must be performed by the internal antenna's impedance matching circuit.

The Impedance Matching Circuit consists of a parallel tank circuit, a coil and capacitor, and then a series capacitor, then a series coil, then the antenna. If you replaced the coax in the base of the antenna, and some how disturbed the small coil turns, by squeezing them together (will make the antenna work at a lower frequency) or spreading the turns farther apart (will make the antenna work at higher frequency) by reassembling the plastic cover over the base assembly, will if you not real careful change the little coil turns, that has heat shrink all over it, just for the reason to hold the coil turns in place. The smaller coil and the two capacitors, can be carefully placed underneth the main coil, and checked out for SWR before the plastic cover is put back on, permently. But then again it must be rechecked.

Good luck. It ain't an easy one is it!

Jay in the Mojave

OK, but if your goal is to work within the legislative system to
change what you feel is an unfair restriction on an unlicensed,
low-power, local 2-way radio service, shouldn't you be working on
coming up with reasons why this proposed change would be beneficial
and fair rather than merely promoting widespread disobeyance of
existing laws?

To All:

Sorry it has taken so long, but Bigradios.com is back up.

Their was a problem with Network Solutions, and they turned off the routing
to bigradios.com, leaving us dead in the water.

Now, we are paid up for another 2 or 4 years (who knows, we made 2 payments,
let's see if they both take. Otherwise, I am just out the 70 bux for the
first payment)

Sorry about the downtime, and look for some changes to be coming soon!

>What kind of truck you got?

Typically the outlaw CBers who "compete" to see who can output the
most outrageous number of watts create a powerplant by loading up the
engine compartment of a 1980's vintage Chevy Suburban with
alternators. The "32 pill" refers to 32 RF power transistors lashed
together Jethro Bodine-style in order to produce upwards of several
thousand watts of overmodulated, unfiltered RF which results in a
broad, spectrally dirty signal that freely propagates harmonics across
many frequency bands. The truck itself is likely festooned with
antennas sporting 1/4" copper coils, more for show than resonant, and
often features some inane slogan (e.g. "World Wide SkullCrusher")
decaled across its side windows.

He said the only one's left on 27 MHz are your basic head cases and a few nice truckers.

Some years ago, the police department in Stevens Point WI convinced a local bartender to move his 'noid bar (paranoid, humanoid, android) two blocks from the police station to minimize the effort for the gendarmes to round up the usual suspects. I am beginning to have that deja vu feeling about CB. Maybe the FCC is just keeping all its nuts in one bag.

Your reply on the little wil caused me to wake up and remember the old Moseley beams. They are the standard trap tribanders except that one trap rather than two did both 15 and 20. Old Man Moseley found a combination of trap values and stub that resonated on both bands when mounted on the usual 10 meter beam. As I recall, the trap was actually resonant about 27.8 and the elements, at least the driven one, were isolated from the boom.

When I get back from my Sunday job tootling budding young Baptists thru the boonies in a big yellow school bus to finance this electronics habit, I plan to do a Google search for EZNEC2000 and DIPOLE1, two well-recommended software packages to see what idiocy they support. The ARRL site has one that might be of interest as well.

Seems to me that a 6-10-12 should not be impossible to whomp up that might offer both a neat mobile and a shortened beam that would be sex on a stick where you didn't have two acres to rotate it in.

Does that come in a mag-mount model?

> Power IS the deciding factor.

I don't think so, toll. You, like many of the other misguided souls in
this newsgroup, have misconstrued the meaning of the word "communication".
It's not about 'power'; it's about control, cooperation, and courtesy.
With nothing more than a stock CB, I can communicate with anyone anywhere
on the planet. I can also win a keydown against the biggest amp you can
find. It's easy. All you have to do is know how to communicate.

BTW, in reference to your recent comments regarding grammer, I can send
you the same book I offered to give to twist -- it will define for you
the 'preposition', and it will explain how it's something you shouldn't
end a sentence with. (pun intended)

>Whad he say?

He said that the Citizen's Band is overrun with "cretins" and "depraved hooligans" who break the law. We (the good citizens) must take back the Citizen's Band from them (the bad citizens) and turn the "silly band" back into the "Citizen's Band."

He then goes on to complain about how the "pirates" and "bandits" have "the nerve to petition the FCC seeking changes to CB FCC Rules that would make their illegal activities legal." He's actually referring to RM-9807, a petition started by an Amateur Extra to drop the 250km contact limit on the CB.

Answer: Nothing new. Gosh, he sounds a whole lot like somebody else I know?
Take care and 73

I do and I believe Bert is.

>I would like to see the 250km limit removed, and I would also like
>to see a few more watts on the band.

Me too. Out of curiosity, what would you like to see the power limit set at?
I've always fancied 35 watts. (P.E.P.)

>But I don't hold my breath waiting
>for that to happen.

Well, he's being proactive rather than waiting. What's wrong with that? Nothing
ventured, nothing gained.

>If CBers can't operate responsibly with 4 watts,
>the FCC sure as hell isn't going to give them any more space to abuse.

Do you mean ALL "CBers," Frank? Should the DPW stop building more roads because
there are allot of bad drivers out there? I say bring back licensing and
administer a written Morse test and grant DX privies to those who pass. Take
care and 73.

Mark

P.S. Hope my Yankees beat your Mariners. Good game yesterday, hats off. :-)

>existing laws?
>
>-Aaron-

Hi Aaron,

If that were the case, there'd be no RM-9807 or any type of campaign to "Remove The 155.3 Mile Limit On CB." In order to allow the "widespread disobeyance of existing laws," all Alan, Bert, myself, or any other interested party need to do is nothing. It'll happen all on it's own. While this will unlikely ever come to fruition, it does demonstrate the correct way to go about challenging an unjust rule/law. Take care and 73.

I have noticed recently that I have had to turn my squelch way up, almost to the end, to get the noise level down. I have checked the coax to the antenna, it is side mounted 108" SS whip that checked out fine for SWR. It doesn't seem to be as bad on other channels, but channel 19 is outrageous. Is it just the amount of traffic on 19?

2174. OT: The monkey...

Newsgroup: rec.radio.cb
Date: 2001-10-21 14:00:14 UTC
From: Brainbuster <brain@buster.com>
Message-ID: <9qvs2cvdk1@chilli.nntp.netline.net.uk>
Source record: 101305

A guy walks into a bar with his pet monkey. He orders a drink,
and while he's drinking it, the monkey jumps around all over the place.

The monkey grabs some olives off the bar and eats them, then grabs
some sliced limes and eats them, then jumps up on the pool table,
grabs the cue ball, sticks it in his mouth and swallows it whole.

The bartender screams at the guy, "Did you see what your monkey just did!?!"
The guy says, "No, what?"
"He just ate the cue ball off my pool table, whole!", says the bartender.

"Yeah, that doesn't surprise me," replied the patron. He eats everything in
sight. I'll pay for the cue ball and stuff." He finishes his drink, pays his
bill, and leaves.

Two weeks later he's in the bar again, and he has his monkey with him.
He orders a drink and the monkey starts running around the bar again.
While the man is drinking his drink, the monkey finds a maraschino cherry on
the bar.
He grabs it, sticks it in his butt, pulls it out, and eats it.

The bartender is disgusted. "Did you see what your monkey did now!?!", he
asks.
"Now what?", responds the patron.
"Well, he stuck a maraschino cherry up his butt, then pulled it out and ate
it!"

"Yeah, that doesn't surprise me," replied the patron. "He still eats
everything in sight, but ever since he ate that cue ball he measures
everything first!"

Brainbuster.

It's called 'skip". It's the sound of a million people talking at once.

All my channels were pretty quiet this morning except 19, hit 2 lights
on my PC-122. So it's normal for 19 to be noisy.

Doesn't matter Aaron.

The Digi-Scan is type accepted as long as the instructions are followed implicitly (this only applies to the DS-40 and the Digi-Scan UFO and the RDS-1). Those models have transmit inhibit in them.

Their is nothing wrong with modifying a CB radio for receive only, which is what the digi-scan does.

Your comments are therefore off topic.

I sure do. What's wrong with getting the politicians' attention? Those are
great ideas you have, but they won't just magically happen. It takes effort,
and even so, it won't happen all at once. RM-9807 was defeated, but that's no
reason to "roll over and play dead." Let 'em know people care. There are plenty
of responsible CBers that would like to see the 155.3 mi. rule dropped and from
what I read, that includes you. You, I, nor anyone else should have to curtail

our legal efforts to effect FCC rule changes because of other's misdeeds.

Perhaps the same reason you always appear to come to Aaron's rescue, but likely not.

I see that I've not figured out how to effectvely block/filter out home.com posts on my CompuServe newsgroup preferences. I can only filter the 'subject' line, not the 'from' line. I thought perhaps it might pick up my e-mail/IM attributes but alas, no. If anybody knows how to do this in CompuServe, please let me know.

Hi Brainbuster,

That's pretty interesting. If you don't mind my asking, how did Britain get around the ITU treaty agreement re. the allowing of DX on CB? There are some here that have said that the ITU treaty agreement te. this only applies to amateur radio, not CB. Hence, the argument that the ITU treaty agreement used as an argument against allowing DX on CB is just red herring. Feel free to e-mail me on this. I find it quite interesting.

I'd heard this as well. To bad their final edition has that cheap looking foil sticker on the base and head. I liked the black, almost metal plate looking, sticker on the head only. I also wish they'd bring back the TUP-9 G.T.T./P.T.T. with the true (shiny) hammerlin base. I'm looking for a MINT example if anyone out there's got one.

> sincerely under a verifiable identity and email address. I will be glad to
> answer your questions under those circumstances.

Hi Phil,

As you have made the suggestions in the newsgroup, you must believe that the issue is of interest to all newsgroup readers.
This being so, the full info must be of interest to all the groups readers, and you really should post the full info in the same manner.

Remember that YOU are making the accusations... so it is YOU who should back them up. If you dislike Aaron so much, why are you using HIS tactic of calling people "too lazy". Is it not being lazy when you will not take a few seconds to place the info in a news message that you will be posting anyway.

If you are not willing to post the "evidence" in this newsgroup, then you should not have posted the accusations that way. If this is a private argument between you and Aaron, then please make it so... take it to e-mail.

My request was sincere, look at the other posts in this ng... you will see that I am no friend of Aaron. The difference is that I have blocked him (and other offensive Trolls) from this computer, and if I need to block him under other identities, then I would like to know. You could also block Aaron, and save yourself so much grief.

The use of "handles" is common with CB, I do not know any CBer in the UK who uses their full name , they all use "handles". Most of this groups users, post using nicnames, and hide their e-m addys from spam machines. So do you class the rest of us as being the same as "Aaron"??

As for internet identities, "brainbuster" is my identity with the ISP. My full (ISP varified) e-mail address and website URL are both available to you, within this newsgroup... just three mouse clicks away. I do not hide behind anon web-mail accounts and re-mailers as some do.

Regards,,

Brainbuster.

HUH?

Mark,

That already exists in the form of the Amateur ticket! The fed already said
they would not create
or sanction a "duplicate" ham service--which is exactly what that would be.
IMHO, I really believe that the popularity of CB as a "hobby", for which it
was never intended, was to keep FROM having to have paper licenses or take
tests. I know it sounds harsh (not meant to flame, however), but I
think the answer lies NOT in granting CB more "hobby" privileges, but
enforcing the existing rules
aggressively and forcing CB to become what it was originally intended for--a
very economical, local family and business band. Then let those that wish
to work DX apply for the Amateur ticket.
All that stuff about elderly men griping all the time on ham radio just
isn't true. Yeah, yeah, go on about 3950, et al, but there are so many
other frequencies/bands where such is NOT going on, and
one can have a ball--like I did yesterday sitting in the mobile. I had a
very nice QSO with a gent in
Liepzig, Germany on 10 meter FM simplex. VERY nice fellow. There is so
much to offer in the
Amateur Service, the license is so easy to get, the only person you "harm"
is yourself by not obtaining one. I know, too, that some guys are motivated
by the thrill of operating illegally and hoping not to get caught. I know
that seeing how much power one can achieve is a thrill to still
others. And, no doubt, the feat of successfully running 10,000 watts out of
a Suburban is no small
accomplishment--although, personally, I am afraid of RF that can cause a
tape to jump out of the
cassette deck! LOL! Still, there are many other kinds of achievements that
can be done on
Amateur Radio as well--many of which are quite legal and parallel to that of
CB as well.

Someone sent me a question on the Wilson Little Will CB Antenna, with a bounced e-mail address?!?!? The antenna users are complaining about the cheap shit coax that these store bought antenna come with. By replacing the cheap RG-58 type coax with RG-142B or even RG400 Teflon type dielectric coaxes, the coax is bullet proof and lasts for years and years. It even has a slightly higher loss than the RG-58 type coaxes, but the gain or trade off is in the durability and long lasting ability to stay the same value, and handle high power levels (under 1KW), for a long time. However at $1.25+ a foot, its not cheap, but in the long run you won't have the coax arcing over, or detearating over time as with the cheap RG-58 coax. So maybe its cheaper again in the long run.

I have heard of the Moseley single trap beams, but never installed one or used one.

I have folks wanting a beam antenna made, for various bands. With a little testing it appears that on some antennas with insulated elements, driven and the reflectors and directors, there seems to be a better performance in some. KLM sold VHF beams with injected moulded plastic blocks that mounted to the boom, that held the elements in place. Wonder why?

Ah yes a little Churching up never hurt anyone.

Let me know how you make out there.

I have suspicions that some of the software programs aren't as accurate as they can be. But I am not smart enough now, to say anything more on this, until more field testing is done.

I presently Use Eznec, by Roy Lewellen. He has been a real help in some problem solving in his programs. Will worth the the price of admission.

> Seems to me that a 6-10-12 should not be impossible to whomp up that might

> where you didn't have two acres to rotate it in.
>
> Dick Nï¿½BK

I have many requests for a broad band beam antenna that would operate between 24 and 54 MHz. The first thing that comes to mind is a Log Periodic. But how about a simi broad band beam working from 24 to 30 MHz, again maybe a Log Periodic, or other type design? This will separate the boys from the men.

6-10-12 shortened beam antenna ah? Will if you design it, I can build it.
Half to run down to Los Angles next week and buy more aluminum tubing and such.

Right now working on making up assembly directions and such. The last 4 photo shoots have not turned out at all. And I have hired a Professional Photographer for the photos. And working a parallel effort with computer made drawings.

Permit me a couple of queries, if you will.

1) How do you propose to get the treaties amended to allow FCC to do this? I seem to recall that
one of the things FCC had to do to get a CB Radio Service was to limit its legal range in order to
prevent its competing with the world's Amateur Services. The proponents of expanded CB "privileges" seem to ignore the fact that FCC doesn't control the world's radio spectrum, and we must make, agree to, and abide by treaties and agreements with other countries who have different
uses for the same spectrum.

2) Considering that CB was never intended to be used as a hobby, how are the rules that govern and restrict it to its original purpose "unjust"? How are they "unjust" when an alternate radio service has been available since BEFORE CB was conceived to allow a person to do all the things people want to do on CB, and do it legally? Again, the rules and regulations governing BOTH services have their origins in treaties and international agreements.

They exist. They were originally for the convenience of call centers, etc.
but they found a way to sell the info to us consumer bees.

Brainy:
A lot of things can be said of this, but what can you say of the 6th plank agency in the UK that has liberal Tony baloney Blair at it's head, coupled with the fact (?) that there are MANY MOOSELIMS in the UK, and why would they want to hear THE TRUTH anyway? UK turning commie? I thought they were already socialist-commy! The REAL question IS: DID the broadcasted services cause ANY interference to anyone, or is that a smokescreen for for Tony Baloney to push for more communism against the GOOD NEWS, since Tony himself is an Anti-Christ buddy to Anti-Christ Billy Clinton! Blimey! I wish you Britts would vote him out, IF you can!!!!

What is the maximum power allowed?
The maximum transmitter RF carrier power output allowed is 4 Watts and the antenna is restricted as described below. (In the case of equipment with an integral antenna, the maximum effective radiated carrier power is limited to 4W).

>Bert do you always filter those you disagree with ? Filter me so I won't
>have to read your stupid responses to me.

No, I don't. I only filter those who make personal attacks upon others they disagree with. If you'd done your Google homework a tad more thotoughly, you'd find that I have had plenty of meaningful discussions with those whom do not share my views, nor I theirs. As I've said before, it's not always what you say, it's how you say it. Calling people names and the use of profanity, directed at an individual, is sufficient cause to no longer read the offender's posts. Ninety-nine percent of the time, I've always tried to discuss issues with an even head. I'll usually meet a personal attack with a bit of humor to see if I can lighten things up a bit. If I can't find th appropriate level on which I can "reach" that person, then there's really nothing left to talk about.

Why should he turn his RF gain down, so it won't be as sensitive? It is called HETERODYNE and IS the skip, thousands of people talking the same time over a thousand miles! It makes 19 the most fameous channel or freq. in da spectrum! No where else can you hear that beautiful Heterodyne noise! It's not N8 approved!
Dave!!!!!!!!!!!!!!!!!!

Dr. StickyFingers:
What a bunch of SAD news this is on MY CB NewsGroup! Guess what is next: Discontinuing BASE STATIONS ! (how much longer?) They should of at least waited until next spring, when the Winter Base Station season was at it's end. Maybe they did this now to boost sales for the upcoming winter BASE Station season (if there really is one this year)!
I guess We will have to get one, since I have a stock '76 "8" stand D104 new in the box, as well as the '76 GOLD Bicentennial edition D-104 NOS in the box too! I wonder if they will stop their mobile production of the D104. I doubt it. All I got to say is that my past is slipping away faster every day, which makes my neck REDDER by the moment. Commies: shed your Red hammer & sickle for a RED Neck instead. Yo will be glad you did!!!!!!!!!
Dave!!!!!!!!!!!!!!!!!!!!!!!!
Dave!!!!!!!!!!!

twistedhed@webtv.net (Twistedhed) wrote in message news:<24470-3BCEDD72-172@storefull-123.iap.bryant.webtv.net>...
Yep, the weather wasn't up to snuff and I had the day off. Result: enough boredom to actually do this:
Between 26.000 and 28.000MHz, there are no less than 1585 ACTIVE site licenses in the US for no less than 1100 individuals, large corporations, small businesses, educational institutions, government agencies, and emergency organizations. And that number -doesn't- include experimental or general coverage sites. This information is from the FCC's wireless communication database. There were about a dozen or so sites within 26.96 - 27.41MHz, but were not included in the count. These site licenses are good for only 10 years. Each year, new ones are granted and old ones are renewed, just like any other band. Without any doubt, the freebander's argument that these freqs are "abandoned" or "unused" is 100% bullshit. That was a great idea, twist! Thanks!

"Wellllll, it WOULD have been if you would have done what you originally claimed you were going to do. You were to contact these entities, not look at a chart. What hapened to that idea? As I said, start with the US forest service and move on to the petroleum companies. from there you can progress to the larger companies. Without any doubt, your argument is 100% garden fertilizer. Since you do not want to what you actually claimed you would do, I am done educating you. Some things you must do yourself. If you aren't going to do what you say, you are welcome to believe anything you wish. Thing is, whether you learn or not doesn't matter much to me. You claimed one thing and here you are claiming victory before you did the acid test. Just 'cause you say it, doesn't make it so. In any event, you are still incorrect for the most part."

Well, I didn't see too many petroleum companies in the list, and not too many forest service freqs, either. Actually, I didn't see any.

"Well, how about that? Someone got around to updating the list you are using. Are ALL the frequencies accounted for that fall between 26 and 27? Better look again. No? Ok, now I will tell you why there are gaps in your chart. Some freqs aren't listed because they are abandoned, no longer used, forgotten, given the 'ol heave-ho for sounder and more reliable modes."

There were, however, a lot of news/entertainment media corporations listed.

"Yea, there are some of those. Many used for remote broadcasts, but if memory serves correctly, most of those are in the 25 area."

Even a couple CB shops. Where did you get your information, twist?

"What information? The forest service? From the forest service. A great way to DX nirvana is a company that went bankrupt or out of business for whatever reason, assigned to, oh, say, 26.390. Still another is the company upgrading their comms. equip. that left behind, yet another abandoned freq. The petroleum industry is even more scattered and not able to tell who owns what. Government petroleum services? Private? Leased freqs? Contracted permits? Temporary use permits,,etc. This goes way further than looking at a chart and saying, "Well, there it is, the chart says so, so it's the gospel." Tell ya' what. I'll even assist you in your endeavor, as I haven't looked into exact leasers/owners of freqs for a few years now. Send me whatever chart or info you can, I'll take 25 and 26, you take 28 and 29, (or vice-versa, doesn't matter) and we'll try and line up who is authorized to talk where. THEN (since it's only half of your, among a few others', arguments) we will contact a spokesperson, if applicable, for each assigned company and inquire about interference for those that actually USE their assigned freqs. No need to mention cb or ham or anything. tell 'em you have been interested in 2 way and employed in radio most of your life and you need the information for an informal study you are doing. Mentioning cb or anything alluding to it is leading the witness and predisposes answers. Besides, if RF interference from barefoot freebanders is as bad as you and a few others maintain, there is no need to mention your allegations, they will flow freely from the companies, no? Let's hit it. Do it right and fair, I'll even give you credit and a copy of the article I'll write about it, regardless of the outcome, unless you're worried about stealing anothers aspiring thunder."

As far as contacting these people, it will happen. I just don't have the ability right now to look up the contact info for 1100 people and email them all, and all in one day.

"You know what, dude? I don't either, but we can make a start. Divvy it up anyway you want, we can do this, maybe not overnight, but I participated in something very similar once before. Remind me Monday and I'll try to find the data I had compiled on the spectrum and I'll post it and we will compare.'

Rest assured, twist, many of them will be notified, and there will be some response.
But the response may be to the FCC, so I won't be able to post it here.

"Well, I'll post what I find. Why would companies begin responding to the FCC out of the blue because of an inquiry from you concerning their bands? If you are that paranoid about contacting them, tell them you are programming a scanner, for crying out loud. And after everything you have posted in the past, why on God's green Earth would you fret over posting a response concerning a frequency that is available for listening to the general public?"

Just keep on giving me more great ideas like this one, would ya?

"Certainly. You want to earn some money? Hate to stop you when you're doing so well and in such a great mood. I don't hold a grudge..I may be able to show you how to make some cash off your radio knowledge, and whatever else you may retain. There is a market for it all....but you would have to write in my "infantile" style and get past the notion that your personal feelings matter at all to your target audience. Should one be fortunate enough to establish a regular reading audience, only then may your personal opinions be of interest. "Course unsolicited manuscripts and contributions must contain the author's name, address and phone for confirmation of accuracy, credit, and payment. Certain instances may require notarized form attesting to originality and authorization of first time electronic publication rights or one reprint when specified."

2240. Recent Info

Newsgroup: rec.radio.cb
Date: 2001-10-21 20:10:54 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <A2GA7.26181$B3.694293@e3500-atl2.usenetserver.com>
Source record: 101199

The following is reprinted from the public record and is available thru
various sources including
the ARRL web page.

I know some folks scoff at the notion that FCC cares about operation of CB
radios, but the
following is evidence that enforcement is coming back into full swing.
Little by little, more and
more, the activities of unlicensed stations, the use of uncertified radios,
the proliferation of amps
are coming under scrutiny. Now, in defense of those who believe they are
"immune" to FCC
enforcement do to "lack" of license, or their belief that the authorities
don't care, there is some
reason to have believed that in the past. After all, FCC was AWOL from
enforcement for the
past 10 years or so. Riley Hollingsworth will tell you this without
reservation. However, he will
also tell you that the times, they are a-changin', and that this is no
longer the case. His program,
basically, has followed an outline, and he has kept to it.

1) Clean up and weed out the unlawful and undisciplined hams that were
giving US Amateurs a
bad name. He has and is continuing to do this.

2) Go after the ones who are encroaching onto the ham bands, particularly
onto 10 meters. He
promised that the 10 meter line WILL be defended. Not only has he gone
after these, but he
has hit other unlicensed persons using Amateur gear on VHF and UHF such
as hunters and
even trucking companies. So much for "private" or "company" channels.

3) Go after the sellers of "export" gear by hitting truck stops and CB shops
that specialize in
these illegal products as well as the amplifiers. This is why Mr Martin
down in SC got hit
recently--as much to prevent their use by CBers as it was because of the
"uncertified" issue.

The part we cannot see is the connection to the ITU issue we discussed here
recently. The activi-
ties of the LOUD and PROUD have been noticed by other nations and their
users of the spect-
rum. It has generated complaints, not only about the US CB operators, but

about the activities of
operators in other countries as well. It is partly due to these
international complaints. partly due to
domestic complaints, and partly due to the complaints of international hams
(about CBers on the
10 meter band) that this is happening. Expect actions such as below to
increase as well as
individuals being cited for their use of illegal equipment. Perhaps, not on
the scale of a military op-
eration, but it will become regular enough as to be risky at best and
downright expensive at worst.

The truck stops and adjacent CB shops are easy pickin's, and you can expect
FCC to take ad-
vantage of that.

I don't post this to cause flames or arguments. Indeed, I won't take part
in flame wars. I just post
information with which you may agree or disagree. Just read it, take
precautions if you are so minded, or ignore it and continue to operate as
you see fit.

Best 73 to all,

Jerry

Gentlemen:

This is an official Citation issued pursuant to Section 503(b)(5) of the
Communications Act of 1934, as amended (the Act).

On July 23, 2001, agents from the Federal Communications Commission Portland
Resident Agent Office observed that the following uncertified Citizens Band
(CB) radios were displayed and offered for sale inside TRUCK-N-TRAVEL store
located at 32910 East Pearl Street, Coburg, Oregon 97408: 1)
Galaxy DX99V
$439.99

2)
Galaxy DX88
$399.95

3)
Galaxy DX66
$280.00

4)
Galaxy DX33HML
$239.80

5)
Delta Force
$200.00

The Commission's records show that the above CB radios have not been granted an FCC equipment authorization. You are hereby warned that the marketing of those CB radios, including advertising, is a violation of Sections 2.803, and 15.101 of the Commission's Rules and may violate Sections 2.925 and 2.926 of the Commission's Rules. 47 C.F.R. Sections 2.803, 2.925, 2.926 and 15.101. Violation of the Commission's Rules is punishable under Section 503(b)(2)(C) of the Act by a monetary forfeiture of up to $10,000 for each violation per day, up to a maximum of $82,500.

Further investigation revealed that TRUCK-N-TRAVEL is registered with the Oregon Corporations Division as Eugene Trucking Haven, Inc., 800 Willamette Street, Suite 800, Eugene, Oregon 97401.

In accordance with Section 503(b)(5) of the Act, you are being given a period of 14 days from the date you receive this Citation to submit any statements you wish to make concerning the violation. In addition, you may request an interview to discuss this matter in person at the nearest Commission's office.

The Privacy Act of 1974, P.L. 93-579, December 31, 1974, 5 U.S.C. 552a(e)(3) requires that we advise you that the Commission's staff will use all relevant material information before it, including the information disclosed in your reply or interview to determine what, if any, enforcement action is required to ensure current and future rule compliance.

The knowing and willful making of any false statement in reply to this notice is punishable by fine or imprisonment under Title 18, United States Code, Section 1001.

Sincerely,

Binh Nguyen
Resident Agent, Portland (Oregon)

CC:
John Anderson, President
Eugene Trucking Haven, Inc.
800 Willamette Street, Suite 800
Eugene, Oregon 97401

Editor's note: The FCC advises that some of the five models of CB transceivers listed above were capable of operating on 10 meters.

Might be------until you happen to land on the wrong frequency. Like the 2 guys who landed on
one of the "wrong" frequencies around here about 18 months ago. Certain "report" sent thru
channels to USAF Frequency Management, thru channels to FCC, uh er, them thar boys ain't
been heer'd since. LMAO! ROTFLMAO!!

A while back some pro-illegal newsgroup regulars posted the name,
callsign, and phone number of a ham --- and strongly suggested it was
Sparky. They further suggested this ham be called and harassed using a
cheap long distance service.
You can have three guesses as to what happened next.

Agreed, it is very interesting. What do you think it signifies, if
anything?

BTW, right now I have a very selective receiver tuned to 29.017 AM and
can hear distinct spurs from illegally high powered outlaws on 27.025.
If I tune to 28.000 I can hear CB-type conversation in AM every 25
khz or so up to 28.125. If I can hear this stuff, then I'm sure ARRL
and RSGB are aware of it too. I think it would be improbable that
these orgs would want to be associated with this type of activity or
even the suggestion of it. What do you think?

I have no problem with trying to change the law. I just think there
must be a better way than to display a bumber sticker that says to
the lawmakers, I want the law changed, I'm going to break it until
you change it, and if you don't then I won't vote for you.

The laws affect all CBers, and it is the behavior of the CB community
as a whole that will be judged. As far as your license/code test goes,
it's no different than getting an amateur license. Besides, nobody will
bother since they get away with it now anyway. The changes must apply to all.

> P.S. Hope my Yankees beat your Mariners. Good game yesterday, hats off. :-)

Time will tell. It would be nice to see somebody else take the ALC
once in a while, and it would be a kick and a half to see Randy pitch
against Moyer in an NL park! (BTW, have you seen Moyer's wife? That's
one extraordinary babe!)

Why do you want to remove the limit? You know it will never happen in your lifetime, the worst part is your a Ham why not upgrade and talk legaly around the world. Why put all the effort into something which has a snowballs chance in hell of changing.

>
> > You a lifetime
> >Cber at heart Egbert.

It would be more fitting to the NG, do you think the CBers of the Ng really care if your a Ham, perhaps if you keep giving out bumper stickers but why not post your SSb Club sign at least they will know who you are if they ever hear you talking on Cb band.

Ox-en-dent-al:
What do you suggest that the Little Man CB shops sell instead of said alleged "illegal" radios & linears under communism? Are you willing to train or put your $$$ into helping these small family run CB shops already hurting (in this current DEPRESSION we are in now, since a year and a quarter ago?) because of a govt. controlled communist world wide "global" economy CRUNCH done by the men on top, coupled by the tidal wave that hit on Sept. 11th, that caused almost EVERY business to take a hit? Or are you just an OLD LADY that is so rich that you don't have anything other to do than to take the side of the oppressors? SHAME on you!
Dave

No, Aaron, they don't. That's the difference between the ARS and the
license-free radio services like CB. In addition to caring about our
own enjoyment of radio, we hams also care about other people's
enjoyment of radio. They don't.

Source record: 101300

I do not understand why you are so fixated on 'communism' when that system basically failed
over 10 years ago.

As long as the products and servicices you offer are legal, you have nothing to worry about.
And there's nothing "alleged" about it--those Connex, Galaxy, certain Rangers, and others are
illegal to use on CB and illegal to sell.

With that in mind, and your rant about the "threat" of communism, and your "rights", what about
the rights of the people whose operations are impeded by the proliferation of amps and encroach-
ments onto their frequencies. huh? Are you saying that THEY don't have any rights to use the spectrum, or that YOUR version of freedom should take precedence over others'?

If you must interpret it as taking sides, yes, I have never made it a secret of my disapproval of
illegal radio operations. The difference is, I can debate the issue without resorting to 3rd grade
name calling and childish antics. Yes, I happen to be licensed to operate on several of those
frequencies you call "freeband", and what about MY rights to the free and unrestricted use of
said frequencies? Just today, I sat and monitored one of those frequencies and all I heard was
squeaks, beeps, farts, ridiculous echos, and childish antics such as belching and playing music.
Those are those "freebanders" you so stoutly defend. What a waste of RF "acreage", and, yes,
I make no bones about it: if I hear someone locally operating on those unauthorized frequencies,
he's gonna get reported to the military authorities. The simple truth is, you can attempt to justify
it til you're blue in the face, but these people have NO business on there, and it doesn't make
any difference whether there are legal stations there every day or never, try defending the illegal
use of spectrum to a Federal court. It won't fly.

The sad thing is, in the '60s when people exercised courtesy and restraint, and amps were rarely
heard of, I used to sit in my bedroom on an old Raytheon 5 channel CB and

talk for a 10 mile radius on a back-of-set antenna. People would talk for 5-7 minutes and clear out or stand by
for a break. CB was a useful tool. Now it is virtually useless.

So. You tell me: what would YOU want CB to be? A totally unregulated radio service whose users can roam anywhere they like and use any power they like at the expense of, not only the
USA, but to the detriment of operators all over the world? WHO else in the world has as free
an access to radio as US citizens, with the exception of, perhaps, Britain? Doesn't sound like
"communism" to me.

Whew! Alrighty then, let's have at it. Jerry, we've discussed this before and I'll give you the same "cut & paste" answer as I did back then. I've never taken any of your posts as flames. Quite the contrary, it helps "open up" a topic and clarify everyone's positions.

"There are those who might say that if you want to work DX then become a licensed amateur or that 11 meters operators are somehow "imitating" amateur radio. I don't' really think 11 meter operators who violate the 155 mile rule are imitating amateur radio. To state such does a great disservice to amateur radio as a whole. Those on 11 meters are responding to a naturally occurring phenomenon, sky wave propagation. Nobody goes out there and says I'm engaging in "pseudo-ham" operations, again, that's experience talking now. Think of the sheer breadth of amateur radio's scope…EME, (Moonbounce) OSCAR, Packet, AMTOR/PACTOR, PSK31, space shuttle contacts, etc…and the list goes on with a variety of bands and modes to boot. Do you really believe that some unauthorized 11 meter operators are imitating amateur radio because they engage in worldwide communications in a 594.9KHz slice of the HF spectrum? Give a little more credit to the full scope of amateur radio than that."

That is MHO. Many may disagree and that's just fine too. I feel enough agree to revisit the issue.

>All that stuff about elderly men griping all the time on ham radio just
>isn't true. Yeah, yeah, go on about 3950, et al, but there are so many
>other frequencies/bands where such is NOT going on, and
>one can have a ball

I agree that not ALL elderly hams are like that.

>There is so
>much to offer in the
>Amateur Service, the license is so easy to get, the only person you "harm"

>is yourself by not obtaining one.

I fully agree with this statement. Gracious folks like you make it much easier, thanks. :-)

>I know, too, that some guys are motivated

>The laws affect all CBers, and it is the behavior of the CB community
>as a whole that will be judged.

Agreed.

>As far as your license/code test goes,
>it's no different than getting an amateur license.

I disagree, it's just a way to comply with the ITU as it's left up to each nation to deternine what defines "Morse proficiency." It's actually a way "around" the ITU. It "might" become moot in 2003, altough I don't think so.

>Besides, nobody will
>bother since they get away with it now anyway. The changes must apply to all.

Too broad a statement but assuming it were a true, it's a far better aspiration to challenge the rule polically/legislatively than ignore it since "they get away with it now anyway."

>BTW, have you seen Moyer's wife? That's
>one extraordinary babe!

Oh yeah! Take care and 73.

HI Mark,

Tnx for the thoughtful response. BTW, all hams aren't elderly, either. Now I'm 53, but my interest
in radio didn't come upon me as a symptom of old age! LOL! It started when I was about 7-8
y/o when I noticed all the stuff you could hear on Dad's old 1940s Philco and I just never got over
it! Some of us are just destined to get hooked on radio. But it is not my only hobby. I have quite a
few: aviation, roller skating, woodworking, and military history.
"Dagnabit, you young(?) whipper-
snapper, them thar CBers age, too!! LOL!

> >
>
> Tah dah!

Many years back, I often used to go out all night mobile with the CB. I would travel to a nearby town which had a reputation for being rough, and earned itself the CB nicname of "Wally Town". This town was said to be so rough, that even the dogs walked round in pairs.

Most CBers in that town must of been keen on sports.... nearly every conversation would end up drifting into debates about the use of Baseball bats.
I heard that they were so keen on sports, that they even took their Baseball bats with them when tracking keyers and music players. Even the "idiots" were welcome to join in (although they seemed to play without a bat).
When they talked about "swing", it had a different meaning to the use of the word on this ng.

As far as rough dudes go, one CBer seemed to stand out as being excellent at arguing... he had an answer for everything, a voice to match his attitude, and he appeared to have an even greater love for Baseball than most.

One evening, I actually got to meet this chap... and his wife. In reality, he was one of the friendliest chaps you could meet.

It was like watching wrestling... all the threats were just for the "show". All the locals knew the score, but CBers from outside the town just kept going... some didn't even dare stop to take a leak.
I wonder how many people take one look at the posts on this newsgroup, and just keep going.

Regards,

Brainbuster.

You have a valid comment and that is something to really think about. I haven't heard a good excuse. reason etc. why on one hand this country can tell some foot solider in another country why he should have disobeyed orders, then on the other hand throw one of our own in jail for questioning theirs. And this issue came up time and again with our guys in Nam. No wonder many don't even want to, or can't, discuss their ordeal over there, even among themselves to this day.

Perhaps you are correct on this one.. I didn't bother to look into it too closely, but to be honest with you, it wouldn't be worth the extra cost in my eyes... Either way, he is on a dial-up, or he pays through the teeth for not only the cost of a ISDN/DSL line or a cable modem. but then the cost of the AOL service as well... His IP posting address changes from day to day as well, inherant with that of a dial-up connection... Now, don't bother telling me that IP addresses can change with any of the other services as well, as I already know that... It's just far more common with dial-up. The whole point of this was that it's 99% likely that he is on dial-up, even though he tried to throw people off by indicating that there were in fact other ways of connecting to the net.

> where aol is LOL. Better do some more research.

I believe you quoted the wrong part of my post there...

Perhaps AOL is located in Virginia... I found more "proof" persay that he lives NEAR Maryland than I found anywhere indicating that he lives in or anywhere close to Ohio... Can you provide "proof" that he posts from Ohio?? I have provided below some "proof" (Relevant part marked with Asterisks) that he at least VISITS Maryland somewhat frequently, which in a way backs up my claims of him being from Virginia, near Maryland... He visits Scotland, MD, which just happens to be out near the tip of the peninsula in Maryland, which, just across the water from it is... Low and behold, Virginia! A perfect trip out of his local marina in his boat...

Good work, Scott,

Busy, busy, busy fingers busy looking for Voobner info 24 hours a day.

Yes, that is THE Buzzy's - the one and only. ***It is sort of a local hangout for us when we visit Maryland.*** Of course my Aunt Pheobe who is my Dad's sister took Fernald's last name when they were married, so of course you will not find a Voobner listed in St. Mary's County. But I assure you, they are as authentic Voobner relatives as you can get.

PS. I have left out their last name for the safety of the foolhardy in this NG. Fernald would not react kindly to being hassled.

Best Wishes,
Aaron

Good question... The largest band stretch I can think of at the moment is
from the radio that covers 24.265MHz to 29.655MHz...

Hello all,

"Tim" says that QRM is from Texas. "Itsallgood" asks for proof that K5PF = YRAC = QRM2000. Others have inquired also. First I have to come clean about something. I have an unfair advantage over some members of this newsgroup in that I have the good fortune to have a network engineer friend at a certain ISP from which certain AKC posts originate. I have promised my friend that I will not post certain information to USENET, therefore, if anyone would like to see proof of certain individuals identities (you know who I am speaking of here) then I will provide it to you if you email me. BUT, I will ask you for some information first which will include a *verifiable* home address and valid email address. Individuals not providing their real identity need not apply. N8WWM need not apply. ;-) If you pass a few simple identity checks I will email you the server logs and misc other ISP info that proves the identity of these people beyond a shadow of a doubt.

But you don't need inside help such as I am lucky enough to have to ascertain the real identity of QRM2000 aka YRAC aka K5PF. Anyone with access to groups.google.com can figure it out. I will not post all of the copious information here - it would take a very long time to do so since the evidence is extensive. But I will post enough to support my assertion that QRM2000 = YRAC = K5PF.

Tim thimks that QRM is from Texas. Well let's see:

Hi, gang! I will be leaving Raleigh on Friday morning, August 17th. I will
travel through Richmond, and up I-95 to WASHDC, Baltimore, to the Phila.
region. I'll spend the night just east of the city in a small town in NJ.

Saturday morning, I will go up the PA turnpike to Scranton/Plains, arriving
about mid-day. In mid-afternoon, I will go to Binghamton, NY for Saturday
night
and Sunday.

The return trip, which probably will begin Monday morning, will be on I-81
back
to Scranton, Harrisburg, Hagerstown MD, and Winchester VA. I'll spend the
night, somewhere. Tuesday, I'll roll down I-81 to Buena Vista, and then will
go
up on the Blue Ridge Parkway. I'll drop down to US-29 around Lynchburg or
Bedford, thence to Danville, then down NC-86 to Hillsboro NC, and back to
Raleigh Tuesday evening.

I'll have the RS mobile in the scan mode, and I'm open to scheduled contacts if
you are along these routes.

QRM

*****<quote off>*****

QRM leaves NC and then returns to NC. Strange... Could it be because he lives in NC?

Here's a post from.radio.cb:

*****<quote on>*****

TWO ROB GAS STATION AT GUNPOINT

Cary, NC. Aug.20---Two unidentified men robbed the Crown station on N.C.55 at
gun point early Sunday, escaping with about $120, Cary police said. The clerk
was not harmed.

(snip)

The taller robber held a semi-automatic pistol. He ordered the clerk to lie on
the floor while the other robber took money from the cash register.

Police said the robber with the gun talked on his cell phone during the
robbery. After getting the money, the robbers headed north in a dark blue
two-door Nissan.

-----The Cary News

*****<quote off>*****

Wow! North Carolina mentioned again! He sure is interested in what goes on in NC! Could it be because QRM lives in NC? Remember the name of the city mentioned above - Cary, NC.

Still don't believe QRM lives in NC and not Texas? Do your own search on groups.google.com on the words QRM2000 and NC. There are scores of posts from QRM to prove he lives in NC. If you need more convincing just ask me to post it, there is much more!

OK, to any reasonable person we have established that QRM most likely lives in North Carolina. Convinced Tim?

Next we need to establish that QRM2000 = YRAC. This is easy:

>Hello Yrac: How did you came by to be called Yrac?????
>
>

Secret code. (Write it backwards). On the air, it's pronounced "Y-Rack".

> I pulled in to a gas
>station for a pack of 20 and 30 amp 3AG fuses,

They probably were looking for the Candid Camera crew! (grin)

Yrac

*****<quote off>*****

Ouch! A post from QRM2000@aol.com (look at the header) that is signed YRAC. Ooops! He forgot which AOL email account he was posting from! See - it takes a lot of effort to be deceitful! 'Gotta watch those multiple AOL mailboxes! LOL!

About the city I asked you to remember - Cary, NC: Write YRAC backwards as YRAC aka QRM2000 mentions above in his message. YRAC = CARY as in Cary, NC. What a coincidence!

OK, now we have established YRAC is QRM2000 and the the alias YRAC is derived from the word Cary. Keep the word Cary and the city Cary, NC in mind - we will come back to them later. Now how do we make the leap from QRM2000 = YRAC to QRM2000 = YRAC = K5PF you say? Let's see:

Hmmmm. Good point for switching to units with CTCSS. As these get popular, there will be annoying Squelch Breaks as units poll for each other.

Paul K5PF

*****<quote off>*****

DOUBLE OUCH!!! Those pesky AOL mailboxes again! A post from Yrac@aol.com (see the header) but signed Paul K5PF. How can this be??? I'll tell you how: YRAC = K5PF.

Next QRM admits his name is Paul:

*****<quote on>*****

Whew! Lew has been busy! I think he's been using my tooth brush, too. I MUST
change the locks on the doors!

QRM (whose name is Paul) :))))

*****<quote off>*****

In his own words - QRM's first name is Paul.

Next one of QRM's personal friends calls him Paul:

*****<quote on>*****

There's a funny thing about the posts of QRM2000, and I'm wondering if anyone
else sees the pattern.

Each one involves either a restaurant or food of some kind.....

But that's not suprising. The first time I met Paul, in Gatlinburg, TN a couple of years ago, guess where the first place he wanted to go with us was?
Yep, to a restaurant. :))) Of course, it WAS suppertime!!! :)))

Nice post, Paul, and hope you can take the poking fun at you!!!

73,
Rick

Many go into sales. Outside sales. Where you can move around. Where you meet
new people all through the day. I was the Customer Service Manager for a large
cosmetic company. Good pay, nice working conditions, and only one mile from my
house so I could go home for lunch. But I felt something was missing. One day
I realized that I was happiest when I was out in the field with our sales
people, or attending one of their conventions.

I finally got an opportunity to break free and went into real estate. I have
never been happier! I recommend taking one of those tests which compares your
skills and interest with folks in hundreds of occupations. That's what gave me
the confidence to make a career change, and it worked well!

Paul

*****<quote off>*****

A message from Yrac@aol.com (see header) and signed Paul. Yrac is into
real estate. Paul - that name sounds familiar! K5PF's first name is
Paul. QRM's first name is Paul. Lets take a look at the K5PF call on
qrz.com:

Callsign:K5PF Class: Extra Codes: HAI USA
Name:PAUL F. FOLMSBEE
Addr1:xxx xxxxxxxxxx
Addr2:CARY, NC 27511
Country:USA

Note: I obscured his street address, no need to repeat it here.

Hmmm! Cary, NC! Sound familiar? LOL!

Lets look at this closer:

*****<quote on>*****

The title of a popular book says a lot about this: "Do What You Love And
The
Money Will Follow."

In my case, it is residential Real Estate.

Yrac

*****<quote off>*****

Again Yrac says that he is involved in real estate. We know that QRM2000 = YRAC = K5PF so Paul K5PF must be in real estate.

From qrz.com's biography section on K5PF:

****<quote on>****

First licensed in June, 1961 as WA4BRS. Licensed as WA5ZEM in 1968. Received present vanity call in 1972. Licensed Realtor in North Carolina. Also holds Life Insurance license in North and South Carolina.. Member National Association of Realtors, AARP, National Consumer Alliance, and Better Business Burea of Eastern North Carolina. Specialist in helping Amateur radio operators locate and investigate suitable properties, negotiate the best deal, and achieve a smooth transaction all the way to closing (settlement). Proud member of the Real Estate Buyer Agency Council, with a designation of Accredited Buyer Representative from the National Association of Realtors. (Fewer than one in 500 agents nationwide has achieved this designation). Owner/Operator of K5PF 10 Meter beacon on 28.256 MHz. Active on 146.88 repeater in Raleigh, NC, and various HF bands--usually on CW. Member, ARRL, 10-10 International, Disaster Emergency Response Association (DERA), and Skywarn.

****<quote off>****

QRM2000 aka YRAC aka K5PF is a licensed realtor in NC - just as he mentioned in his post under the alias YRAC.

First licensed as a Ham in 1961. Haven't we heard that date somewhere before? Of course! QRM said he was licensed as a Ham in 1961!

Conclusion: QRM2000 = YRAC = K5PF.

At this point I will spare the newsgroup any more waste of bandwidth. If it is not obvious to you by now that QRM2000 = YRAC = K5PF then your are either daft (silly, foolish, mad, insane) or burying your head in the rec.radio.cb sand pile.

I encourage everyone to search themselves on groups.google.com to verify any of the information posted about. It is all there, available to anyone ambitious enough to look (and you didn't even need a network engineer friend at his ISP!). There are hundreds of other messages I could post to support what I am saying, but I will leave it as an exercise to the reader.

Excellent analysis. I think you have illuminated the cosmic truth of what is really going on in rec.radio.cb. The toughest, most obscene and violent-appearing ones are actually the least threatening in real life. Speaking of wrestling, there is one guy in here, latest handle is "Anthrax", who makes threats, alludes to killing people, etc. I picture him as weighing about 75 lbs. soaking wet.

Hi Brainbuster,

I do in fact have proof of fictional "Aaron's" real identity. It comes from the same source as the proof of QRM2000 aka YRAC's identity (and it is not from a groups.google.com search). And it is unequivocal. As far as using fictional "Aaron's" "too lazy" tactic - I am only having a little fun with fictional "Aaron". The information will come out in good time - but on my time table. Until then I will give you a little hint: Study fictional "Aaron's" posts (I know there is entirely too many of them!). Compare them to some other ACKers posts, especially some that scarcely post here under their real identity. Go back to some of fictional "Aaron's" first posts to this newsgroup. In each of fictional "Aaron's" posts there leaks out a bit of his real personality. There is a identifiable pattern in his messages that gives his real identity away. He cannot help this because it is an unconscious phenomenon. Only they very talented (after years of study and practice) can suppress this leakage and fool even the trained eye. Some never master writing under multiple identities. Fictional "Aaron" hasn't. I know what it takes to do so and I am unable to master it either.

For good reading see the post with subject "ATTN: Tim, Itsallgood, Others - Ask and you shall receive!"
Before anyone makes the claim again - fictional "Aaron" is not QRM2000 aka YRAC aka K5PF :-)

Hm. 10 "& 11" meter "base" antenna? Why would the 11 meter capability be important to mention in this ad? What ham calls a fixed station a "base" anyway?

>***MFJ-860 30/300 Watt/SWR Meter

Good intentions perhaps, or perhaps just a smoke screen. A CB newsgroup probably isn't a prudent place to advertise a 'ham radio setup'. You may say that there are hams here too, but common sense dictates this isn't the likely place to sell ham gear to hams. That would be like taking vials of morphine to an inner-city gang neighborhood on the off chance that you might find a licensed physician there you can sell them to.

BTW Dave, I am currently designing an antenna that will be a 5/8 wave ground plane. It will have unloaded radials and a radiator that will each be two feet long. Really compact. You might ask how this can be a 5/8 wave. Well, to be honest, it is because I say it is. Wanna buy one?

Randy!!!!!

P.S. It's American made too!

Snip>

> Hm. 10 "& 11" meter "base" antenna? Why would the 11 meter capability
> be important to mention in this ad? What ham calls a fixed station a
> "base" anyway?

Gee....I dunno dickhead, could it be because it is a 10/11 meter
antenna? Kind of nice to know where what you are buying will
operate...eh? Why do you suppose the mfg. advertises them as
a 10/11 meter antenna?
Since when did a 2950 become a "fixed station"? They were
mobile units last time I checked.
Also, I realize you are overrun with ignorance, so I
might point out that it would be a little ridiculous to advertise
an A99 as a "mobile" antenna since it has a length of nearly
20 ft and would look slightly ridiculous mounted on the trunk
lid of your car........moron.
Mr. K

I was talking about output out of the alternator.

OK toll you have run A/C. What alternator and how many do you run for the plate supply on a single 3CX3000A7 with the fils. running on a 165 amp leece?

<cut and paste starts here>

PEACE ACTIVISTS
With all of this talk of impending war, many of us will encounter "Peace Activists" who will try and convince us that we must refrain from retaliating against the ones who terrorized us all on September 11, 2001. These activists may be alone or in a gathering.....most of us don't know how to react to them. When you come upon one of these people, or one of their rallies, here are the proper rules of etiquette:

1. Listen politely while this person explains their views. Strike up a conversation if necessary and look very interested in their ideas. They will tell you how revenge is immoral, and that by attacking the people who did this to us, we will only bring on more violence. They will probably use many arguments, ranging from political to religious to humanitarian.

2. In the middle of their remarks, without any warning, punch them in the nose.

3. When the person gets up off of the ground, they will be very angry and they may try to hit you, so be careful.

4. Very quickly and calmly remind the person that violence only brings about more violence and remind them of their stand on this matter. Tell them if they are really committed to a non-violent approach to undeserved attacks, they will turn the other cheek and negotiate a solution. Tell them they must lead by example if they really believe what they are saying.

5. Most of them will think for a moment and then agree
that you are correct.

6. As soon as they do that, hit them again. Only this time
> hit them much harder. Square in the nose.

7. Repeat steps 2-6 until the desired results are obtained and the idiot realizes how stupid of an argument he/she/they are making.

8. There is no difference in an individual attacking an unsuspecting victim or a group of terrorists attacking a nation of people. It is unacceptable and must be dealt with. Perhaps at high cost.

We owe our military a huge debt for what they are about to do for us and our children. We must support them and our leaders at times like these. We have no choice !

We either strike back, VERY HARD, or we will keep
getting hit in the nose.

I currently do not have a base cb but I have 3 mobile cb's, so I am currently using one of the mobiles (Cobra 29 ltd classic) as a base unit. I am powering it from a car battery charger, but about 2 weeks ago the transformer in the charger started cause major interference to be transmitted from the cb when ever I try and talk. I have hooked up a noise filter between the charger and the cb but it does not help. How can I get rid of the interference, CHEAPLY????

The most likely cause is RF feedback coming back on the shield of
your coax. This means a ground has come loose. Crimped connectors
are bad news. There are other reasons, but a bad ground is #1.

howdy peoples

can someone steer me to a site or provide me with info on the
tuneup/alignment info for the Cherokee CBS-500

Thanks
Steve

80,000 watts on CB? Wow, you must really "not care" about interference
to your fellow CBers.

Sorry to disappoint you but I look pretty much the same as the pics of
me posted on my home page, except for that extra 5 or 6 lbs. around my
middle from Buzzy's creamsicles and Ludmilla's turkey pot pies :)

How 'bout you, Scott? Getting any excercise?

Wow. That was a lot of work for you, Phil. I hope someone appreciates it. Because the rest of us just don't get it. I suppose if we all had a similar crazed infatuation with k5pf, it would matter. But we don't. So it doesn't.

More of interest (at least to me) would be the WHY of it all. Why the monomaniac obsession with k5pf? What did he do to you that would cause you to spend this much time thinking about him?

Hi Jerry,

Thank you, it'a always nice to have a well reasoned discussion. I reread my reply and didn't mean to imply that all hams are elderly. My "oops." My father was big on listening to the aircraft band, I just sort of followed suit. I have a great deal of love and respect for both CB and aamateur radio services. Although I may disagree with some, I hope that still shows through. Unfortunately, I didn't get a chance to answer your other post. I saw it and planned to answer it but had to relinquish the PC to a homework laden teenager. I think my response to Frank (Sparky) answered the ITU question. Take care and 73.

Mark

2348. Skip or Freebanders(?)

Yesterday (Sunday Oct 21) I was down by Lake Ontario (Toronto) and was listening to a couple guys on channel 5 I believe. The one guy said he was in Oklahoma. Not sure where the other guy was coming from. I was listening to this on a handheld Cobra 38WXST connected to a Cobra roof mount antenna in my truck. Was this "skip" I was hearing or was it these people with base stations that have been "slightly" modified? (The signals were quite clear) There was also some guy calling himself "Yellow Jacket"...and he was booming through the airwaves as well, and he had a very strong southern accent. If my term of Freebanders is incorrect, I apologize.

A automomobile battery charger doesn't have the regulation you need
for powering a radio, and some chargers can actually be damaged by
such use. Find yourself a regulated 12 VDC supply. Radio Shaft has
them, and you can probably find one at a yard sale or second-hand
shop for pocket change.

Your squelch circuit may have gone bad or got knocked out of alignment.
You can adjust the squelch amp for many radios, but it's best to get
it checked out at your local shop.

Polymaniac?

> What did he do to you that would cause
> you to spend this much time thinking about him?
>
> -Aaron-

I thought about him maybe for 5 minutes yesterday as I was cutting and pasting. I thought that it is a shame that he felt his arguments so weak that he had to create the illusion of support by posting under different aliases. Funny how YRAC and QRM2000 were always so much in agreement - kind of reminds you of other characters on this newsgroup. When Paul was not consumed by his seething hatred for the "illegals" he actually posted very interesting and useful information to USENET (unlike you in your real identity as well as your aliases).

He made the same mistakes that you have made fictional "Aaron". I don't care if you torment some of the numbskulls that inhabit this newsgroup until pigs fly. Both pros and antis are just plain annoying and deserve the killfile where they have been banished to a life of indifference. But when you began to go after descent people using their real identities (Bert Craig comes to mind) then you came under the same scrutiny as K5PF. The only difference, IMO, is that when Paul posts under his real identity the information that he posts is worthwhile - not so for you fictional "Aaron".

You have lost so much respect and credibility under your real identity that you had to cower behind fictional identities in hope of reclaiming some of that respect, credibility, and agreement. Unfortunately (for you) your basic personality flaw leaks out even under your aliases; you have lost all that you desperately seek under those aliases too.

Maybe fictional "Aaron" doesn't comprehend how many network engineers are affiliated with a certain ISP - a needle in a haystack comes to mind. LOL!

Hi Jerry,

Might I be allowed to take a crack at this one? I'll do so at "great personal risk" as it might be inferred as coming to Mark's rescue. ;-)

"Jerry Oxendine" <joxendi@bellsouth.net> wrote in message news:<pUDA7.24186$B3.673206@e3500-atl2.usenetserver.com>...

> uses for the same spectrum.

I believe you're referring to the ITU treaty agreement regarding Morse proficiency and access to the HF spectrum. (=/< 30 MHz) Well, I had mentioned this earlier and I see Mark expounded on it elsewhere in this thread. Since the ITU requires "demonstrated Morse proficiency" yet leaves it up to the individual licensing entities to define "Morse proficiency," I see no reason why we can't combine Frank's and Mark's idea. The return of CB licensing and the associated accountability and enforcement efforts that come with it. A DX endorsement to said license that comes with the passing of a written test requiring the applicant to match the alpha/numeric/punctuation/prosign character on the left side of the paper to it's Morse counterpart to the right. For example.

1. A ___ a) ....
2. H ___ b) ...-.-
3. L ___ c) .-.
4. SK ___ d) ..---
5. ? ___ e) .-..
6. 2 ___ f) .-
7. R ___ g) ..--..

Get the idea? Hey, if you want to really be politically correct about this. Let the ARRL administer the whole thing and some top league dog can brag about his/her "new initiative" to bring new blood into AR and expose "interested" CBers to the code as well. (All while bringing in extra $$$ to the league.)Licensed amateurs could then Elmer said "interested" CBers on how to properly work DX and bust pile-ups with

12 watts rather than leave them to the "might makes right" crowd. Remember, some of these CBers may have enough interest to be open to a friendly Elmer, but not enough to walk into the local ARC. This may just be the ticket. (Pun very much intended.) Sheesh, allot of folks are crying about how to get new blood into the hobby. Here it is on a silver platter. There'll be a hundred people crying about why it can't happen. Show me one who'll at least try to figure out a way it CAN work and I'll show you a visionary. Dick, N0BK, you asked for the vision...well here it is, man!

Prohibit third party communications. END OF STORY!

Asking for more privileges? No, Jerry. There's no request to open up the clarifiers on transmit, no asking for more power, no lobbying for the expansion of frequencies, and no masked plot to encourage the use and/or legalization of (not-so) linear amplifiers for CB. It's just a request to remove a Part 95 rule/reg that I, and others, think silly and the FCC has acknowledged as unenforceable. Allow folks to utilize the propagational properties of the Citizen's Band. After all, it their band. The FCC also acknowledged that the majority of CB operators are in favor of dropping the 155.3 mi. limit. It's a win-win scenario. Remember, I don't generalize about CBers OR ARO's. So please don't tell me that most CBers are this or most ARO's won't that. Give it a chance.

> 2) Considering that CB was never intended to be used as a hobby, how are the

> BOTH services have their origins in treaties and international agreements.

You already know the answer to this, Jerry. Mark's provided it on this and other forums and I've plagiarized him from time to time to answer similar queries. CB radio, particularly SSB comms. on channels 36 through 40, have evolved into a hobby radio service since it's inception in 1959.(?) I don't consider working DX with 12 watts on five channels to be much of a "competing" radio service to AR. If the FCC believes that it does, it surely doesn't say much for how the FCC regards the ARS. Gee, couldn't MURS be construed as an alternate to 2m? I Read an article in QST that proposed that very question, didn't stop the MURS allocation. I've already addressed the ITU "treaties and agreements" above. Did I miss something, most likely? If I did, challenge yourself to come up with a workable solution rather than a "can't be done."

if all you are running is a 29 ltd radio,you should be able to turn off that noisy charger for the time you are using the radio.that rig probably only draws a couple of amps at most.if the battery is in good condition,you should be able to operate for hours!!! then simply turn the charger on when not operating the radio.is that a cheap enough solution or what!!??
elpasogunslinger :)
good luck,good dx-ing!!

Worried Sparky,

Overly concerned about fictional "Aaron" again? If you want the unequivocal
evidence then all you have to do is email me and ask. Be prepared to
provide a verifiable home address as well as a valid email address. Those
two requirements are simple things to provide if you are not hiding your
identity.

Ken:

It's not a requirement, unless the seller requires it. A seller is not required by any law to sell to anyone. If a HAM won't sell HAM gear to a non-HAM, that's their business.

Funny Bill. Let's see, you have a problem with me right now, and I am going
to come drive the 2000 miles to come see you.

Quit with your veiled threats against people you know aren't going to show
you up.

Me, Clark (remember, your going to punch him in the face over some
"pictures", etc.

And remember
> that words out here aren't going to do it.

Bill:

1. I give a shit about your opinion?
2. I feel the need to defend myself to you?
3. This thread is pointless.

4. Your acting like a child.

Sorry for Bill's outburst. He does this when people tell him he's wrong, and the majority
agrees with the other side. It will subside.

And you never did try to even defend your point, other than "You disagreed with me, so YOU
come out here and I am going to hit you" type of response.

Have a good one Bill. It's time to go to sleep now.

Not going to jump down your throat, but my point is this:

Pull the limiter so you have no compression, and your average power goes
down.

It's not that someone doesn't know how to control the mic gain, its a simple
law
of physics.

Syllabilic peaks will cause you to either have to ride the mic gain (which
nobody here is
that fast controlling a variable control), or you will have to cut it down
so far that
the average speech power is lowered so much that you have defeated the
purpose
in pulling the limiter in the first place.

Don't believe me? Look at EVERY radio station in the world (commercial).
They all:

1. Run a modulation limiter (or)
2. Run speech processor (a psuedo limiter) to keep the peak to average
power ratio small.

Not Freebanders. Freebanders are criminals who operate outside of the
authorized CB frequencies, and are not licensed to do so. What you
heard COULD have been people running criminally modified radio, but
the most likely explanation is that you were experiencing skip. The
10 and 11 meter bands were VERY active yesterday.

I believe it is in the best interest of both 11-meters (Or CB, if you
prefer.) and amateur radio. I thought I'd explained to you that yes, I
fully intend to upgrade to an Extra. If this is your valid e-mail
addy, then let me know and I'll be glad to let you know when you can
check the database for the class upgrade. I will retain my current
callsign. Because I believe in it. If I do nothing then it never had a
chance from the get-go. If it doesn't happen, that's fine, but it'll
never be for the lack of effort. (Which, as I've told you before, is
really not all that much effort at all.)

> > > You a lifetime
> > >Cber at heart Egbert.
> >
> > Yes, that's true and there's absolutely nothing wrong with that.
>
> No I guess not.

I display the same verve and passion for AR too. I'm a lifetime radio
enthusiast. CB just happens to have been the hook that reeled me in,
thus it holds a special place in my heart. If you are of the opinion
that I'm a "keyclown" because I protest the 155.3 mi. limit; you might
want to re-evaluate that assessment.

Perhaps, but so far you're the only individual who has ever objected
to it. It's easily disregardable information. However, for the record,
you can sometimes find me on ch. 36 USB. I very rarely QSO via phone
on CB. You'd think I was a rabid SSB CBer the way I fight for the
band, but I'm really just trying to "give back" to a service that gave
so much to me. If you do hear me, I leave no doubt as to who I am,
giving both #'s (411) and first name right up front. As silly as it
sounds, you can reliably hear me on ch. 14 on Sunday mornings
practicing Morse with my niece. (You might even catch a third party
with the initials M.P.?) That's 27.1250 MHz and although we're using
AM modulated CW @ 200mW, your best bet is to try to tune us in using
SSB. (Either upper or lower will do the trick.) I'll be posting a
separate thread updating everyone on this effort. Believe it or not, a
Radio Shack FRS rig gave me an idea.

> > >I don't come to Aarons rescue I reply to you Train, moped, and almost

Keep observing. That's not a snide remark. You mentioned credibility
below. Like I said, if you've confused me with an amp running
freebander who's just trying to legalize an alternative to taking the
code test...you're mistaken. I happen to know Mark personally. I also
agree with many (But not all.) of his ideas. No crime there. I also
e-mail/IM with others on this newsgroup with whom I do NOT agree. As
long as it's kept civil, that's cool too. Life's too short to have to
lump everything that's laid down by others, sometimes you need to
voice your opinion and be heard. I choose not to insult people while
doing that. I don't violate FCC rules/regs. (And I worked damn hard to
do the 11-meter CB thing LEGALLY!) Plain and simple.

Twistedhed <twistedhed@webtv.net> wrote in message
news:7985-3BD09DDA-44@storefull-121.iap.bryant.webtv.net... "You got
that so right. Many local pirate radio stations are put up because of
the BS on commercial radio. Do they hurt anyone? Damn right they do!!
They deservedly hurt the corporate radio fatcat's pocket that is playing
their own game of playola. I say, more power to them." ---

Hi,
A few years back, our main UK national radio station started getting rid
of the "wrinklies". It seems that anyone over about 30 was too old to be
a DJ, and experience counted for nothing. Some of the DJs that went were
very good at their job. One in particular was one of the DJs that sung
the song "Convoy GB", a comic UK version of the US song. He was rather
publicly verbal about this issue... good for him. It has been said that
certain legal stations also take cash for records getting airtime.

"Good morning, Brainbuster.
Yea..the term "payola" is often used:, in the business it's called
"playola."

There have been complaints for years about the alleged record chart
fixing, where the record company pay for the record to be number one.

"That is business as usual in the states. Just look at all the teeny bop
groups that are being pushed. The actual "talent factor" is second
nature, they want pretty kids as a prerequisite..their talent really
doesn't matter since so much is lip sung and sampled from, among
today;'s youth acts."

This pays for itself when the teenagers (read sheep) all go and buy the
record because they think everyone else is, and it must be good, because
the DJ says so.

"Exactly. Coupled with the fact that most radio stations are under the
umbrella of a few single parent companies."

VHF FM broadcast transmitters are so cheap to make, anyone with a good
music collection could set up a small pirate station without to much
effort. Our FM broadcast band is becoming rather crowded, so it could be
difficult finding
an empty space now.

"Ramsey makes cheap FM transmitters, but they suck. Doesn't take much to
get on the air today. There are several such stations where I reside and
they are all better than the trash you hear from commercial stations."

Regards,
Brainbuster.

lol.

That's Bill's defense to most anyone who argues a point with him now...
Since Dennis isn't here to rip him a new
one when he goes WAY off base.

Oh well, he will cite that he admitted when he was wrong in the past, and
that "makes it all better".

Personal attacks signify someone that doesn't have the technical expertise
to back up their claims, or one that
is fighting a losing battle technically.

Which one is it Bill?

>
> > Modulation limiters
> > make the radio work the best possible.
>
> Retards like you think that way and are wrong.

I guess Collins, Raytheon, Harris, Sunair, Icom, Kenwood, Yeasu are all
retards?

LISTEN UP BIG 3. You guys designing all these big commercial radios are
missing something.

A CB tech says that having ALC, limiters, etc. is a waste of time, and makes your radios not
work as well as without the limiters. Be the first to admit that compression, processing, etc. is
a sham and that running your radio open is the BEST way to go!

God, I can see the QST ads now.

>
> > What about 100 percent modulation
> > works better than 150 percent..?
>
> What about it--it's wrong.

Actually, with no compression, limiting or clipping, it is worse than 100 percent.

When your negative peaks go over 100 percent, you are losing power.

With 4 watts, who wants to cut their average power output down?

Makes no sense Bill.

>
> > Look it up in any electronic text and
> > then tell us what the rest of the world says. You are big time wrong..!
>
> Site your references first--then I'll pick
> every one of them apart.

ARRL Manual
Bill Orr's Handbook.

Their are two.

You go find the pages (since every one has different numbered pages). They are under fundementals.

>
> > : Don't
> > : overdo the mic gain and you won't have a

> >
> > Reads like a classic bit of misinformation doesn't it...
>
> Yet it's true.

Yup. That's why virtually every commercially manufactured radio for ANY service
has one.

We all know the military would want their tech's to yank the limiters out as
well, since
"it makes the radio work better".

>
> > Bill, you are so
> > off base.
>
> Fuck you Skipp. You saw my name and you jumped
> on this. You're as wrong about this as you were about
> how to tune an amp. Just give it up and go home loser.

lol.

Classic case of "Im wrong, but not going to admit it, so let me attack the
person
personally that is proving me wrong, or accusing me of being wrong".

I didn't do that (see your name and jump on it). I read the posts, and saw
that you
where off in left field. I made a post, then went and spent the weekend
with someone else,
rather than sitting on a stupid CB radio newsgroup for the weekend, and that
pissed Bill off.

What also pissed Bill off is the fact that I only responded to one of his
posts, the original one.

That made Bill want to kick my ass (I guess... That's what I read into his
post).

Tell ya what Bill, since YOUR the one with the problem with ME, you come on
down here, and
we can get it on. Otherwise, your hiding behind your keyboard, just like
most people do with
their radios.

Oh yeah, and after our little spat, you will STILL be wrong on these points
lol.

>
> > Audio limiters and compressors remove leagues more over
> > modulation signal damage from any AM or SSB signal vs. any circuit in
> > operation without one.
>
> In sophisticated systems perhaps, but in cheap CBs
> not at all.

My spectrum analyzer proves different. Yes, removing the limiter makes you
"appear louder".

Yes, removing the limiter causes average power output to drop by over 1/3...
More in
most cases.

What would you want? The appearance of "being louder", drawing more
attention to yourself,
and making a nuisance, OR, would you like to have more power output, a
cleaner station, and
be able to communicate farther with the limited amount of power that CB
radio has legally?

Seems like a no brainer to me.

>
> > The mis leading part of Bill's BS is the generic labels thrown in
without
> > any examples.
>
> Again, Fuck you. You just don't know or won't
> recognize the truth.

lol.

Personal attacks again. So far, Bill has interposed nothing technical to
either myself or Skipp...
The two people that are calling him wrong. He just wants to kick our butts.

Eventually I am expecting to hear his daddy can beat up mine?

>
> > Operation of a typical transmitter limiter or compressor
> > radio circuit most often does not provide any level of audible
distortion.
>
> That's more of your ignorant bullshit.

And the ARRL technical staffs, and Collins, and Yeasu, and Kenwood, and the
rest of them.

THE WORLD IS IGNORANT BILL.... YOU TELL THEM!

>
> > Every transmitter mfgr uses them for good reason.
>
> With CBs the absolute cheapest ones are used
> just so the manufacturer can sell their product in
> the United States.

And by changing RC constants, you can make them act any way you want.

That requires knowing how to do that.

If someone can't, the easiest way is to yank that limiter.

Yes, that makes sense.

I would rather sit in my car, one hand on the steering wheel, one hand on my
mic gain, one hand
on my shifter, one hand on ... Well, you get the idea. Just what we need..
Someone sitting behind

the wheel with ONE more control they MUST ride because some CB hack told
them that
removing a limiter is a GOOD thing, and now their radio sounds like shit on
SSB, so they are forced
to ride the mic.

>
> > The facts:
> > The effects of no audio limits cause overmodulation which is big time RF
> > Waveform Distortion.
>
> A simple mic gain control deals with that concern.

As well as lowers your total average power output.

Simple to prove.

Get a high level modulated radio.

Yank the limiter.

Look at the power output on the Bird as you TURN THE MIC GAIN DOWN from full
bore.

Amazing, huh.. As the mic gain is lowered, the swing goes UP?

WTF, how can this be.

Oh yeah, like I said earlier, with no limiter, your negative peaks lower the
output.

But the problem is this: When you do this, your total POSITIVE modulation
also lowers.

TO THE POINT OF WHERE YOU ARE QUITER THAN WITH THE LIMITER.

Been proven, been shown. Ask Gooserider. We had a nice chat about this
about 2 years ago.

This is especially prevelant on the high level regulator style modulators,
since they don't have the
"autotransformer" effect.

>
> > A big time reduction in your useful signal and
> > generation of mucho unwanted products (splatter).
>
> That's not true either--even though it's a myth

No, my specctrum analyzer shows the same thing.

You going to argue with the test equipment now Bill, or want to come kick
the spec-ans ass, as well?

>
> > RF distortion should
> > not be directly compared to audio compression or limiting.

> Spectrum analysis is the last genuine word.

Yes, and it proves the point. As does the AVERAGE wattmeter.

>
> > Lack of audio
> > limiting will very often cause the RF distortion. Any audio distortion
is
> > for the most part, inaudible.
>
> That's why you test using a local receiver on an adjacent
> channel.

The key word in Skipp's statement was "unaudible".

That means that you WON'T hear it on another local receiver.

Besides, the local receiver will be driven to compression on its input,
unless you swamp the shit
outta it.

>
> > ANY AND ALL properly designed limiter, compression and "alc" circuits
> > should cause no audible distortion in regular operation.
>
> Most are not properly designed.

Most limit at 75 to 80 percent. Simple component changes in nearly ANY
radio
will fix that.

And Bill, WTF are you going to do with the radio that HAVE NO MIC GAIN?

>
> > Bill is in fact
> > big time wrong.
>
> Bill is right in every way as usual.

Bill is an egomaniac that can't take being proven wrong. He will get over
it someday.

>
> > Broadcast, two-way radio and a gazillion other
> > applications clearly prove his statements as BS.
>
> Provide applicable examples.

OK "> > Broadcast, two-way radio " Get some schematics and look at them...

Oh wait. Skipp builds commercial equipment as well. Guess he WOULD be an
example, huh?

>
> > Forget that he defies
> > every related electronics book in the world.

>
> That's not true. The reason I described ALC distortion
> is that ignorant dopes like you run too much mic gain
> thinking that the ALC will provide a "compression"
> effect and actually make your signal sound louder.

Actually, I don't run too much mic gain, and I just use the limiter in my
radio.

I don't use the compressor much, but sometimes it does actually HELP me make
a contact
that COULDN'T hear me without it on.

So, the SpecAn shows it, actual on the air tests have shown it, and the
textbooks show it.

BUT REMEMBER, BILL EITNER IS RIGHT!

> That loudness is at the expense of spectral purity
> just like plain old overmodulation distortion. In other
> words, you're not getting away with anything.
>
> > Compressed audio can be cured with the

> > causing splatter up and down the band.
>
> That's just absolute ignorance talking.

Not really. Just listen to channel 18 on a busy night.

Or 3 or 4 channels away from channel 6 when the skip is running.

Oh wait, that on the air stuff is bullshit compared to what Eitner preaches.

>
> Go back a few paragraphs.
>
> > : That situation is arrived at by
> > : disabling the ALC circuit so that it can't
> > : attack a less than 100% modulated signal,
> >
> > What is wrong with compressing a signal Bill..?
>
> The attack time is always too slow.

Then change it.

Radio Electronics (now Electronics NOW) produced a compressor that acted in
real time. They used
a pretty nifty little circuit with a opto-isolator in it. Built one LONG
ago, and it also worked wonders.

So you see, it is possible to build a compressor / amc / alc circuit that
actually DOES work. Just like
the one in my ham type rig. Works quite well, I might add.

>
> > Your higher level of
> > average audio is much louder and clean.
>
> That's not true--what's wrong with you?

HAHAHAHAHHA

Bill states that lower levels of modulation is louder than higher levels.

Get this folks.. A 50 percent modulated transmitter is louder than a 100
percent modulated one.

Shit, we better off by just disconnecting the audio lead, according to
Bill's theories.

>
> > Every single broadcast station in

> don't even have a clue about how it works.

It's called "Log Speech Processing", and has been old news for years.

Wait. A compressor or clipper will accomplish almost the same thing.

They use it in a digital circuit. About the best we can come up with is a
clipper like
Lou Franklin designed in his little catalogs. Those also work quite well,
BUT THEY LIMIT
NEGATIVE GOING MODULATION.

But remember, now Bill is saying that processing is OK (since the radio
stations use it, otherwise,
how the hell do they limit the negative and keep the positive.. Oh yeah,
they have a guy sitting their
getting paid a pile of money to ride the mic gain haha). So, you figure out
who is telling the truth.

Yeah, but that doesn't take into account harmonics, nor does it take into account
IMD. Both of which are indiscernable to the naked ear.

Wait. I think I heard KCBQ doing the same thing when they brought their transmitters up..

Bill is right, the rest of the engineering community is wrong.

Learn how to use the internet and find out yourself.

Besides, having a website that shows illegal operation doesn't violate any laws.

Just ask Hightimes.com, thehive, rotten.com or any of the other millions of websites that show how to make drugs, kill people, build bombs, etc.

Your looking more and more like a troll as the days go on.

And AGAIN, Aaron doesn't admit when he is wrong, either. Take note of this, Riley Hollingsworth. Aaron just spews and spews, but doesn't even bother to check facts, nor does he offer ANY type of rebuttal when he is wrong. Just continues on his crusade.

Seems like a throwback to Clintonia, doesn't it.

Recent Info
Group: rec.radio.cb
Date: Sun, Oct 21, 2001, 4:10pm
From: joxendi@bellsouth.net (Jerry Oxendine)
The following is reprinted from the public record and is available thru
various sources including
the ARRL web page.
I know some folks scoff at the notion that FCC cares about operation of
CB radios, but the
following is evidence that enforcement is coming back into full swing.
Little by little, more and
more, the activities of unlicensed stations, the use of uncertified
radios, the proliferation of amps
are coming under scrutiny. Now, in defense of those who believe they are
"immune" to FCC
enforcement do to "lack" of license, or their belief that the
authorities don't care, there is some
reason to have believed that in the past. After all, FCC was AWOL from
enforcement for the
past 10 years or so. Riley Hollingsworth will tell you this without
reservation. However, he will
also tell you that the times, they are a-changin', and that this is no
longer the case. His program,
basically, has followed an outline, and he has kept to it.
1) Clean up and weed out the unlawful and undisciplined hams that were
giving US Amateurs a
        bad name. He has and is continuing to do this.

"I don't see this as the case at all. I see the same busts that have
always taken place...of people that cause severe and repeated problems.
Nothing more nothing less."

2) Go after the ones who are encroaching onto the ham bands,
particularly onto 10 meters. He
        promised that the 10 meter line WILL be
defended. Not only has he gone after these, but he
        has hit other unlicensed persons using Amateur
gear on VHF and UHF such as hunters and
        even trucking companies. So much for "private"
or "company" channels.

"There has always been enforcement, to a certain extent, no matter how
minor. To recognize it for anything else other than what it really is
wishful thinking."

3) Go after the sellers of "export" gear by hitting truck stops and CB shops that specialize in
these illegal products as well as the
amplifiers. This is why Mr Martin down in SC got hit
recently--as much to prevent their use by CBers
as it was because of the "uncertified" issue.

"There has always been a case to feed to the media and it will continue as such...biz as usual."

The part we cannot see is the connection to the ITU issue we discussed here recently. The activi-
ties of the LOUD and PROUD have been noticed by other nations and their users of the spect-
rum. It has generated complaints, not only about the US CB operators, but about the activities of
operators in other countries as well. It is partly due to these international complaints. partly due to
domestic complaints, and partly due to the complaints of international hams (about CBers on the
10 meter band) that this is happening.

"I was just about to ask you about these "complaints" and their origin when you included the hammies. I submit these are the majority of the complaints. Can you give me a link to the ITU?"

Expect actions such as below to increase as well as individuals being cited for their use of illegal equipment. Perhaps, not on the scale of a military op-
eration, but it will become regular enough as to be risky at best and downright expensive at worst.

"Exactly, so expensive that I do not believe for a second that the FCC will receive additional funds for cb enforcement unless it comes from a private party or the ITU themselves, for one, because they can't demonstrate a problem severe enough to justify the expense. The FCC has no plans for a budget increase. Matter of fact, they may be facing more budget constraints in the very near future. Take into consideration that they are barely functional now in the area of enforcement concerning freebanding cbers and you can probably see why I think this is off the mark."

The truck stops and adjacent CB shops are easy pickin's, and you can expect FCC to take ad-
vantage of that.

"As they always have."

I don't post this to cause flames or arguments. Indeed, I won't take part in flame wars. I just post information with which you may agree or disagree.

"Which is why you should speak your mind more often and to hell with who thinks what. Some of these canines may even learn from you how to

facilitate a strong debate without insults."

Just read it, take precautions if you are so minded, or ignore it and continue to operate as you see fit.

"And it is much appreciated and informative."

Best 73 to all,
Jerry

Gentlemen:
This is an official Citation issued pursuant to Section 503(b)(5) of the Communications Act of 1934, as amended (the Act). On July 23, 2001, agents from the Federal Communications Commission Portland Resident Agent Office observed that the following uncertified Citizens Band (CB) radios were displayed and offered for sale inside TRUCK-N-TRAVEL store located at 32910 East Pearl Street, Coburg, Oregon 97408: 1)
Galaxy DX99V
$439.99
2)
Galaxy DX88
$399.95
3)
Galaxy DX66
$280.00
4)
Galaxy DX33HML
$239.80
5)
Delta Force
$200.00
The Commission's records show that the above CB radios have not been granted an FCC equipment authorization. You are hereby warned that the marketing of those CB radios, including advertising, is a violation of Sections 2.803, and 15.101 of the Commission's Rules and may violate Sections 2.925 and 2.926 of the Commission's Rules. 47 C.F.R. Sections 2.803, 2.925, 2.926 and
15.101. Violation of the Commission's Rules is punishable under Section 503(b)(2)(C) of the Act by a monetary forfeiture of up to $10,000 for each violation per day, up to a maximum of $82,500. Further investigation revealed that TRUCK-N-TRAVEL is registered with the Oregon Corporations Division as Eugene Trucking Haven, Inc., 800 Willamette Street, Suite 800, Eugene, Oregon 97401. In accordance with Section 503(b)(5) of the Act, you are being given a period of 14 days from the date you receive this Citation to submit any statements you wish to make concerning the violation. In addition, you may request an interview to discuss this matter in person at the nearest Commission's office.
The Privacy Act of 1974, P.L. 93-579, December 31, 1974, 5 U.S.C. 552a(e)(3) requires that we advise you that the Commission's staff will use all relevant material information before it, including the information disclosed in your reply or interview to determine what, if

any, enforcement action is required to ensure current and future rule compliance.
The knowing and willful making of any false statement in reply to this notice is punishable by fine or imprisonment under Title 18, United States Code, Section 1001.
Sincerely,
Binh Nguyen
Resident Agent, Portland (Oregon)
CC:
 John Anderson, President
Eugene Trucking Haven, Inc.
800 Willamette Street, Suite 800
Eugene, Oregon 97401
Editor's note: The FCC advises that some of the five models of CB transceivers listed above were capable of operating on 10 meters.

His excuse is very lame Brainbuster,
All you have to do is change one or two of your
letters in your addy. The spam bots can not distinguish
that change, therefore cannot use that addy.

From: joxendi@bellsouth.net (Jerry Oxendine)
By virtue of USAF policy, I am not permitted to personally divulge any
USAF frequency in spite of
the fact that any civilian can obtain these in most of the so-called
"Secret Frequency" books. I WILL tell you this; The worst "freeband"
frequencies, the ones that give us grief are 26.615 and
26.625.

"Now we are actually getting somewhere. A blanket approach gets neither
side anywhere."

Our frequencies are above, below, and around that general area, and the
splatter is horrendous. Also, as to harmonics from military equipment,
you must know that the NTIA standards are MUCH tighter than those of FCC
and all military equipment,

"My point exactly, but certain individuals can't comprehend that many
folks have radios that are clean clean clean! Don't be so surprised that
it's not only hammies that can achieve the blissful, super clean status
of a military station, especially when some are running nothing but
commercial quality or military stations themselves."

Response:
Still, a clean, clean, signal if transmitting on an unauthorized
frequency or right
adjacent can interfere as much. There's no getting around the fact the
"freeband"
station should not be there to start with.

"In theory, I agree. BUT, the fact remains that many DO have those super
clean stations."

including my own
IC706s must meet those standards or the station is NOT allowed to
operate there. Same way on
VHF. Certain amateur equipment mfrs do make high stability oscillators
as options for their
equipment, and there are certain mil spec mfrs such as Harris, Grove,
and Tait (VHF). I will be
obtaining a Tait in December because my VHF gear will "sunset" at that
time. Are we on those
frequencies 24/7? No. The 26 MHZ frequencies are like tools in your
toolbox. You might not
need your socket set for weeks. But when you DO, you expect it to be
there ready for use. So
you open your toolbox and discover that somebody has "borrowed" your
5/8" socket--the very one you need. The ONLY one that will fit. Now you
are PISSED big time because your tool is
missing.

"But it's NOT missing. It can NOT be compared to theft, it is NOT a
tangible object. If theft of a frequency was the issue, would not a
"theft" or
at least a trespass charge be employed?"

Response:
It may as well be "missing"--it has been usurped by an unauthorized
station. The injunctions (NOVs, NALs) issued by FCC are, in fact, a form
of "trespass" charge which the offender is required to answer-- just as
he would answer to a judge if charged with simple or criminal trespass
onto someone's physical property.

"Well, ok, let's run with that. If it were of that nature, enforcement
would be a priority. It clearly isn't. Enforcement of the amateurs has
just begun scratching the tip of the iceberg. Long way to go 'fore they
move on."

  Same way with 26 MHZ for CAP. We find a communications need and
look in our
toolbox (the MUF) to find the "socket" (frequency) that will do the job.
VERDAMMT! WAS IST LOS? Someone has borrowed our tool (frequency) and it
is not available because that person
has stolen it, borrowed it, or whatever. Now WE are pissed because we
can't even use our own
tools.

"I understand your point, Jer, really, I do, but I asked you to forget
those freqs for the sake of the issue. You are arguing a point which is
preaching to the choir. I agree with you that certain freqs are to be
avoided, that was never an issue. Let's cut to the chase. Are you also
stating that there are no abandoned freqs in that bit of band?"

Response:
I do not know and cannot honestly say.
What I do know is that those frequencies show assignments, according to

current frequency lists.

"Agreed. But, the fact remains is that is what I contended all along, nothing more, nothing less."

The analogy is still good that those frequencies belong to someone, whether they use them regularly or not.

"Um, for the most part, I tend to agree. Some may be assigned, but not in use, and not always for interference purposes, either. Broadcast companies have, in the past, sucked up spectrum only to avoid competition IE: someone else using it."

Therefore, neither I nor any- one else has the right to use them. Now we must transfer that traffic to VHF or to another HF frequency that gets out long haul
where we "might" interfere with yet another search mission in another state.

"By the very assignment of this vhf location, an inherent flaw is present, redirecting the problem back to it's origin, the offending party responsible or spectrum allocation and assignment."

So, by not being able to use the ideal frequency in the instant case, the harm comes in several possible ways: 1) On VHF where the traffic load (tactical) is the heaviest by far we add yet more traffic that could've been handled on the low power 26 circuit had it been free of jabber, squeaks, squawks, and racket. 2) We now raise the possibility of having onlookers at a crash site that might interfere with the wreck-age by moving or taking evidence, or simply by being in the way until we can get law enforcement
there to make 'em leave. 3). In spite of coded traffic, victims' relatives
may be able to figure out
adverse news prior to procedures designed to deal with the family can be implemented.

"Well, I think this is a bit of a stretch, but I'll go with it. Worst case scenario of what COULD happen: Relative killed in some type accident, kin hear it before being notified. No safety concerns here, or harm done, and again, no victim. No victim = no crime. I won't even bother with who makes the "procedures" and standard prorocol when dealing with families. The govt has their own way, as does the airlines, as does Amtrak, etc. This is a rule of inconvenience/convenience at best, based on nothing to do with safety or welfare concerns."

Response:
I cannot agree with the above regarding the feelings of families who are anxiously awaiting news of their long overdue loved ones. All the agencies you mention, indeed, do have procedures for notifying family--all of them designed to do so with the least amount of distress. We OWE the family this consideration.
"I am not one to believe the government has ever been concerned with

welfare of it's citizens as a number one priority. Perhaps if I were to believe that the government was genuinely concerned with the feelings of it's citizens instead of it's own PR, I would be so inclined to think as you."

Again, if there is someone nearby operating on our frequency (s) with a big "leen-yer", it disrupts our operations as it would any agency who was attempting to accomplish a job or mission.

"Usually. I would have agreed with this all the way a few years ago, but since arriving here, a few have enlightened me on distinguishment between what constitutes filthy bleeding pig amps compared to a properly designed and tuned (amp class notwithstanding) cicuitry that produces super clean signals. There are clean amps and dirty amps, with a gazillion other factors that may or may not come in to play. Of course I am always open to anything that may suggest otherwise. Amplifier class and discussion of their differences is quite amusing when it actually occurs, disregarding allegations of illegalities of course, because we all know it is totally legal to discuss.".

(IF there is a person alive and injured, say, in a crashed airplane on a mountainside, his best chances of survival are if he is found within the first day. Any delays
that ensue, any disruptions in radio communications lessen the likelihood of his being located in time.

"Let me understand what you are saying here beyond a shadow of a doubt......are you claiming a chain reaction, set off by the offending freebander, caused you to go to another portion of your service, in this instance, a VHF freq. that was assigned to your services'
specific needs, is not reliable, and that is somehow the freebanders fault?"

4) Putting
the traffic on long range strategic frequencies where it will be broadcast all over the world when such is neither needed or wanted, and perhaps causing interference to OTHER emergency opera- tions that may require the use of said strategic frequencies. Not that it always will, but the direct
operations of illegal stations, OR the forced re-direction of traffic by an agency because of such
operations CAN cause the agency to interfere with itself while their forces in another area
attempt to exercise their band plans to deal with some other local scenario.

"Yep, and anyone CAN have a heart attack at any time. Do we all pop nitro for it? Anyone CAN get struck by lightning. Do we avoid going out when it rains? We MAY get killed in an auto accident. Do we avoid cars? The probability factor MUST come into play in this flawed equation."

Response:
And those CANS and PROBABILITIES are why we take precautions.

"Agreed. My contention is that the precautions we are both referring to are outdated and extreme. Why? A reasonable probability factor, based on past incidences, or I should say, lack of."

As to radio and the things that "could" happen, laws are passed based on experience to reduce such. Some things, like propagation, sunspots, and terrain, we cannot change. But we CAN pass laws to prevent man-made interference, and to punish those who would operate in a manner that, as you say, "COULD" cause interference and disruptions to other radio services.

"No. I maintain this an entirely dangerous mindset reminiscent of a police state. We don't punish those who COULD do harm. We don't persecute a man for a crime and then for those that he COULD perpetuate, thank God."

Those laws are not THAT restrictive, and only attempt to see that all agencies,
companies, and individuals are able to use their assigned frequencies without
hindrance or having to compete with non-licensees.:

"The degree of restrictiveness not even an issue at hand. The mere contention that we need act on someone on the simple notion that they have the potential to do harm or may do harm is nothing short of frightening."

Finally, to address your questions about harm done on certain "freeband" frequencies, I somewhat
agree that in some cases there may not be any---especially if those frequencies are themselves quite
close to the band edges of CB.

"Here again we are very near in our views. That is partially what I have been saying all along. Of course there are frequencies assigned that can aggravate. Knowing whether they are utilized or not factors greatly in "damage" done. There are freqs way down in the 26 band that pose no risk either, but here is where I believe we differ in some views."

But what is happening that has caught the attention of ITU, and may eventually create an international ":incident", is the straying farther and farther and still farther of the so-called "freebanders".

"And you may be right. What can you tell me about it other than what we already discussed? If you don't want to go into detail about it here, email me or send me a link to learn more about it. I'm interested in the origin of such events and who judges the magnitude of the few interference complaints that happen to get attention."

They are boldly promoting export radios with the capability of operating from 24-32 MHZ--or at lease those who would peddle such wares to

them---and people are simply using them.

"Yea, I have seen this. Seems more like a trend aimed at a specific target audience. And those transgressors should be dealt with if they cause problems. Not IN CASE they cause problems. Speeding has always been freely analogized to this act, not that it's anymore accurate than the rest, but let's go with it for a second. It is up to the cop whether to pull you over or not. Then the discretion to give you a ticket or not is also evaluated. Let the crime fit the punishment...no victim, again, equals no crime."

Response:
Waaaaal, I'm not going to get into the strident "anti-keyclown" rant.

"And that is why you come across so more elegant in your posts than some of those that profess to share your views but have never learned how to express themselves appropriately."

I don't, however, agree with the above. Laws ARE passed to prevent a problem, i.e., in CASE.

"Well, at least I see where our difference of opinion is."

If you ask a legal expert as to the law's interpretation, the fact that one is speeding is still a crime simply because the law SAYS it is. Now if a cop fails to stop you for it, he is an accessory
to your lawbreaking.

"Again, this is pushing the envelope beyond reasonable probability or belief. I seriously doubt an officer failing to stop a speeder would result in a criminal charge. Dereliction of duty at best.....MAYBE."

The law simply states, in essence, "Thou shalt", or "Thou Shalt Not" drive over 45 mph, for example. Whether you get caught for it or not
is immaterial; it is still a matter of willingly speeding.

"Agreed. And I will maintain that a cop will pull you over quicker for doing 67 in a 65 zone in a congested area a helluva lot faster than he will for you doing 67 in a 65 zone in the desert flats."

In the matter of "freebanding", the laws (OK, rules which have the backing of law)
state certain "Thou Shalts" and "Thou Shalt Nots". One of those "Shalt Nots" is to
operate a transmitter on a frequency for which thou art not licensed.

"Ok. To better illustrate, freebanding is not bound by law. Some would argue the sole act of freebanding can be compared to a form of anarchy. I don't consider the junior high kid on his FM neighborhood broadcast station to be an intentional anarchist. I don't believe the government deems the offending DXers near as dangerous as is made out among these pages."

It does not matter
if the frequency is used daily, infrequently, never, or is vacant. If
you get caught at
ANY "victimless" crime,

"There arent many "victimless crimes", and laws that exist that do
support such should be abolished, in this case, ignored or disregarded."
will it do any good to argue before the court that it was OK because
nobody got hurt?

"Yes, I believe it will. To use an analogy you referred to earlier, a
perp busted for a B & E that has burglarized an occupied dwelling will
receive a more severe punishment than he would as for burglarizing an
empty dwelling. It may even be the difference between a burglary or a
robbery charge, or both. This echoes my sentiments that the severity of
the "crime" of freebanding is reflected and evidenced directly by the
number of infractions vs. prosecutions."

I doubt it because the judge is going to check to see what law was
broken and if that law says "Thou Shalt Not", he is going to apply the
law and the
punishment that applies.

"Judges have more discretion than you give them credit for except in the
case of mandatory minimums, and they are wrong, too. It deviates from
the entire concept of justice and a jury of one's peers."

Again, back to the "TRESPASS" concept: If you see a sign that says
"No Trespassing", and you cut thru the pasture and get caught by the
owner, you will
face the music if he decides to press charges. Did you "hurt" anything
by cutting thru his land?
"Well, to be fair, you said there was a path worn..that may be construed
as damage."

No. You were informed not to come onto his land. You got punished simply
for BEING there.
"See above."

That's the way the law is regarding the so-called "freeband". YOU will
get
punished, if caught,
if the "cop" (FCC) catches you simply because you "trespassed",
encroached upon, used, vio-
lated frequencies that aren't "yours" to use. sounds like channel
19 now, and quite
frankly, if I had the permission and the means, I'd like to key down
with a gazillion watt AM
transmitter and blank out every illegal idiot on there! Again, they are
cutting across "my" pasture
and trespassing on "my" turf. But I cannot do that. If the freebanders
will usurp forestry frequencies, then go onto 10 meters,

"So you throw the baby out with the bathwater? Indviduals MAY go on ten meter because they hear me on an abandoned petroleum freq? I seriously doubt that scenario. Even if that were to happen, as isolated as it would be, it is up to the operator to know where he is transmitting at all times.
  Hell, Jer, using that analogy, you better clean that 2 meter band up real quick. If a newbie licensed hammie hears something like the Liberty net, they MAY go wild on ALL the other hammie freqs 'cause they think it's ok. Utter Balderdash."

Response:
WILL go onto 10 meters? They are already there. I can sit during any day and listen to 28.085 (the most popular one) and hear the truckers all over the
country! I doubt it has anything to do with hearing a particular individual on his
favorite "freeband" frequency. This issue has more to do with the greedy truck stop
shops selling "export" radios with "them thar 'extree' channels thar". The
truckers
don't really know where they are--they've been told "channel 19 2-up". And
I know
this: They are getting caught by hams who are sick and damned tired of it.
Am I one
of the ones trying to catch 'm? YOU DAMN RIGHT! I don't really care what fellas do
dnwn on CB so long as their operations don't mess me up.

"There it is. We are back in agreement again. Bust 'em, report 'em, take numbers and kick ass and take names if they are buggin' ya!" If they're not, it's nun yo' biz, you ain't the law and anyone that acts like they are can not expect anything but a hostile response in return, maybe ignored at best."

  But when I attempt to call
CQ on 28.085 and hear SQUEAK! BEEP!, etc, then they are trespassing in MY pas-
ture. I've got my tape recorder, camera and notepad in the car, and if I hear one on I-85
while I am out there he is NAILED.

"Well, you at least have some accurate information to send along in your report. It doesn't automatically constitute his guilt, as an official law agency or it's authorized agents must witness illegal transmissions."

Now that shoe fits both feet. If you hear clowns, yes idiot HAMS, on 2 meters, then why
don't you turn them in, or complain to the control operator? I would.
Mr. Hollingsworth is

doing a great job of cleaning this up, but he can't deal with if if he doesn't know it. Around here
that kind of behavior will not be tolerated--the control ops will drop the repeater right out from
under them. If you are talking about dumb, inane conversations, well, you can't regulate stupid!
The 3950 guys will take care of themselves:

"And so will the DX interference."

if Riley hasn't gotten around to them, he will. onto 12 meters, then down to 17, where does it stop? The asnwer is, it won't!

"This too, is BS, Jerry. Don't tell me how it doesn't stop, because I have been talking on the same freqs since the late seventies and I have no inclination to foray into your MARS freqs, VHF, or any other hammie freq. and most freebanders are polite, mindful, and considerate, even to the point that I can listen to them all night and day and not hear nearly half the problems I hear on the staright 40 or hammie bands. It stops where it always has with most organized DX club freebanders. You are beginnig to sound paranoid that freebanders want your hammie freqs...trust me on this Jer, we want nothing of the sort. If we did, our ticket would be on display, we wouild think it made us "smarter" and we would be talking with other hammies on permitted freqs, but we don't, and we intentionally avoid the hammie bands like the plague. "

Response:
With all due respect, TW, how can you speak for all "freebanders"?

"Seriously, Jer. I don't profess to speak for all of them. I feel comfortable speaking for the ones I am seemingly familiar with. Listening to fellow DX club members and their behavior on the air, some for many years, has given me at least a glimpse into their operating techniques. We do have many, perhaps a great number more than some would wish to admit, of hammies that are club members. I can't even remember the last time I had, or even heard an altercation while DXing there, other than the usual on 555. That's one out of many freqs."

In the ham bands, we have "renegades" just like in CB--just read RainReport to see that.

"Yea?, Well in the freeband and cb we also have hammie renegades."

It is those renegade operators, hams and freebanders alike, that are bring adverse attention (ITU) on their hobbies. hy ITU is addressing this issue--to draw a line in the sand and turn back the stampede of unlicensed intruders that is coming IF such is ignored. It is not only the US that is affected by this; complaints are coming from all over the world. "tis just the way it is.
Jerry

"Is there a specific URL for the ITU?"
-

"And we will roll with the changes, as we always have. I take no issue with your reasoning concerning hammie band intrusions, but not all freqs are used, and not all freebanders use dirty equipment. After 20 plus years of continual DX, the only problem I ever encountered concerning those activities are the cry babies right here in this forum. Nothing else, ever. And don't tell me it's luck, 'lest the entire American contingency of the Alpha Tangos, Sugar Deltas, Charlie Michaels, etc., etc.,have been riding one bitch of a wave of tremendous continual luck for over 30 years. I also understand your frustration that causes hammies to take aim at intruding freebanders.....no matter how incorrect that aim may be. You are absolutely correct defending "your" turf, if you truly believe that. My objection isn't with that point. Matter of fact, I have no objection at all, it's the direct opposite. It appears the same few are taking objection with my maintainment that I bother nor hurt no one while ragchewing on my fave DX freqs. The objections are all redundant and contaminated with personal prejudices and "what if's?"

TW, I truly say this without personal angst.

"I know you do, Jerry."

I don't know about "incorrect aim".

"Sure it is. I don't jam you, harass you, bleed you, or any of the sort, but since I am a freebander, I take my lumps from those that are wronged by those that do hurt the image. Its part of the package and I accept it. Difference is, I don't throw all the hammies in one class based on the few mindless no codes we have present here."

I will defend my turf. No need belaboring the point. I only respectfully point out the following, and I don't mean it to be smart aleck or ugly in any way.
When it is all said and done, no matter the personalities, the anger, the arguments,
and insults, the law is against "freebanders". I know you won't argue with
that, and
if you got caught, you would face the music. The law IS on the side of those griping
hams, yeah, those grouchy old men whom so many CBers disdain.

"Or those grouchy old men who hold cbers in disdain. My first introduction EVER to the ridiculous concept of "us vs. them" mentality between cbers and hammies was right here. It is the few hammie no codes here hell bent on keeping it that way."

If you had to go to court with the same arguments you put forth here, do you believe you would win
your case?

"Depends what I was in court for. You don''t go to court for merely freebanding."

Finally, let me say this in defense of Amateur Radio.

"I was not aware I was viewed as being on the offensive concerning amateur radio, and you certainly have nothing to defend, Jerry. Your view is just as important as the next guy's, in many cases, more important...you don't get ignored or killfiled...yet..keep talking rationally and the anti's will be on your azz. Your ability to express an opposite opinion without reducing yourself to the level of an insecure child speaks directly to the anti 3."

It is NOT made up primarily of
"grouchy old men" with nothing better to do than whine about their aches and pains.
Unfortunately, the
IF
I wanted to find those old farts, I certainly can. I can dial thru the CB channels and find
them there, too. There is NO difference in CB operators and ham operators. We live,
we eat, sleep, work, and put our britches on the same way. People tend to form "cliques"
or circles of friends in all kinds of endeavors: work, play, church--anything. For example,
if you come thru here on I-85, you just might hear a bunch of us local hams on 28.610 scattered
out in a 35 mile radius. This just happens to be where we gather, especially when the skip is NOT
in, mostly at night. We talk about radios, (of course), current events, tell jokes, talk about what's
been going on that day, tease each other (mildly), and engage in health doses of laughter. I can't
find any evidence of old farts on that frequency! I really wish YOU would take advantage of what ham radio has to offer.

"I appreciate that, Jerry, I really do. There exist some aspects of ham radio that holds my curiosity. There is some really neat experimental stuff taking place, especially way down low."

Like CB, it will become what YOU make it. I have run into curmudgeons on ham radio, I told them to kiss my grits and moved somewhere else. There are fine, fun, and
motivated people in the hobby. You just have to find them.

"No doubt. I agree. I feel the same among some freeband freqs.. Some of the freqs. are full of great folks, night after night, the only difference separating us, is that teeny, little matter of legality."

Best 73, and I am enjoying our debate!

"It is refreshing. Now if I can get some of these guys to continue discussing amp classification and continue the arguments supporting each point of view, I can get back to printing, er, writing down and comparing what amps are clean and which are filthy, all for personal

knowledge of course.."

There's no antenna made with legal power going into it that can compete
with the 'big' amp's that some people use.

Hi Bert,

I was wondering how you were getting along with the 27.125 CW. I will read
that thread with interest.

Regards,

Phil C

twistedhed@webtv.net (Twistedhed) wrote in message
news:<24470-3BCEDD72-172@storefull-123.iap.bryant.webtv.net>... Yep, the
weather wasn't up to snuff and I had the day off. Result: enough boredom
to actually do this:
Between 26.000 and 28.000MHz, there are no less than 1585 ACTIVE site
licenses in the US for no less than 1100 individuals, large
corporations, small businesses, educational institutions, government
agencies, and emergency organizations. And that number -doesn't- include
experimental or general coverage sites. This information is from the
FCC's wireless communication database. There were about a dozen or so
sites within 26.96 - 27.41MHz, but were not included in the count. These
site licenses are good for only 10 years. Each year, new ones are
granted and old ones are renewed, just like any other band. Without any
doubt, the freebander's argument that these freqs are "abandoned" or
"unused" is 100% bullshit. That was a great idea, twist! Thanks!

"Wellllll, it WOULD have been if you would have done what you originally
claimed you were going to do. You were to contact these entities, not
look at a chart. What hapened to that idea? As I said, start with the US
forest service and move on to the petroleum companies. from there you
can progress to the larger companies. Without any doubt, your argument
is 100% garden fertilizer. Since you do not want to what you actually
claimed you would do, I am done educating you. Some things you must do
yourself. If you aren't going to do what you say, you are welcome to
believe anything you wish. Thing is, whether you learn or not doesn't
matter much to me. You claimed one thing and here you are claiming
victory before you did the acid test. Just 'cause you say it, doesn't
make it so. In any event, you are still incorrect for the most part."

Well, I didn't see too many petroleum companies in the list, and not too
many forest service freqs, either. Actually, I didn't see any.

"Well, how about that? Someone got around to updating the list you are
using. Are ALL the frequencies accounted for that fall between 26 and
27? Better look again. No? Ok, now I will tell you why there are gaps in

your chart. Some freqs aren't listed because they are abandoned, no longer used, forgotten, given the 'ol heave-ho for sounder and more reliable modes."

Hmmm, them maybe you can explain why everyone has abandoned all the even-numbered freqs .... oh, that's right, the FCC assigns them that way! Since many of the popular freeband freqs land right on top of the odd-numbered freqs, you need to find a better excuse.

"Excuse as to what? Are you again erroneously accusing me of freebanding on specific freqs as you have in the past of me using power, as did the other 2 of your muff crew? You know not where I talk, not what I run, nor whether or not I have ever even broken part 95, let alone any other rules, other than what I allow you. No, you haven't the slightest idea of my ventures. Your biggest failure to date, and one that is not comprehended by you in all your time present here, and a subject you avoid like the plague, is equating one's views, positions, and opinions with breaking the law. You have a character flaw, some type of psychological "tick" that prevents you from separating speech and views from actual action."

Even a couple CB shops. Where did you get
your information, twist?

"What information? The forest service? From the forest service. A great way to DX nirvana is a company that went bankrupt or out of business for whatever reason, assigned to, oh, say, 26.390. Still another is the company upgrading their comms. equip. that left behind, yet another abandoned freq. The petroleum industry is even more scattered and not able to tell who owns what. Government petroleum services? Private? Leased freqs? Contracted permits? Temporary use permits,,etc. This goes way further than looking at a chart and saying, "Well, there it is, the chart says so, so it's the gospel." Tell ya' what. I'll even assist you in your endeavor, as I haven't looked into exact leasers/owners of freqs for a few years now. Send me whatever chart or info you can, I'll take 25 and 26, you take 28 and 29, (or vice-versa, doesn't matter) and we'll try and line up who is authorized to talk where. THEN (since it's only half of your, among a few others', arguments) we will contact a spokesperson, if applicable, for each assigned company and inquire about interference for those that actually USE their assigned freqs. No need to mention cb or ham or anything. tell 'em you have been interested in 2 way and employed in radio most of your life and you need the information for an informal study you are doing. Mentioning cb or anything alluding to it is leading the witness and predisposes answers. Besides, if RF interference from barefoot freebanders is as bad as you and a few others maintain, there is no need to mention your allegations, they will flow freely from the companies, no? Let's hit it. Do it right and fair, I'll even give you credit and a copy of the article I'll write about it, regardless of the outcome, unless you're worried about stealing anothers aspiring thunder."

The FCC has all the info I have, you can get it the same way I did. Then you can do with it what you want, and you don't even have to share any credit!

"The FCC is lacking in many of their endeavors, enforcement areas included, one thing we mostly all agree on. It is for this, among other reasons, that I do not consider the FCC the best source to relate current and pertinent happenings among the areas they are supposed to have jurisdiction over."

"You know what, dude? I don't either, but we can make a start. Divvy it up anyway you want, we can do this, maybe not overnight, but I participated in something very similar once before. Remind me Monday and I'll try to find the data I had compiled on the spectrum and I'll post it and we will compare.'

Rest assured, twist, many of them will be notified, and there will be some response.
But the response may be to the FCC, so I won't be able to post it here.

"Well, I'll post what I find. Why would companies begin responding to the FCC out of the blue because of an inquiry from you concerning their bands? If you are that paranoid about contacting them, tell them you are programming a scanner, for crying out loud. And after everything you have posted in the past, why on God's green Earth would you fret over posting a response concerning a frequency that is available for listening to the general public?"

Just keep on giving me more great ideas like this one, would ya?

"Certainly. You want to earn some money? Hate to stop you when you're doing so well and in such a great mood. I don't hold a grudge..I may be able to show you how to make some cash off your radio knowledge, and whatever else you may retain. There is a market for it all....but you would have to write in my "infantile" style and get past the notion that your personal feelings matter at all to your target audience. Should one be fortunate enough to establish a regular reading audience, only then may your personal opinions be of interest. "Course unsolicited manuscripts and contributions must contain the author's name, address and phone for confirmation of accuracy, credit, and payment. Certain instances may require notarized form attesting to originality and authorization of first time electronic publication rights or one reprint when specified."

I don't feel the need to post any of the responses. The purpose of contacting these entities has nothing to do with the newsgroup, except to the point of saying what I am doing.

"Sure it does. Once again, just because you take issue with speech content and wish to censor such talk concerning freeband freqs does not make it any less relevant."

If you want to do your own little campaign, go for it. Post what you want, the more the merrier. Personally, I really doubt that you have the ability to convince any company to ignore their 'lease' for the sake of illegal radio operators, but I encourage you to try.

"Whoa, Sparky. Where did that come from? Your inferences are getting almost as poor as my latest canine acquirement in Pa. that can't decide on what he wants to be called. You repeatedly demonstrate inability of comprehensive deducibility concerning that of what you read. You really ought to have that MRI if you took anything I wrote as even remotely resembling trying to convince any company of anything..seriously, old chap, it appears you are flaking a bit again."

I'll even post the list when it gets finished so you don't have to sift through the database freq by freq.

Whaddya say, twist? Are you up to the challenge?

"I indeed claimed I would enjoy the original "challenge" you set forth and readily backed away from when it suddenly dawned on you how wrong you are concerning abandoned freqs. Your refusal to publish or show culled results serves only to nullify your claims, not unlike the nonexistent examples lauded by you and yours concerning the imaginary interference to emergency, airline, military, etc., ops by barefoot freebanding."

Hi Peter, (Hope you don't mind?)

That's pretty cool. I'm not sure how Britain got around the ITU treaty agreement, but it's definitely cool. Thanks for the clarification.

From: philc@nospam.com (PhilC)
"Sparky" <fgillil@tincan.org> wrote:
Entertainment, Phil, nothing more. Why don't you try something more original next time? Twistie used up the "you respond so I must be important" game a long time ago.

"How humorously ironic..yet here you are clamoring for me."

Thanks for proving my point. LOL!
Phil C

Just what -is- your point, Phil? The only 'point' you have made is that you enjoy trolling. It just so happens that the more you troll, the more you discredit yourself, just like twistie.

"And again..."

You two aren't related, are you? Oh well, just keep up the good work!

Wow, I feel so important! Sparky thinks I am so important that he cannot stop responding to me! :-)
Seems to me you enjoy a certain amount of trolling yourself.
Phil C

"Hehehe..you'll get used to the status, Phil. Just wait until you stay away from the group for awhile and your name is recited as a mantra...then, you will have arrived."

2403. Fair: Rheintal-Electronica 2001, 10th November

Hello Radio enthusiasts,

welcome to 10th Rheintal Electronica 2001
Date : Saturday: 10th, November 2001
What : Radio-, Electronics- and Computer-Fair
Where : D-76448 Durmersheim (Germany, Europe)
south of Karlsruhe
Autobahn A5 Frankfurt - Heidelberg - Basel,
Exit Karlsruhe Sued (Rheinhafen)

opening: 9.00 hr (a.m., CET)
closing: 17.00 hr (5.00 p.m., CET)

Where exactly: "Hardt-Halle" at 76448 Durmersheim

Parking: Free of charge Transfer from Parking-Lot
to the fairground

Public Transport: Regional-Train S-Bahn S4
from Karlsruhe to Rastatt, leave at
"Durmersheim-Nord"

Directions:
Amateur-Radio : 145.500 MHz (call DF0RHT)
CB-Radio : 27.135 MHz (CB-Channel 15 FM, AM possible on
request)

What to find: Amateur- and CB-Radio equipment, Transceivers,
Antennas, Computer, Peripherial, Software, Hardware,
Components, Literature, Additional Accessoires

Local Usergroups and Organisations for CB- and Amateur
Radio give Informations about Radio, Computer and
applications.

Contributions, Discussions (in german language)
to the following topics (See below)

Information Program (in German Language)
---

ca. 9.00 hrs Opening

Topics:

- GSM, UMTS & Co.
- Basics for home-brew radios

- Coaxial Connectors: Tipps and Tricks
- Radio for everybody: PMR446, LPD, Freenet, classical CB-Radio (27 MHz) - unwanted radiation of Cablenetworks for Radio, TV, Internet, Telephone - Internet-Radio
- Antenna Problems, Reports, new Antennas, Modifications and more - Q & A for operations between 144 MHz and 5GHz

16.00 Uhr Opinion-debate "Sagen Sie uns Ihre Meinung" with lottery

the reason that this is posted in this newsgroup is that i get more "ham operators" inquiring about the equipment on this newsgroup than if i post it in the ham groups. anyone that has any questions in regards to this equipment feel free to e mai it to me...

> OK toll you have run A/C. What alternator and how many do you run for the
plate
> supply on a single 3CX3000A7

I would start out with a minimum 300A Leece Neville. Or run dual power
supplies and
dual 300s.

This is an argument that goes way back, before you where around (as this
nick).

Their is 3 ways to do things.. The right way, the wrong way, and the CB
way.

You can pull 5Kw out of a 250 amp leece neville, but your not going to hold
5Kw
longwinded, and have your alternator have the lifespan it was designed for.
Thats the
bottom line.

>with the fils. running on a 165 amp leece?

I wouldn't run the fils on a alternator. That results in whine on the
output signal. That's
elementary electronics my friend. Especially since the output of the
alternator will vary due to
regulator differences, RF feedback to regulators, and it isn't a continuous
DC output without having
some type of external caps or batteries.

I prefer to run them off an inverter, connected to a pure 12 volt supply,
and then also
have the capabilities to pull the HV connector off, slide my box out, and
put it in the house
as well.

That also isolates the input / output to keep the probability of
oscillations down.

Of course, I run 4CX tubes with screen supplies, and not simplistic grounded
grid amplifiers
that have to be driven to hell and back.

Someday the rest of the amp people will see what Bluegill learned YEARS
ago..

So, if your running equal antennas as I am, and I run twice the output power that you do, you still have a chance of being heard when I am keyed up?

Typical argumentative "I am holier than you, and my antenna system will whip your linear's butt".

Notice how he only quoted PART of my text, since if the rest was taken into account, it would make his comment fecal matter.

No, that would be on the base station.

On the mobile, it isn't uncommon to find people running 3, 4, 5 even 6
element mobile antennas at a keydown.

>
> > Power IS the deciding factor.
>
> I don't think so, toll.

So, with equal antennas, you believe the guy with a lower power output from
his transmitter or amplifier will have a greater
chance of being heard than someone with twice the output power?

Please explain that.

You, like many of the other misguided souls in
> this newsgroup, have misconstrued the meaning of the word "communication".

We are not talking about comms, we are talking about a shootout competition.

Listen during CQWW and you will find the same things on the amateur bands.

Besides, you can throw anything into an argument, and if it is off topic,
you will
find that you can argue any point.

> It's not about 'power'; it's about control, cooperation, and courtesy.
> With nothing more than a stock CB, I can communicate with anyone anywhere
> on the planet.

And with my 2Kw amplifier, I can do so more often, with more reliability.

If that WASN'T the case, you wouldn't find the proliferation of amplifier manufacturers
in the commercial and amateur arena, would you? I mean, after all, everyone wants to spend
money on unecessary items? Don't you?

I can also win a keydown against the biggest amp you can
> find. It's easy. All you have to do is know how to communicate.

lol.

Your going to win against a mobile to mobile competition using a barefoot radio against someone
with a 80Kw output? All else being equal?

extranneous BS snipped in the interest of brevity.

75 meters. Enough said.

2 meters, just in case you didn't get it the first time.

Hollingsworth went after the ARS before CB radio service. You wonder why?

ARS is just as dirty, just as political, and has just as many bad apples as
the CB radio
does in proportion. When the US ARS service has as many people in it as the
CB service does,
then you can compare the two. Otherwise, your comparing apples to oranges.

In addition to caring about our
> own enjoyment of radio, we hams also care about other people's
> enjoyment of radio. They don't.

lol.

Hence the problem with ARS operators coming to the 11 meter band.

Hence the problem with ARS operators getting busted for signal jamming

Hence the problem with ARS operators building illegal output amps.

Hence the problem with ARS operators and them building illegal 11 meter
amps.

Blah Blah Blah.

TW,

I most heartily enjoyed your answers and rebuttals to my points. This should be a lesson to others
who would debate an issue on how to do so without becoming childish and flaming each other.

I won't intersperse comments because the posts get quite long when you do that.

Yes, indeed, there is MUCH to be offered in ham radio. One of the areas of experimentation is
in the LOWFER area (100-200 KHZ). And the experimentation in satellite comms is ongoing.
I am hoping to make another contact with the Space Station on 2 meters. They were on last
Saturday for the Scouts Jamboree on the Air (JOTA) where scouts were given priority and
a chance to speak to the station directly. I missed that because of company. (DRAT!) Person-
ally, I am grateful for what Amateur Radio has taught me. It doesn't make me smarter, but it
has allowed me to receive an education in many facets of electronics--like the screwdriver
multi-band antennas I build. I like the fact that I can make phone calls from the car for free
by dialing up the auto-patch. I enjoy DXing--likeSaturday while waiting for my daughter at
WalMart when I made a contact on 10 FM direct with Leipzig, Germany. Or the time I
had multiple QSOs with a USAF tanker on 40 meters as he traveled from S. America up
thru Panama, Texas, and Charleston AFB, SC. I picked up with him the next day as he
went up the E. coast to Dover AFB, Delaware. The flight engineer was a ham and was using
the onboard HF equipment to pass the time away. (Yes, it is legal because it meets standards
even more rigid than FCC's.

Oh, BTW, I ordered a Harris RF-230 military transceiver for our CAP squadron out of Texas
last week. Should be here by first of next week. Covers 1.6 thru 30 MHZ at 125 watts out.
Has a matching power supply. Reeally neat mil. spec. rig!

Anyhow, I think you SHOULD take advantage of Amateur Radio and take part in the things
that excite you (except freebanding! LOL!). Those old buzzard hams can be avoided. Think
of the spectrum you'll have available!

We may never agree on the issue of intrusion onto unauthorized frequencies ("freebanding"),
but we can do so in a friendly way--heck, I'm enjoying it.

73

Group: rec.radio.cb
Date: Wed, Oct 17, 2001, 6:11pm
From: joxendi@bellsouth.net (Jerry Oxendine)
By virtue of USAF policy, I am not permitted to personally divulge any
USAF frequency in spite of
the fact that any civilian can obtain these in most of the so-called
"Secret Frequency" books. I WILL tell you this; The worst "freeband"
frequencies, the ones that give us grief are 26.615 and
26.625.

"Now we are actually getting somewhere. A blanket approach gets neither
side anywhere."

Our frequencies are above, below, and around that general area, and the
splatter is horrendous. Also, as to harmonics from military equipment,
you must know that the NTIA standards are MUCH tighter than those of FCC
and all military equipment,

"My point exactly, but certain individuals can't comprehend that many
folks have radios that are clean clean clean! Don't be so surprised that
it's not only hammies that can achieve the blissful, super clean status
of a military station, especially when some are running nothing but
commercial quality or military stations themselves."

Response:
Still, a clean, clean, signal if transmitting on an unauthorized
frequency or right
adjacent can interfere as much. There's no getting around the fact the
"freeband"
station should not be there to start with.

"In theory, I agree. BUT, the fact remains that many DO have those super
clean stations."

including my own
IC706s must meet those standards or the station is NOT allowed to
operate there. Same way on
VHF. Certain amateur equipment mfrs do make high stability oscillators
as options for their
equipment, and there are certain mil spec mfrs such as Harris, Grove,
and Tait (VHF). I will be
obtaining a Tait in December because my VHF gear will "sunset" at that
time. Are we on those
frequencies 24/7? No. The 26 MHZ frequencies are like tools in your
toolbox. You might not
need your socket set for weeks. But when you DO, you expect it to be
there ready for use. So
you open your toolbox and discover that somebody has "borrowed" your
5/8" socket--the very one you need. The ONLY one that will fit. Now you
are PISSED big time because your tool is
missing.

"But it's NOT missing. It can NOT be compared to theft, it is NOT a
tangible object. If theft of a frequency was the issue, would not a
"theft" or
at least a trespass charge be employed?"

Response:
It may as well be "missing"--it has been usurped by an unauthorized
station. The injunctions (NOVs, NALs) issued by FCC are, in fact, a form
of "trespass" charge which the offender is required to answer-- just as
he would answer to a judge if charged with simple or criminal trespass
onto someone's physical property.

"Well, ok, let's run with that. If it were of that nature, enforcement
would be a priority. It clearly isn't. Enforcement of the amateurs has
just begun scratching the tip of the iceberg. Long way to go 'fore they
move on."

Same way with 26 MHZ for CAP. We find a communications need and
look in our
toolbox (the MUF) to find the "socket" (frequency) that will do the job.
VERDAMMT! WAS IST LOS? Someone has borrowed our tool (frequency) and it
is not available because that person
has stolen it, borrowed it, or whatever. Now WE are pissed because we
can't even use our own
tools.

"I understand your point, Jer, really, I do, but I asked you to forget those freqs for the sake of the issue. You are arguing a point which is preaching to the choir. I agree with you that certain freqs are to be avoided, that was never an issue. Let's cut to the chase. Are you also stating that there are no abandoned freqs in that bit of band?"

Response:
I do not know and cannot honestly say.
What I do know is that those frequencies show assignments, according to current frequency lists.

"Agreed. But, the fact remains is that is what I contended all along, nothing more, nothing less."

The analogy is still good that those frequencies belong to someone, whether they use them regularly or not.

"Um, for the most part, I tend to agree. Some may be assigned, but not in use, and not always for interference purposes, either. Broadcast companies have, in the past, sucked up spectrum only to avoid competition IE: someone else using it."

Therefore, neither I nor any- one else has the right to use them. Now we must transfer that traffic to VHF or to another HF frequency that gets out long haul
where we "might" interfere with yet another search mission in another state.

"By the very assignment of this vhf location, an inherent flaw is present, redirecting the problem back to it's origin, the offending party responsible or spectrum allocation and assignment."

So, by not being able to use the ideal frequency in the instant case, the harm comes in several possible ways: 1) On VHF where the traffic load (tactical) is the heaviest by far we add yet more traffic that could've been handled on the low power 26 circuit had it been free of jabber, squeaks, squawks, and racket. 2) We now raise the possibility of having onlookers at a crash site that might interfere with the wreck-age by moving or taking evidence, or simply by being in the way until we can get law enforcement
there to make 'em leave. 3). In spite of coded traffic, victims' relatives
may be able to figure out
adverse news prior to procedures designed to deal with the family can be implemented.

"Well, I think this is a bit of a stretch, but I'll go with it. Worst case scenario of what COULD happen: Relative killed in some type accident, kin hear it before being notified. No safety concerns here, or harm done, and again, no victim. No victim = no crime. I won't even bother with who makes the "procedures" and standard prorocol when dealing with families. The govt has their own way, as does the airlines, as does Amtrak, etc. This is a rule of inconvenience/convenience at best, based on nothing to do with safety or welfare concerns."

Response:
I cannot agree with the above regarding the feelings of families who are anxiously awaiting news of their long overdue loved ones. All the agencies you mention, indeed, do have procedures for notifying family--all of them designed to do so with the least amount of distress. We OWE the family this consideration.
"I am not one to believe the government has ever been concerned with welfare of it's citizens as a number one priority. Perhaps if I were to believe that the government was genuinely concerned with the feelings of it's citizens instead of it's own PR, I would be so inclined to think as you."

Again, if there is someone nearby operating on our frequency (s) with a big "leen-yer", it disrupts our operations as it would any agency who was attempting to accomplish a job or mission.

"Usually. I would have agreed with this all the way a few years ago, but since arriving here, a few have enlightened me on distinguishment between what constitutes filthy bleeding pig amps compared to a properly designed and tuned (amp class notwithstanding) cicuitry that produces super clean signals. There are clean amps and dirty amps, with a gazillion other factors that may or may not come in to play. Of course I am always open to anything that may suggest otherwise. Amplifier class and discussion of their differences is quite amusing when it actually occurs, disregarding allegations of illegalities of course, because we all know it is totally legal to discuss.".

(IF there is a person alive and injured, say, in a crashed airplane on a mountainside, his best chances of survival are if he is found within the first day. Any delays
that ensue, any disruptions in radio communications lessen the likelihood of his being located in time.

"Let me understand what you are saying here beyond a shadow of a doubt......are you claiming a chain reaction, set off by the offending freebander, caused you to go to another portion of your service, in this instance, a VHF freq. that was assigned to your services'
specific needs, is not reliable, and that is somehow the freebanders fault?"

4) Putting
the traffic on long range strategic frequencies where it will be broadcast all over the world when such is neither needed or wanted, and perhaps causing interference to OTHER emergency opera- tions that may require the use of said strategic frequencies. Not that it always will, but the direct
operations of illegal stations, OR the forced re-direction of traffic by an agency because of such
operations CAN cause the agency to interfere with itself while their forces in another area
attempt to exercise their band plans to deal with some other local scenario.

"Yep, and anyone CAN have a heart attack at any time. Do we all pop nitro for it? Anyone CAN get struck by lightning. Do we avoid going out when it rains? We MAY get killed in an auto accident. Do we avoid cars? The probability factor MUST come into play in this flawed equation."

Response:
And those CANS and PROBABILITIES are why we take precautions.

"Agreed. My contention is that the precautions we are both referring to are outdated and extreme. Why? A reasonable probability factor, based on past incidences, or I should say, lack of."

As to radio and the things that "could" happen, laws are passed based on experience to reduce such. Some things, like propagation, sunspots, and terrain, we cannot change. But we CAN pass laws to prevent man-made interference, and to punish those who would operate in a manner that, as you say, "COULD" cause interference and disruptions to other radio services.

"No. I maintain this an entirely dangerous mindset reminiscent of a police state. We don't punish those who COULD do harm. We don't persecute a man for a crime and then for those that he COULD perpetuate, thank God."

Those laws are not THAT restrictive, and only attempt to see that all agencies,
companies, and individuals are able to use their assigned frequencies without
hindrance or having to compete with non-licensees.:

"The degree of restrictiveness not even an issue at hand. The mere contention that we need act on someone on the simple notion that they have the potential to do harm or may do harm is nothing short of frightening."

Finally, to address your questions about harm done on certain "freeband" frequencies, I somewhat
agree that in some cases there may not be any---especially if those frequencies are themselves quite
close to the band edges of CB.

"Here again we are very near in our views. That is partially what I have been saying all along. Of course there are frequencies assigned that can aggravate. Knowing whether they are utilized or not factors greatly in "damage" done. There are freqs way down in the 26 band that pose no risk either, but here is where I believe we differ in some views."

But what is happening that has caught the attention of ITU, and may eventually create an international ":incident", is the straying farther and farther and still farther of the so-called "freebanders".

"And you may be right. What can you tell me about it other than what we already discussed? If you don't want to go into detail about it here, email me or send me a link to learn more about it. I'm interested in the

origin of such events and who judges the magnitude of the few interference complaints that happen to get attention."

They are boldly promoting export radios with the capability of operating from 24-32 MHZ--or at lease those who would peddle such wares to them---and people are simply using them.

"Yea, I have seen this. Seems more like a trend aimed at a specific target audience. And those transgressors should be dealt with if they cause problems. Not IN CASE they cause problems. Speeding has always been freely analogized to this act, not that it's anymore accurate than the rest, but let's go with it for a second. It is up to the cop whether to pull you over or not. Then the discretion to give you a ticket or not is also evaluated. Let the crime fit the punishment...no victim, again, equals no crime."

Response:
Waaaaal, I'm not going to get into the strident "anti-keyclown" rant.

"And that is why you come across so more elegant in your posts than some of those that profess to share your views but have never learned how to express themselves appropriately."

I don't, however, agree with the above. Laws ARE passed to prevent a problem, i.e., in CASE.

"Well, at least I see where our difference of opinion is."

If you ask a legal expert as to the law's interpretation, the fact that one is speeding is still a crime simply because the law SAYS it is. Now if a cop fails to stop you for it, he is an accessory to your lawbreaking.

"Again, this is pushing the envelope beyond reasonable probability or belief. I seriously doubt an officer failing to stop a speeder would result in a criminal charge. Dereliction of duty at best.....MAYBE."

The law simply states, in essence, "Thou shalt", or "Thou Shalt Not" drive over 45 mph, for example. Whether you get caught for it or not
is immaterial; it is still a matter of willingly speeding.

"Agreed. And I will maintain that a cop will pull you over quicker for doing 67 in a 65 zone in a congested area a helluva lot faster than he will for you doing 67 in a 65 zone in the desert flats."

In the matter of "freebanding", the laws (OK, rules which have the backing of law)
state certain "Thou Shalts" and "Thou Shalt Nots". One of those "Shalt Nots" is to
operate a transmitter on a frequency for which thou art not licensed.

"Ok. To better illustrate, freebanding is not bound by law. Some would argue the sole act of freebanding can be compared to a form of anarchy.

I don't consider the junior high kid on his FM neighborhood broadcast station to be an intentional anarchist. I don't believe the government deems the offending DXers near as dangerous as is made out among these pages."

It does not matter
if the frequency is used daily, infrequently, never, or is vacant. If you get caught at
ANY "victimless" crime,

"There arent many "victimless crimes", and laws that exist that do support such should be abolished, in this case, ignored or disregarded."
will it do any good to argue before the court that it was OK because nobody got hurt?

"Yes, I believe it will. To use an analogy you referred to earlier, a perp busted for a B & E that has burglarized an occupied dwelling will receive a more severe punishment than he would as for burglarizing an empty dwelling. It may even be the difference between a burglary or a robbery charge, or both. This echoes my sentiments that the severity of the "crime" of freebanding is reflected and evidenced directly by the number of infractions vs. prosecutions."

I doubt it because the judge is going to check to see what law was broken and if that law says "Thou Shalt Not", he is going to apply the law and the
punishment that applies.

"Judges have more discretion than you give them credit for except in the case of mandatory minimums, and they are wrong, too. It deviates from the entire concept of justice and a jury of one's peers."

Again, back to the "TRESPASS" concept: If you see a sign that says "No Trespassing", and you cut thru the pasture and get caught by the owner, you will
face the music if he decides to press charges. Did you "hurt" anything by cutting thru his land?
"Well, to be fair, you said there was a path worn..that may be construed as damage."

No. You were informed not to come onto his land. You got punished simply for BEING there.
"See above."

That's the way the law is regarding the so-called "freeband". YOU will get
punished, if caught,
if the "cop" (FCC) catches you simply because you "trespassed", encroached upon, used, vio-
lated frequencies that aren't "yours" to use. sounds like channel 19 now, and quite
frankly, if I had the permission and the means, I'd like to key down with a gazillion watt AM

transmitter and blank out every illegal idiot on there! Again, they are cutting across "my" pasture
and trespassing on "my" turf. But I cannot do that. If the freebanders will usurp forestry frequencies, then go onto 10 meters,

"So you throw the baby out with the bathwater? Indviduals MAY go on ten meter because they hear me on an abandoned petroleum freq? I seriously doubt that scenario. Even if that were to happen, as isolated as it would be, it is up to the operator to know where he is transmitting at all times.
Hell, Jer, using that analogy, you better clean that 2 meter band up real quick. If a newbie licensed hammie hears something like the Liberty net, they MAY go wild on ALL the other hammie freqs 'cause they think it's ok. Utter Balderdash."

Response:
WILL go onto 10 meters? They are already there. I can sit during any day and listen to 28.085 (the most popular one) and hear the truckers all over the
country! I doubt it has anything to do with hearing a particular individual on his
favorite "freeband" frequency. This issue has more to do with the greedy truck stop
shops selling "export" radios with "them thar 'extree' channels thar". The
truckers
don't really know where they are--they've been told "channel 19 2-up". And
I know
this: They are getting caught by hams who are sick and damned tired of it.
Am I one
of the ones trying to catch 'm? YOU DAMN RIGHT! I don't really care what fellas do
dnwn on CB so long as their operations don't mess me up.

"There it is. We are back in agreement again. Bust 'em, report 'em, take numbers and kick ass and take names if they are buggin' ya!" If they're not, it's nun yo' biz, you ain't the law and anyone that acts like they are can not expect anything but a hostile response in return, maybe ignored at best."

But when I attempt to call
CQ on 28.085 and hear SQUEAK! BEEP!, etc, then they are trespassing in MY pas-
ture. I've got my tape recorder, camera and notepad in the car, and if I hear one on I-85
while I am out there he is NAILED.

"Well, you at least have some accurate information to send along in your report. It doesn't automatically constitute his guilt, as an official law agency or it's authorized agents must witness illegal

transmissions."

Now that shoe fits both feet. If you hear clowns, yes idiot HAMS, on 2 meters, then why
don't you turn them in, or complain to the control operator? I would. Mr. Hollingsworth is
doing a great job of cleaning this up, but he can't deal with if if he doesn't know it. Around here
that kind of behavior will not be tolerated--the control ops will drop the repeater right out from
under them. If you are talking about dumb, inane conversations, well, you can't regulate stupid!
The 3950 guys will take care of themselves:

"And so will the DX interference."

if Riley hasn't gotten around to them, he will. onto 12 meters, then down to 17, where does it stop? The asnwer is, it won't!

"This too, is BS, Jerry. Don't tell me how it doesn't stop, because I have been talking on the same freqs since the late seventies and I have no inclination to foray into your MARS freqs, VHF, or any other hammie freq. and most freebanders are polite, mindful, and considerate, even to the point that I can listen to them all night and day and not hear nearly half the problems I hear on the staright 40 or hammie bands. It stops where it always has with most organized DX club freebanders. You are beginnig to sound paranoid that freebanders want your hammie freqs...trust me on this Jer, we want nothing of the sort. If we did, our ticket would be on display, we wouild think it made us "smarter" and we would be talking with other hammies on permitted freqs, but we don't, and we intentionally avoid the hammie bands like the plague. "

Response:
With all due respect, TW, how can you speak for all "freebanders"?

"Seriously, Jer. I don't profess to speak for all of them. I feel comfortable speaking for the ones I am seemingly familiar with. Listening to fellow DX club members and their behavior on the air, some for many years, has given me at least a glimpse into their operating techniques. We do have many, perhaps a great number more than some would wish to admit, of hammies that are club members. I can't even remember the last time I had, or even heard an altercation while DXing there, other than the usual on 555. That's one out of many freqs."

In the ham bands, we have "renegades" just like in CB--just read RainReport to see that.

"Yea?, Well in the freeband and cb we also have hammie renegades."

It is those renegade operators, hams and freebanders alike, that are bring adverse attention (ITU) on their hobbies. hy ITU is addressing this issue--to draw a line in the sand and turn back the stampede of unlicensed intruders that is coming IF such is ignored. It is not only

the US that is affected by this; complaints are coming from all over the world. "tis just the way it is.
Jerry

"Is there a specific URL for the ITU?"
-
"And we will roll with the changes, as we always have. I take no issue with your reasoning concerning hammie band intrusions, but not all freqs are used, and not all freebanders use dirty equipment. After 20 plus years of continual DX, the only problem I ever encountered concerning those activities are the cry babies right here in this forum. Nothing else, ever. And don't tell me it's luck, 'lest the entire American contingency of the Alpha Tangos, Sugar Deltas, Charlie Michaels, etc., etc.,have been riding one bitch of a wave of tremendous continual luck for over 30 years. I also understand your frustration that causes hammies to take aim at intruding freebanders.....no matter how incorrect that aim may be. You are absolutely correct defending "your" turf, if you truly believe that. My objection isn't with that point. Matter of fact, I have no objection at all, it's the direct opposite. It appears the same few are taking objection with my maintainment that I bother nor hurt no one while ragchewing on my fave DX freqs. The objections are all redundant and contaminated with personal prejudices and "what if's?"

TW, I truly say this without personal angst.

"I know you do, Jerry."

I don't know about "incorrect aim".

"Sure it is. I don't jam you, harass you, bleed you, or any of the sort, but since I am a freebander, I take my lumps from those that are wronged by those that do hurt the image. Its part of the package and I accept it. Difference is, I don't throw all the hammies in one class based on the few mindless no codes we have present here."

I will defend my turf. No need belaboring the point. I only respectfully point out the following, and I don't mean it to be smart aleck or ugly in any way.
When it is all said and done, no matter the personalities, the anger, the arguments,
and insults, the law is against "freebanders". I know you won't argue with
that, and
if you got caught, you would face the music. The law IS on the side of those griping
hams, yeah, those grouchy old men whom so many CBers disdain.

"Or those grouchy old men who hold cbers in disdain. My first introduction EVER to the ridiculous concept of "us vs. them" mentality between cbers and hammies was right here. It is the few hammie no codes here hell bent on keeping it that way."

If you had to go to court with the same arguments you put forth here, do you believe you would win
your case?

"Depends what I was in court for. You don''t go to court for merely freebanding."

Finally, let me say this in defense of Amateur Radio.

"I was not aware I was viewed as being on the offensive concerning amateur radio, and you certainly have nothing to defend, Jerry. Your view is just as important as the next guy's, in many cases, more important...you don't get ignored or killfiled...yet..keep talking rationally and the anti's will be on your azz. Your ability to express an opposite opinion without reducing yourself to the level of an insecure child speaks directly to the anti 3."

It is NOT made up primarily of
"grouchy old men" with nothing better to do than whine about their aches and pains.
Unfortunately, the
IF
I wanted to find those old farts, I certainly can. I can dial thru the CB channels and find
them there, too. There is NO difference in CB operators and ham operators. We live,
we eat, sleep, work, and put our britches on the same way. People tend to form "cliques"
or circles of friends in all kinds of endeavors: work, play, church--anything. For example,
if you come thru here on I-85, you just might hear a bunch of us local hams on 28.610 scattered
out in a 35 mile radius. This just happens to be where we gather, especially when the skip is NOT
in, mostly at night. We talk about radios, (of course), current events, tell jokes, talk about what's
been going on that day, tease each other (mildly), and engage in health doses of laughter. I can't
find any evidence of old farts on that frequency! I really wish YOU would take advantage of what ham radio has to offer.

"I appreciate that, Jerry, I really do. There exist some aspects of ham radio that holds my curiosity. There is some really neat experimental stuff taking place, especially way down low."

Like CB, it will become what YOU make it. I have run into curmudgeons on ham radio, I told them to kiss my grits and moved somewhere else. There are fine, fun, and
motivated people in the hobby. You just have to find them.

"No doubt. I agree. I feel the same among some freeband freqs.. Some of the freqs. are full of great folks, night after night, the only difference separating us, is that teeny, little matter of legality."

Best 73, and I am enjoying our debate!

"It is refreshing. Now if I can get some of these guys to continue discussing amp classification and continue the arguments supporting each point of view, I can get back to printing, er, writing down and comparing what amps are clean and which are filthy, all for personal knowledge of course.."

Not. Try Ken's Electronics or RF Parts, both have good crystal stocks
(last time I checked, anyway). You might also try AF4K's site, he has
lots of crystal links, including some swap boards. I don't have the
URLs handy, but you can find them on my links page,
www.cet.com/~sparky/links.htm

Sure thing, Phil. But on the condition that you won't release that
information to anyone on or off the newsgroup without my permission.
So where do I send it? And how do you intend to verify my home address?

Hollingsworth is beginning with the ham bands because hams raised enough hell to get him appointed. His title is 'Special Counsel for Amateur Radio' BTW. And if you want to see some the results just go to Rec.Radio.Amateur.Misc where a few idiots that have been Rileyed now find it safer to conduct their stupidities.

Apples and Oranges, all right. The Amateur Service cared enough to begin the resurection of the Enforcement Bureau.

Dick N&#65533;BK

Not a lot, being a Cybernet Chassis.

id also like to
> know who makes it (cant find anything on the web about it).

Cybernet, the same people who made the Midland chassis.

and what
> mics will fit it (power/echo)

Nearly any microphone can be fitted to nearly any radio. Some present
little problems (like not having a "receive" wire), but they can be overcome
by a technician with limited knowledge or problems.

Maybe someone wants an antenna for an 11 meter station?

Maybe someone amateurs are looking to get an antenna for 11 meters, and
already have one for 10 meters?

I can think of half a dozen reasons (LEGAL REASONS) to mention it. You are
so damn narrow minded that you can't, and have to egg others on to do your
thinking for you.

What ham calls a fixed station a
> "base" anyway?

I know of a few here in the local area. Most aren't CBers as well.

That theory is shot to hell.

LOL.

Aaron likens illegal CB radio operation to drug dealing, terroristic activities and driving over the posted speed limit, as well as others. In Aaron's mind, their is no "gray area" (of course, we all know the grey matter is missing from betwixt his ears), no reasoning that someone with a licence for the ARS would be in a *gulp) cb radio related newsgroup, et al.

Of course, most trolls think the same way.

It isn't.

Maybe the seller is wanting to ensure that the equipment won't be used illegally.

He is TOTALLY within his rights to require that the seller show proof of legal usage.

If you don't have a license, purchase the stuff from a retailer. God knows they will sell to anyone (and yes, Aaron, so does HRO, AES and the millions of mom and pop amateur radio stores in the US).

I see it as "the federal government tired of the constant problems that where brought to their attention via letter writing and phone calls, and as such, they got a "cop" to police the problem area (spectrum).

Reading anything else into it is utter gibberish.

His title is 'Special Counsel for Amateur Radio'
> BTW. And if you want to see some the results just go to
> Rec.Radio.Amateur.Misc where a few idiots that have been Rileyed now find
it
> safer to conduct their stupidities.

I am not saying he is doing a bad thing, nor am I against what he does.

Nor do I disagree that the idiots running class C boxes, dirty overmodulated radios (see my problem with Eitner and his advocation of clipping limiters, etc) or trashy equipment need to be run off the air, given stiff fines, etc.

However, the person running a clean station, that has fun on his radio doesn't need to be bothered, either. I can run 3Kw - 3500 watts around my neighborhood and have no problems with any of my neighbors. However, I can also hook up a driver amp, and a CB radio and take out the entire subdivision.

I have ALWAYS been an advocate of running power, but running power CLEANLY.

>
> Apples and Oranges, all right. The Amateur Service cared enough to begin
> the resurection of the Enforcement Bureau.

lol. I doubt that very much. Please cite reference to the claim (not calling you a liar, but I don't think that it was ARS that brought Hollingsworth on, I see it more as the Senators and Reps. getting tired of the constant complaints). However, you may be right, what with the @$$holes that proliferate 75 and 2 meters. I may be wrong, but I doubt it.

Yes it is. Electrodynes president is of course aware of the AC crowd who
use his products.

He did tell me that the above unit will kick out 385 @ 5000rpm, I know
you'll say more if you spin it faster.

Also yes to the mainly SSB use.

Maybe one day I'll get my act together and bust a hole on CH6 but from
here in Europe I somehow doubt it in my lifetime. The conditions would
have to be running just right + Pee Wee and his yagi.

Group: rec.radio.cb
Date: Mon, Oct 22, 2001, 1:34pm
From: joxendi@bellsouth.net (Jerry Oxendine)
TW,
I most heartily enjoyed your answers and rebuttals to my points. This should be a lesson to others
who would debate an issue on how to do so without becoming childish and flaming each other.
I won't intersperse comments because the posts get quite long when you do that.
Yes, indeed, there is MUCH to be offered in ham radio. One of the areas of experimentation is
in the LOWFER area (100-200 KHZ). And the experimentation in satellite comms is ongoing.
I am hoping to make another contact with the Space Station on 2 meters. They were on last
Saturday for the Scouts Jamboree on the Air (JOTA) where scouts were given priority and
a chance to speak to the station directly. I missed that because of company. (DRAT!) Person-
ally, I am grateful for what Amateur Radio has taught me. It doesn't make me smarter, but it
has allowed me to receive an education in many facets of electronics--like the screwdriver
multi-band antennas I build. I like the fact that I can make phone calls from the car for free
by dialing up the auto-patch. I enjoy DXing--likeSaturday while waiting for my daughter at
WalMart when I made a contact on 10 FM direct with Leipzig, Germany.

"This is the sort of thing I enjoy. I hardly ever shop anymore, always in the truck waiting for someone, Dxin', shootin' skip."

Or the time I
had multiple QSOs with a USAF tanker on 40 meters as he traveled from S. America up
thru Panama, Texas, and Charleston AFB, SC.

"I talked to a fishing boat twice in the Bering Sea, different freqs, about a year apart, same captain...I thought that was neat."

I picked up with him the next day as he
went up the E. coast to Dover AFB, Delaware. The flight engineer was a ham and was using
the onboard HF equipment to pass the time away. (Yes, it is legal

because it meets standards
even more rigid than FCC's.

"You won't catch me asking you about your legal status."

Oh, BTW, I ordered a Harris RF-230 military transceiver for our CAP squadron out of Texas
last week. Should be here by first of next week. Covers 1.6 thru 30 MHZ at 125 watts out.
Has a matching power supply. Reeally neat mil. spec. rig!
Anyhow, I think you SHOULD take advantage of Amateur Radio and take part in the things
that excite you (except freebanding! LOL!).
Those old buzzard hams can be
avoided. Think
of the spectrum you'll have available!
We may never agree on the issue of intrusion onto unauthorized frequencies ("freebanding"),
but we can do so in a friendly way--heck, I'm enjoying it.

"Absolutely. I always enjoy an exchange with you, Jerry. It's been a long day down this way, today. I need to go for a swim and a jacuzzi then settle in for some Monday night football. Did ya' see that hurtin' the Steelers put on this team they call the Buc's? Hehhehe..the only real football in this state happens to be at the University level. Anyway, I enjoyed the stuff about the ITU. Where can I get more info? As for the time being, many more changes need advocated and implemented before I personally would endorse the notion that the prerequisites and requirements to obtaining licensure are justified. Should circumstances change or arise that dictate I would be better served by such, I would reevaluate my position at that time. Why not just use social security numbers as calls? It's required anyway, and once a call issued, it's almost like publishing a segment of your life for the world."

73
Jerry

"Have a good evening up that-a-way!"

I've had more problems with ham radio operators than I've had with CB radio operators. I've been on CB longer too. Until several months ago, it was safe to come in here and I wouldn't dare go into the .policy or .misc ham groups. I almost did not get my ticket because of what I saw on there. Decent people? Some of them, I've met some weirdos and some nasties at hamfests.

Plus I can turn on my CB at night and still talk to someone at 2 in the morning. Try that on 2m. HF, well antenna problems keep me away from that anyways.

The majority of hams are decent

Source record: 101453

Last time I checked the Antron 99 could be used on 10/11 meters. Most catalogs list them as that. I think even into 12m, IIRC. Last time I talked to someone who worked all three of those he said he was using an A99 antenna.

> Hm. 10 "& 11" meter "base" antenna? Why would the 11 meter capability
> be important to mention in this ad?

What ham calls a fixed station a
> "base" anyway?

Plenty of them. What does that have to do with it? Some people call it a Shack, some people call it a Radio Room, some people call it a Station in both hobbies. Big deal.

Well that must suck. You can't say "I enjoy high power CB operation"
when meeting a fellow ham. You can't get on the ham bands and discuss
the joys of high power CB. You can't pick up a copy of QST or CQ and
find tech articles about high power CB operation. Unless you want to
be labeled as one of that creepy minority of hams who intentionally
break FCC laws you have to keep your high power CB "hobby" a secret.

Bert, I don't think you are a keyclown at all. I just don't understand why
you want to get the limit raised if you get your extra class license. What
need would you have to Dx on 11 meters then? I could see if you still want
to talk on the Cb to friends etc but Being a Extra class Ham and a lifelong
Cber and wanting to DX on 11 is not something that i would want to do nor
would I expect many to do why spend time trying to get the limit removed or
raised, when 11 meters is a cespool.

36 usb hmm your the guy the locals keep hearing on 36 ssb, The funny part is
they get mad when they hear SSB on channel 36 of course I try and tell them
36-40 is generally regarded as the ssb portion of the band. Then i have to
sit and listen to how they cant stand SSB becuase you have to tune everyone
in then I have to jump in and tell them if they kept there hands out of
there radios everyone probably would all be transmitting on the same freq.

Believe it or not, yes, he would still have a chance of being heard
when you are "keyed up" especially in single sideband mode when you
would be emitting basically no signal at all unless you were speaking.
The second you stop talking, even if your transmitter is still on, he
can be heard regardless.

Furthermore, the propagation path from your location to the receiving
station may not be as good as the path from his location to the
receiving station. If I'm on the east coast and in the greyline along
with a station on the east coast of, say, Australia, and you're in the
midwest...the greyline enhancement on my signal at the receiving
station might be the difference that allows me to (as we used to say
on the CB band back in the 70's) "walk the dog" so to speak.

>Typical argumentative "I am holier than you, and my antenna system will whip
>your linear's butt".

It isn't ONLY power or ONLY the antena, Toll. You key up with 10,000
watts on AM, and if I key up with a "measly" 100 watts P.E.P. on USB,
my signal will ride your carrier right to the receiving station. I
will be heard. Get a shortwave receiver and park it on 10 MHz at night
and eventually you'll hear the proof of this concept in the
Spanish-speaking sideband stations riding WWV's 10kW AM carrier across
most of North America.

>Notice how he only quoted PART of my text, since if the rest was taken into
>account, it would make his comment fecal matter.

I think neither of you took everything into account. I haven't either,
since I'm not here to write a book on basic communications theory.
What we're saying is that there are less expensive and more efficient
ways to get your signal to a desired location - without interfering
with everyone else on the band for 500 khz on either side of you.

Illegal is illegal no matter how clean you try to make it.
Ninenty-nine percent plus of the hams run legal, ninenty-nine
percent plus of cbers don't, something the cbers seem to be proud
which tells you the character of cb radio.

Leave the radio alone. It will sound better and last longer if
you don't try to squeeze every last drop out of it. I run
barefoot 90% of the time in my mobile. When more is needed,
I hit the switch, usually on the lowest setting.

I still use stock mikes. The right mike can sound clear and
loud when not being muffled and distorted by overdrive.

Thank you Jerry
From what I have read in the past couple of months I have been lurking,
is that you care for the rules & Regulations concerning the use of CB and Ham
freqs. At the same time while you don't agree with frebanding, amp use on
cb, you don't come on here and try to "preach the word" either. You explain
that those activities are illegal and face possible fines, but at the same
time you try to answer the technical questions that are asked.
Good for you! stick to your views and values, you are rare breed for
this group.

why not? is it wrong to post a Lamburghini Mura S in a classic
car group? How about a 1965 Mustang in the regular ford group?
The more exposure, the better chance of a sale. You put way
to much of an illegal spin on everything.

I will concur on this one, both those places are very good
sources for crystals. Another place a few years back was
called scanner world, they had a large assortment of them,
not sure about the url either,but try a google search and
see what comes up.

Easy. Each doubling of output power gives a 3 dB increase. If I have
a million watts and you have two million watts, your signal isn't
going to be twice as strong.

>So, if your running equal antennas as I am, and I run twice the output power
>that you do, you still have a chance of being heard when I am keyed up?

Good point. Equal antennas will mean virtually equal signal.
Doubling the output power gives a 3 dB increase. That's less than
half an S-unit. If he's running an S-9, and I have an equal antenna,
that means I'll be slightly over an S-8 1/2. That's not much of a
difference.

A better idea is to apply the same silly logic to their own personal property, like a fishing boat for example. Since they seem to make little to no use of it during the week it should be just fine to let any yahoo jump in it and take it out for a ride. After all they weren't using it all the time, or even most of the time, while letting it sit there unused is a waste thus somebody else taking it out for a joy ride isn't going to hurt them. Of course if by some chance they do show up to use it, and find some other unknown, and unauthorized yahoo, using their boat, well they'll just have to cool their heels until the boat comes back, or go find another one to use. Fair is fair. Just make sure they leave plenty of gas in the tanks.

If you haven't notice all of those arguments about frequencies being unused etc. and thus OK to hi-jack they believe because they are the ones taking the property, or the use of a limited resource, away from the rightful owner or user. When the situation gets turned around, and they find themselves being the wronged party, their tone and argument changes radically.

Finally none of these guys have never mentioned, or documented, a court case involving the FCC, where the tired old argument (about using so-called unused frequencies doesn't hurt anybody, thus OK to use) has ever saved anyone from being found guilty in an administrative court of law for violating FCC rules. Instead the pirates leave the court room with a fat fine to pay while their gear ends up in a car crusher somewhere so it never gets back out there to be used illegally again.

Well no reply, so either you were trying to stir up trouble or you realize I am here.

I enjoyed my day off, I walked down to the USS Intrepid museum, then walked to the port authority terminal and took the c train to spring street, then walked west to cross verick to the N.Y. Fire Department museum, they have got some great old equiptment in the apparatus room there, reminds me of the pictures of my grandfather on the equiptment at the station back home many many years ago.

hope everyone had a great and a safe weekend.

Been done, described, and beat to death.

Besides, your right on the money. For that small of a bandwith, people do
the log
periodic type feed, using dual driven elements. One tuned for the 29 mhz
region, and
another tuned to 27. Works fine business all around the typical RCI / 2510
/ Clear Channel
radios ranges.

Check the ARRL antenna compendium. I think that is where I saw one. Not
sure which
volume, though, and the books are packed away out in the garage atm. :/

I agree. The newer Cybernet radios don't do well when peaked up. Either
shitty audio (a la Cobra 19 plus with
no mod limiter (YOU LISTENING BILL EITNER?? That chassis sounds like SHIT
with no limiter, you have
to change time constants to get any more audio out of it) or they soon die.

Get a small box. You will be much happier with the results.

Besides, most Tri-Star radios have the silkscreens on PC Board to tell you
what each control does. If you don't understand
the difference between ALC and AMC, get out of the radio.

Actually, Aaron, someone else was on the newsgroup selling a Kris 6&10, and was only willing to sell to a licensed amateur.

So, you see, people on rec.radio.cb can and do make good deals among each other, and have no problem with the legality bullshit that Aaron likes to spew.

So many UK people now have an automatic withold on their number being sent.

It did seem rather crazy... They spent all that money setting the system up, then allowed everyone to withold their number. To view callers numbers, you have to pay a fee for the service. It's just not worth paying to keep reading the words "Number witheld", so I gave up on it.

Regards,

Brainbuster.

Hello Radio enthusiasts,

Welcome to 10th Rheintal Electronica 2001
Date : Saturday: 10th, November 2001
What : Radio-, Electronics- and Computer-Fair
Where : D-76448 Durmersheim (Germany, Europe) south of Karlsruhe
Autobahn A5 Frankfurt - Heidelberg - Basel, Exit Karlsruhe Sued (Rheinhafen)
opening: 9.00 hr (a.m., CET)
closing: 17.00 hr (5.00 p.m., CET)
Where exactly: "Hardt-Halle" at 76448 Durmersheim
Parking: Free of charge Transfer from Parking-Lot to the fairground
Public Transport: Regional-Train S-Bahn S4 from Karlsruhe to Rastatt, leave
at "Durmersheim-Nord"

Directions:
Amateur-Radio : 145.500 MHz (call DF0RHT)
CB-Radio : 27.135 MHz (CB-Channel 15 FM, AM possible on request)
What to find: Amateur- and CB-Radio equipment, Transceivers,
Antennas, Computer, Periphererial, Software, Hardware,
Components, Literature, Additional Accessoires

Local Usergroups and Organisations for CB- and Amateur Radio give
Informations about Radio, Computer and applications.

Contributions, Discussions (in german language) to the following topics (See
below)

Information Program (in German Language)
---

ca. 9.00 hrs Opening
Topics:
- GSM, UMTS & Co.
- Basics for home-brew radios
- Coaxial Connectors: Tipps and Tricks
- Radio for everybody: PMR446, LPD, Freenet, classical CB-Radio (27 MHz) - unwanted radiation of Cablenetworks for Radio, TV, Internet, Telephone - Internet-Radio
- Antenna Problems, Reports, new Antennas, Modifications and more - Q & A for operations between 144 MHz and 5GHz

16.00 Uhr Opinion-debate "Sagen Sie uns Ihre Meinung" with lottery

^ and thanks for the links. It will prove to be interesting reading.
^

You're welcome.

I hope you do find them interesting, I found several documents of interest...
and I haven't got through half the site yet.
I usually click all the links of interest on a site, then go off-line to read
the pages from the cache.

I will bookmark that site, as I have so many other sites. My "favourites"
menu is getting rather full. I am also adding a link to the RA site on the
links page of my site.

Hey Tim, what part of Texas are you in?
I can tell you a whole lot about Austin, San Antonio, Huston, Santa Fe,
Seguin. But I don't live there, but have relatives that do. So just
because they know about a town, doesn't mean they live there.
But what part are you in?

You are very correct Toll. By the way, maybe the antenna was packaged
and marketed like that. You buy a Antrron it claims to be a 10/11
meter antenna,
also Shakespear makes that very same claim. I believe that Maco makes
that
claim for the 5/8 wave antenna too.

> integral antenna, the maximum effective radiated carrier power is limited
> to 4W).

Hi,

I assume that the "integral antenna" rule means that the power output
of such equipment is not limited... the actual field strength from the
antenna is limited instead. Some old UK handhelds had a fixed antenna, with
no actual socket, and so this measurement could be more practical.

The original rules were 4 Watts from the radio, and an ERP of just 2 Watts
with ANY system, but this was changed some years back. I still have some of
the old rule sheets sat around from years ago.

Regards,

Brainbuster.

>Bert, I don't think you are a keyclown at all. I just don't understand why
>you want to get the limit raised if you get your extra class license. What
>need would you have to Dx on 11 meters then? I could see if you still want
>to talk on the Cb to friends etc but Being a Extra class Ham and a lifelong
>Cber and wanting to DX on 11 is not something that i would want to do nor
>would I expect many to do

I appreciate that. You want to Know something even stranger? I fully expect to likely never work any DX on 11-meters ever again. What little I'm doing is because I happen to believe it's the best thing for CB. Should the unlikely ever happen and the limit be lifted, I'll be busy with other things. Fortunately for me, I've been very lucky to not run into the hordes of lids I've heard so much about. Sometimes I feel like I should apologize for that, but "them's the facts!" I know they exist but I've seldom encountered them. Yes, I'll eventually be an Extra and enjoy the privileges that come along with that, and yes, I'll also keep half-an-eye on 11-meters, but I'll be happy to have made the effort. (Successfull or not.)

>why spend time trying to get the limit removed or
>raised, when 11 meters is a cespool.
>

Like I said, it's really not allot of time/effort and I've seldom experienced the cesspool.

>they cant stand SSB becuase you have to tune everyone
>in then I have to jump in and tell them if they kept there hands out of
>there radios everyone probably would all be transmitting on the same freq.

Are there any modes other than SSB or CW? :-)

>Mark, I mean Bert

Then I simply must insist on taking receipt of his salary and ownership of the new house.

>I was just actually breaking balls but Mark does always
>reply to you perhaps the fact that you guys are friends may have something
>to do with it

I actually used to reply to Mark's threads and semi-supported some of his 11-meter related ideas. I established e-mail contact with him (As well as Alan Dixon, Ed Barnat, Harold Ort, and others on the NG.) and discovered that he was employed by a different division of the same company. One transfer and a relocation later resulted in a friendly visit to my cubicle most mornings and a local Morse partner on 25.1250 MHz. Yes, we are friends.

>I have never insulted you or used profanity towards you

Then what was the sin that earned me the "ball breaking?" Have I offerred any amps for sale? Do I advocate "freebanding?" I just want those who are willing to try to change a rule the right way rather than ignore/break it. It involves some politics, but what's written on a bumper sticker is NOT the airwaves and is meant for politicians. (NOT the FCC) I've been in "kitchens" allot hotter than this one, but it does wear me down sometimes.

>perhaps you think I am someone else.

I did at one time. Take it easy.

ever read a spec sheet for a tube? max current and voltage suggested is listed.
have a look, once you exceed both you have sucessfully overvolted and made your
tube draw too much current.

>
>how can you feed somthing too much current? a device and only take in as much
>current as it needs assuming it is available

I know it doesnt have anthig to do with CB. But i understand you are gonna suggest fm because there is no hetrodyne and only the stronger signal is heard.

But you asked why it isnt in cb key downs and im telling you that cb is am. have a good daaaaaaaaaaaay.

How many ham radio keydowns have you seen? Hams have better sense
than to run tons of illegal power from a chevy truck with 12
alternators strapped together driving high count transistor
'lenyars' producing splatter over the radio spectrum just so they
can 'out key' some other moron for some stupid bragging rights.

Or maybe the MOOSELIMS complained.
Our authorities have this annoying habit of bending over backwards to accommodate every other race and religion, while stuffing their own people.

When my daughters school "PTA" do anything for the children, it must not involve anything to do with the christian religion, as this may offend the two "jovos" or the one "MOOSELIM" in the school (serious figures!!). For the sake of about three children in the school, all others must go without.

> since Tony himself is an Anti-Christ buddy to Anti-Christ Billy Clinton!
> Blimey! I wish you Britts would vote him out, IF you can!!!!

Have you seen the alternatives?

It's like being asked if you want to be shot, poisoned, or electrocuted. The end result is the same, it's all about the length of the jouney, and the pain involved.
Let's face it, you would rather live, but that isn't on the menu.

I suppose there is always the "Raving Loony Party"... maybe we should all vote for them.

Regards,

Brainbuster.

Hi Itsallgood

If he "upgrades his ham license", sure that may benefit him....
But if he can help to get the dx rule removed, this would benefit many CBers.

So maybe he cares more for his fellow CBers than he does for himself.

Regards,

Brainbuster.

Yeah, I guess when guys are yelling CQ Contest Cq Contest that is not a form of a keydown. Yes they have better sense, instead they run big power out of there house and not a mobile. The hams braggin rights are qsl cards and the Arrl Contest Plaques braggin rights, getting there name in Qst. Lay down Mud duck!

You are correct that the link you gave was as Aaron posted some time back.
But I remember that I couldn't get the link to work back then.

I know that Aaron will say that he never posted the incorrect URL, so here
you go...

"Aaron H. Voobner" <voobner@yahoo.com> wrote in message

When you give a URL with no document name the server will look for a file
named "index.htm", "default.htm", or something similar. As Aaron has decided
to call his file "voobner.htm" it should be included in the URL.

http://www.geocities.com/aaronvoobner/voobner.htm works for me.

An experienced operator would not "key up" when you "key up."
Instead of trying to make it a competition about who can shout louder,
he will likely bide his time and wait for the opportunity for his
signal to be heard. He will also have enough experience to know when
and where to look on the radio dial to avoid that type of garbage.
But, even if he did "key down" with half the power, your signal would
not be that much stronger - twice the power does not equal twice as loud.

What is a "keydown," Toll? I envision a dozen or so drunken CB'ers sitting around a car wash parking lot transmitting at the same time to see which can be heard over the other.

> We are not talking about comms,
> we are talking about a shootout
> competition.

What is a "shootout competition?" Is this the home version of the car wash "keydown?"

Somebody must've smacked you upside the head with that "plank" you keep
ranting about. If you'd (or were able to?) talk like a normal person, maybe
we could make sense out of what you
say. Ten meter radios in a truck stop---yeah, right!

Toll Free wrote:
>
> Hollingsworth went after the ARS
> before CB radio service. You
> wonder why?

Three reasons. Most ham operators invite that level of enforcement,
ham radio contributes more so is more valuable to the country, and
Amateur radio is easier to police because there are less problems to address.

> ARS is just as dirty, just as
> political, and has just as many
> bad apples as the CB radio does
> in proportion. When the US ARS
> service has as many people in it
> as the CB service does, then you
> can compare the two. (snip)

You have got to be kidding. There is routine garbage on the CB
frequencies that is very rare, if not totally unheard of, in the ham
bands (decent women afraid to even open their mouths for fear of
sexual harassment, widespread illegal equipment and operation, threats
of violence, and the list goes on). Ham radio, even on it's worst day,
is not even close to as bad as CB on it's very best day.

> Hence the problem with ARS
> operators getting busted for
> signal jamming

Once or twice a year, while a daily routine on CB.

> Hence the problem with ARS
> operators building illegal output
> amps.

Extremely rare for both radio services. Hams rarely operate illegal
power amplifiers, while most CB'ers (99%) would not even know how to
build an amplifier. However, if you compare the USE of illegal power
amplifiers (including those purchased), this is again extremely rare
for hams, while commonplace for CB'ers.

> Hence the problem with ARS
> operators and them building
> illegal 11 meter amps.

Again, extremely rare for both radio services. Most CB'ers (99%)
would not even know how to build an amplifier, while very few hams
would build illegal equipment for CB'ers.

> Blah Blah Blah.

Got any more of them, Toll? Why don't you talk about the treatment
of women on the CB frequencies? And we're not talking about the truck
stop prostitutes that hang out on channel 19 (even though most of them
are now avoiding CB also).

Thank you! I reckon I am just the sort of fellow that's like a snapping
turtle; once I get hold of
an idea, I won't turn loose 'til it thunders! LOL! But, I do try to present
my ideas in a way that does
not insult people--there's no profit in that. I agree with legal
operations, that's true, but I won't get
caught up in Voobner's tirades and insults. To me, that does more harm
than good in that it makes
all Amateurs seem like grouchy curmudgeons, makes those that DO operate
illegally dig in , and,
perhaps, makes them that much more determined to do so. NEVER pull a tomcat
backwards!
Gently nudge him forwards so those claws can't hurt! LOL!

> The Man your Mommy calls Daddy

Thanks for clearing that up -- I always thought that the whole purpose
of radio communications was communications. I didn't realize that radio
was invented and developed for 'shootouts'. With that in mind, the FCC
and the ARRL need to rethink the rules of the game. All those QRP rigs
are for people that don't have a life, I guess. And what's the point
of using a microphone? Just make a big switch, the bigger the better
(which seems to be the mentality of radio engineering these days, huh?)

BTW, my mommy has been dead for quite a while, so I guess that makes
you a necrophiliac.

I've talked to Antartica, Argentina, Japan on 28MHz (ham 10 meters)
using a lousy attic dipole and 100W rig (TS440SAT) so you don't
need kilowatts of power when propagation is good.

Get a "general" ham license, only 5 words a minute code test now
and some multiple choice written test.
Look at http://www.aa9pw.com/radio/exam.html for practice
tests.

You can then use a linear
legally on many ham bands, AM, FM, SSB, digital modes, and there
are many HF SW bands with differing long distance DX "skipland"
propagation characteristics. Many work just fine when "skip"
is dead on CB 11 meters, like when the sunspot cycle bottoms out.

Don't feel blown off by a previous bad experience with a ham
club, there's many more out there that you'll like.

Dwight IS correct! Again, it isn't the biggest "box". Remember, those pileups are being generated by signals from all points of the globe trying to reach one single station. The way YOU hear that pileup will likely be different from that of the intended DX station, or the varied participants in that pileup. Atmospheric conditions, "ducting", weather, the layers of the tropo--all play a part. It is quite possible that one guy could be running 1500 watts, but the path isn't favorable between him and the DX station, and the DX station answers a 100 watt mobile from a different direction/location because the path or "skip" is favoring him. I know because I have done that very thing.

I know that the issue of BIG POWER is something that will never be diminished in the minds of some people--kinda like the coax length thing (Lordy, let's not get into THAT again!), but huge amounts of RF power is not always the answer. If mother nature is not in favor, you can run a gazillion watts only to have it all for naught due to the factors already mentioned AND atmospheric absorption while a teeny little 4 watt station gets thru to theat DX station you wanted so bad. I talk all over the world with as little as 5 watts when the conditions are favorable, and it works just as well as all those huge "boxes" that are so reverently worshiped as if an altar. I know hams that, even though they know better, run amplifiers ALL the time--full legal limit because they think they sound better--Loud and Proud> but I get the same job done on 5-100 watts. I had a very nice QSO to Leipzig, Germany Saturday on 50 watts FM. Guy sounded like he was in the car with me. We talked for 10 minutes or more. No extra power was needed.

Me, I am leery of being around multi-thousand watt transmitters, but , legalities aside, I have to hand it to the keydown boys who put such huge amps in their vehicles. That just isn't my game.

Hey Toll Howdy!,
Yeah, he's a troll, just look. He's wouldn't say
a word here, he would just take notes and turn
people in to the FCC if it meant so much to
him. Anyway, it's not his real name anyway.
Take care, might get down your
way sometime this spring or early summer.

Custom made 8 pill for sale. Like new! Only keyed for testing! This box was
built by Duster in Jersey. When volted @ 18V........ 2500+ out!
Built into a TNT 1KW box with custom board and fans. Looks completely stock!
This box was built for a friend who decided on a 16 Pill while getting the
van set up for it. New box is already in so this one has to go.
$700.00 plus actual shipping from 07***.
E-mail me with any questions.
cbmods@optonline.com

Yep. In a post a few months ago, Twistedhed claimed he has hung a
used jockstrap above the fireplace mantle, and that the "saucer men"
talk to him. He also claims to be a well-published journalist, proudly
admits to beating his dogs, thinks it's legal to shoot and kill anyone
that steps on his land, and will gladly give you instructions on how
to steal some real-estate for yourself. You figure it out.

Probably because of the size and location of the country -- international
comm (oops, that should be "shootouts") can't be avoided even with low

power.

2547. Fw: The Number Eleven . . .

Newsgroup: rec.radio.cb
Date: 2001-10-23 05:03:47 UTC
From: "Scott (WMC-69)" <upplus@hotmail.nospam.com>
Message-ID: <3BD4FA20.444AB935@hotmail.nospam.com>
Source record: 101560

Subject: The Number Eleven . . .
(another cut and paste)

This was just sent to me by my good friend, and fellow cynic Thomas A., and its brilliant.

AND - that's the reason I'm sendin' it to y'all

Kaz

Editors Note: Surely by now you have all seen the E-Mails regarding the number 11 and the tragedy of September 11th..
If you have not - the original is printed below.
If you know the E' I am referring to, scroll down to the reply by one "David Pawson"

Original Letter:

The date of the attack: 9/11 - 9 + 1 + 1 = 11
September 11th is the 254th day of the year: 2 + 5 + 4 = 11
After September 11th there are 111 days left to the end of the year.
119 is the area code to Iraq/Iran. 1 + 1 + 9 = 11
Twin Towers - standing side by side, looks like the number 11
The first plane to hit the towers was Flight 11
I Have More.......
State of New York - The 11th State added to the Union
New York City - 11 Letters
Afghanistan - 11 Letters
The Pentagon - 11 Letters
Ramzi Yousef - 11 Letters (convicted or orchestrating the attack at the WTC in 1993)
Flight 11 - 92 on board - 9 + 2 = 11
Flight 77 - 65 on board - 6 + 5 = 11

Dave's response:

Oh my God! How worried should I be? There are 11 letters in the name
"David Pawson!" I'm going into hiding NOW. See you in a few weeks.

Wait a sec ... just realized "YOU CAN'T HIDE" also has 11 letters!
What am I gonna do? Help me!!! The terrorists are after me! ME! I can't believe it!

Oh crap, there must be someplace on the planet Earth I could hide! But no ..."PLANET EARTH" has 11 letters, too!

Maybe Nostradamus can help me. But dare I trust him? There are 11 letters in "NOSTRADAMUS."

I know, the Red Cross can help. No they can't... 11 letters in "THE RED CROSS," can't trust them.

I would rely on self defense, but "SELF DEFENSE" has 11 letters in it, too! Can someone help?

Anyone? If so, send me email. No, don't... "SEND ME EMAIL" has 11 letters....

Will this never end? I'm going insane! "GOING INSANE???" Eleven letters!!

Noooooooooooo!!!!!! I guess I'll die alone, even though "I'LL DIE ALONE" has 11 letters.....

Oh my God, I just realized that America is doomed! Our Independence Day is July 4th ... 7/4 ...
7+4=11!

~Dave

PS. "IT'S BULLSHIT" has 11 letters also.

That's what it's there for. It's a simple system, if you want to talk
about apples you do it on the newsgroup for apples, not oranges. Why
is this so hard for people to understand? I remember an old Sesame
Street song, "Which one of these things is not like the other..."

Keydown are not about pure power. if it was about pure power they would go to a lab and drive the boxes with the same radio into a dummy load and award the box that put out the most watts the winner. it is about the set up alot of keys have been won by boxes that put out less power. but there antenna system was better. skip has nothing to do with keydowns the station doing the judging is only 30 miles or less away

See Aaron you putz is it about mobil antennas every year antenna systems get better and better since you are a technical know it all you put to gether a mobil set up with a legal 4 watt radio and i will do the same and we will key to a base about 4-6 miles away and you will find out how much key offs improve legal CBing then i will put my am ham radio in all legal like yes i am a ham op and we will see how far you can talk then i will see how far i can talk then when i win you will bow down to me and call me a CB god if you win i will let you break up all my illegal CB amps or do with them as you please

Maco actually calls it a Commercial Antenna. They can still be made of
aluminum,
rather than the shoddier fiberglass antennas.

lol.

You wouldn't run away when proven wrong, would you?

Honestly, I expected more from you Bill. You didn't even try to defend
yourself this time.

At least admit when your wrong. People will respect you more for it (Feel
like I gave this
same thing to Voobner a day or so ago).

Anyway, nice withdrawl.

It relates to the original question posted. Something you NEVER relate to.

>
> >A company in Florida also makes one (currently). However, it doesn't
> >support 10 meters AT ALL.
>
> Does that dismay you because you want to see it used illegally on 11
meters?

No, actually I don't. I think it is a somewhat inferior product.

I just found it a bit funny that NOBODY is allowed to use it on 10 meters...
Licensed or not.

>
> >Even if you ship it back for repair, and PROVE you ahve a \
> >license enabling you to use full power on 10, they remove it
> >upon shipping it back.

> Someone not trusting them I mean. Does that happen a lot? :)

Again, Aaron COMPLETELY misses the point. "and PROVE you ahve a \
> >license enabling you to use full power on 10" was the key statement that
Aaron seemingly IGNORES, since it doesn't fit his anti CB message.

Oh well, chalk another one up for idiocy in the public school system.

1. Shield
2. White Audio
3. Black Recieve
4. Blue (switching common, ground, etc)
5. Red TX

You can also strap pins 4 and 1 together. This sometimes eliminates squeal problems prevelant in improperly installed systems (and vice versa, if you get loud squeals, try NOT connecting them together. Depends on the type of interferience as to what will work).

Hope this helps!

Give me an example. Like "I'm thinkin bout buyin one o' them there
Kenwood base radios"? Or maybe "Im runnin a base here on 20 meters"?
Or perhaps "I hear a base callin ya on CW, there Fred"? LOL.

> What does that have to do with it? Some people call it a
> Shack, some people call it a Radio Room, some people call it a Station in
> both hobbies. Big deal.

You guys are off and running in the wrong direction. Who ever said the
Antron wasn't a "base" antenna? The point is a guy advertising a HAM
setup (in a CB newsgroup) makes a point of saying that the antenna
would cover 11 meters.

When I say newer, I mean something designed in the last 10 or so years.

About the early 90s, they started to experiment with SMD devices, cheaper designs, etc.

Actually, no, you where not. You had that rat looking Camaro / TA /
whatever it was, and had to put that 32 pill in your friends ride because
you had no alternators mounted / room.

Yet another lie. Buyer beware. People who lie about what they own will
also lie about condition of equipment, etc.

Ahh yes. But you see, nobody was talking about SSB mode until you
brought it up. We where talking about keydowns, and the amplifiers
we use in them, and the antenna systems. With keydowns, you use
AM, and AM only. I would prefer to use FM, since their is no
heterodyne, etc., and the capture effect of FM would REALLY prove
who won the event. However, FM doesn't have the "loud scratchy" AM
quality, and the people won't use it.

Gets rid of the cheaters, so they don't want it.

> The second you stop talking, even if your transmitter is still on, he
> can be heard regardless.
>

Nobody runs SSB in keydowns, so you are bringing up apples and oranges.

> Furthermore, the propagation path from your location to the receiving
> station may not be as good as the path from his location to the

You pull up on a line, seperated by about 25 feet. How much different can
the propogation be?

If I'm on the east coast and in the greyline along
> with a station on the east coast of, say, Australia, and you're in the
> midwest...the greyline enhancement on my signal at the receiving
> station might be the difference that allows me to (as we used to say
> on the CB band back in the 70's) "walk the dog" so to speak.

Blah blah blah. He is talking about something irrelevant. We where talking
about mobile to mobile competition, in a controlled environment.

>
> >Typical argumentative "I am holier than you, and my antenna system will
whip
> >your linear's butt".

> watts on AM, and if I key up with a "measly" 100 watts P.E.P. on USB,
> my signal will ride your carrier right to the receiving station.

Actually, not if I am modulating my carrier. And at 100 watts, you won't do
that. Experiemented with it, tried it, and it doesn't work.

The sideband noise is so large on those massive multi-amplifier setups that
you easily
see 4 or 500 watts of BS alongside the carrier when viewed on a spectrum
analyzer.

Besides, again, we aren't talking about SSB. We where talking about a
controlled
environment shootout.

I
> will be heard. Get a shortwave receiver and park it on 10 MHz at night
> and eventually you'll hear the proof of this concept in the
> Spanish-speaking sideband stations riding WWV's 10kW AM carrier across
> most of North America.

That has more to do with propogation of different regions of the earth, than
it does
with real world applications with CB shootouts, which is what this
conversation was
about until you attempted to change it.

I understand what you are talking about, and have used it to my advantage at
times.
However, your off topic. Which basically invalidates your argument.

> with everyone else on the band for 500 khz on either side of you.

I totally agree. FM is best for shootout, since the capture effect will
ONLY
let the strongest station be heard. SSB is best for long range comms (that
the average person has access to.. Spread Spectrum is even better, but
how many of us have a nice Harris sitting in the shack)?

However, the conversation we where having, that you interjected into, was about CB amplifiers and competition with them. Not about what was the best way to talk.

Have a good one bud.

Power doesn't equal splatter. I can kick a speech processor on, and
effectively
get another 3dB, which would be an S unit, with louder modulation, which,
in effect, puts you down in the dirt.

Not typical CB mentality. Its laws of physics here. Please see my other
post
regarding how the shootout competition is held before you begin to tell me I
am
wrong.

lol

CQWW proves you wrong. And also puts the amateur community in the
same ballpark as the CB radio crowd. Take a look at the amps reflector,
and the people bitching about people taking up too much bw, as well as
when they are questioned about it, they actually ADMIT to splattering
to keep the frequency to themselves.

Hams are no better than CBers when it comes to competition. It's called
human nature, and no license will take the human element out of it.

Actually, on the keydown line, all else is about equal.

It comes down to a fight about who has the largest PEP output, and the most efficient antennas.

Hams argue it is ALL about antennas. CBers argue its all about power.

I argue its all about who spent the most fucking money. :)

So did I. My first radio competition was CQWW single / single.

Then I discovered the CB radio competition scene. Now I enjoy both.

I didn't realize that radio
> was invented and developed for 'shootouts'. With that in mind, the FCC
> and the ARRL need to rethink the rules of the game.

Yes, they do. All those stupid fucking contests that destroy the 80-10
meter
spectrum should be made illegal. Gee, I can get a **5***, your 5/9. QSL
via bureau.

Seems I hear a lot of the same on 11 meters. Guess their isn't ANYTHING
that seperates our
testosterone from yours, is their?

All those QRP rigs

Doubtful
We run better or equal antennas as you do.
So, yes, power IS the deciding factor, when running a stacked set of
mono-band 7 element antennas.
Does that come in a mag-mount model?
No, that would be on the base station.
On the mobile, it isn't uncommon to find people running 3, 4, 5 even 6
element mobile antennas at a keydown.
Power IS the deciding factor.
I don't think so, toll.
So, with equal antennas, you believe the guy with a lower power output
from his transmitter or amplifier will have a greater chance of being
heard than someone with twice the output power?
Please explain that.
You, like many of the other misguided souls in
this newsgroup, have misconstrued the meaning of the word
"communication".
We are not talking about comms, we are talking about a shootout
competition.
Listen during CQWW and you will find the same things on the amateur
bands.
Besides, you can throw anything into an argument, and if it is off
topic, you will
find that you can argue any point.
It's not about 'power'; it's about control, cooperation, and courtesy.
With nothing more than a stock CB, I can communicate with anyone
anywhere on the planet.
And with my 2Kw amplifier, I can do so more often, with more
reliability.
If that WASN'T the case, you wouldn't find the proliferation of
amplifier manufacturers
in the commercial and amateur arena, would you? I mean, after all,
everyone wants to spend
money on unecessary items? Don't you?
    I can also win a keydown against the biggest amp you can
find. It's easy. All you have to do is know how to communicate.
lol.

Your going to win against a mobile to mobile competition using a
barefoot radio against someone
with a 80Kw output? All else being equal?
extranneous BS snipped in the interest of brevity.
Toll_Free
The Man your Mommy calls Daddy
Thanks for clearing that up -- I always thought that the whole purpose of radio communications was communications. I didn't realize that radio was invented and developed for 'shootouts'. With that in mind, the FCC and the ARRL need to rethink the rules of the game. All those QRP rigs are for people that don't have a life, I guess. And what's the point of using a microphone? Just make a big switch, the bigger the better (which seems to be the mentality of radio engineering these days, huh?)

BTW, my mommy has been dead for quite a while, so I guess that makes you a necrophiliac.

"Nah....Lmangang claimed that tag. Ask N8."

No thanks, I'm looking for something closer to an early model Bronco or
old Dodge power-wagon.

A PC-68 or 78, and a 4 1/2 Francis antenna, or an HQ-27 Hustler (no wilson drugs needed). I've done dump trucks for years. a 108" whip on the front bumper I have seen too.

No, I guess the racism, sexualism, etc. that took place on 75 meters
never happened, did it?

Denial is the worst form of vanity. I agree that CB needs to be cleaned up,
but I don't agree with a bunch of hams attacking CBers when they try
to run clean power, NOR do I agree with amateur operators coming
to rec.radio.cb telling us how fucked up this radio service is, when their
own is coming under scrutiny for the same.

You think the ratio of bad apples to good isn't about the same? How many
ACTIVE
licensed amateurs are on the air? How many CBers?

This would actually be fun to look into, as I KNOW the amount of hams is dwindling.

Take a look at the big 3 ham mags. All they can talk about is how it is a dying hobby.
Sad but true.

CB is growing more and more. Which yes, means you get more idiots.

I also lived in SoCal, and had to fire up the 8877 2 meter box sometimes just to make it
into the repeater. So yes, the ARS also has its problems.

>
>
> > Hence the problem with ARS

lo.,. Hollingsworth has made a career out of it. I suggest you get your facts straight, and get the hell out of lala land.

>
>
> > Hence the problem with ARS
> > operators building illegal output
> > amps.
>
>
> Extremely rare for both radio services.

Bullshit. Take a look at the people on the amps reflector. Most of them talk
of buildling, repairing, and selling "tetrode with handles" amplifiers.

I personally know of 3 in use on the amateur bands here in a 100 mile radius.

My 4CX5KA7 box does 80-10.

Hams rarely operate illegal
> power amplifiers, while most CB'ers (99%) would not even know how to
> build an amplifier.

Oh yes, and the ARS hasn't become a bunch of appliance operators, have they?

Hell, most amp manufacturers offer no-tune tube amps now, just because they got tired of people having tubes sent back, destroyed, because they didn't know the proper way to tune and load, and stripped the grid coating from mistuning.

However, if you compare the USE of illegal power
> amplifiers (including those purchased), this is again extremely rare
> for hams, while commonplace for CB'ers.

Total bullshit. Most people on the amateur radio service run way more power
than is
necessary for comms. 100 watts is what comes out of the rig, thats what
they run.

I know this for a FACT, having WITNESSED it at the peoples stations I
frequent.

No, not all of them are CBers.

>
>

> are now avoiding CB also).

Dwight, give it up. Your preaching to the choir. The ARS is just as hosed
as
the CB community. When you can boast the same amount of users, in the same
amount of spectrum come back and talk.

Otherwise, meet you on 20.

You are a ham. You should
know better.
Yes I am.
I also enjoy high power CB operations.
Well that must suck. You can't say "I enjoy high power CB operation"
when meeting a fellow ham. You can't get on the ham bands and discuss
the joys of high power CB. You can't pick up a copy of QST or CQ and
find tech articles about high power CB operation. Unless you want to be
labeled as one of that creepy minority of hams who intentionally break
FCC laws you have to keep your high power CB "hobby" a secret.
-Aaron-

you know artificial intelligence 'aaron' , as you call yourself.....you
sure worry a lot about ham and cb stuff for a guy who says he doesn't
talk on cb nor is a ham....yep, you are sounding more like leland
everyday, pal........

1 2290 driving 2 2879s, driving 8 2879s driving 5 8877s off a single 300A
leece neville driving a pair of 4CX15000s, with 5 double stator alternators
for power (on the large amp), and 5 3a 7.5kV transformers.

A0 output.

You honestly think that won't do 80 grand carrier power?

Nobody said anything about linear amplification here, either. The tubes are
biased WAY into cutoff (hence the massive overdrive, to overcome the grid
bias).

Had this argument on the ham amps reflector, and they finally admitted it
WAS and IS possible.

You believe so?

The current draw also rises with the increased voltage.

If you have a tube that is rated for 2 amps on the anode, and you are pusing it to draw 3 amps, have you not fed your tube too much current?

Indeed, you have. Proper design would have been to incorporate a transformer that has a core that saturates at the maximum power input to the tube, but that rarely happens.

OX-ee-Dent-al:
Are you saying that Hambos can't be truckers? People can sell WHAT they want WHERE they want to sell it (I know this thought will offend ALL commies out there, but SO WHAT!). I have met MANY FINE HAMS that are Truckers. They ARE Americans. They are not the trashy CHEAPO Hams we have here on MY CB Newsgroup that are so infatuated with promoting communism rather than defending The Republic! LEAVE US pinkos!!!!!
Dave !!!!!!!!!!!!!!!

If you have a problem what diffe4nce does it make how much current your supply has to offer you still have a problem. Any moron knows with a shorted resitance (aka drop in resistance) the will be a bigger current pull. but like a said not every one knows the basics of ohms law.

Sure, and then I'll ask them if they think it's ok for unlicensed twits
to muscle in on their freqs. Hey, after I point this out, they might
just monitor their freqs a bit more closely! Great idea, twist!

A better idea is to apply the same silly logic to their own personal
property,

"The only silly logic is your own. The freqs in question are NOT your
personal property, including ones that may be in use."

like a fishing boat for example. Since they seem to make little to no
use of it during the week it should be just fine to let any yahoo jump
in it and take it out for a ride. After all they weren't using it all
the time, or even most of the time, while letting it sit there unused is
a waste

"You profess to speak for those which you know nothing of, once again.
You are the only individual I have come across that claims the freqs
sitting there are a waste. We put them to good use."

thus somebody else taking it out for a joy ride isn't going to hurt
them. Of course if by some chance they do show up to use it, and find
some other unknown, and unauthorized yahoo, using their boat, well
they'll just have to cool their heels until the boat comes back, or go
find another one to use. Fair is fair. Just make sure they leave plenty
of gas in the tanks.
If you haven't notice all of those arguments about frequencies being
unused etc. and thus OK to hi-jack

"Your comedic terms serve only to showcase your personal lack of
knowledge concerning the act in question and it's legal status."

they believe because they are the ones taking the property, or the use
of a limited resource, away from the rightful owner or user.

"Well, it's this way, when the freq is abandoned, the "owner", however
inappropriate that term may be, has demonstrated his or her complete and
unequivocal value of said "property," yet another misapplied term. It
was, for lack of your comprehension for a better analogy or definition,
discarded by that party. If you must use poor analogy choices when
comparing that of which you know little of, it would help to at least
have a remote idea what your subject is about, and hey, one man gathers
what another man spills...it would seem your anger over this obvious
sore spot, may be better directed to those that a frequency is assigned

to but fail to use it, and to the feds for allowing them to become dormant and inactive, except for skip in that certain, DX rich area."

appliedWhen the situation gets turned around, and they find themselves being the wronged party, their tone and argument changes radically. Finally none of these guys have never mentioned, or documented, a court case involving the FCC, where the tired old argument (about using so-called unused frequencies doesn't hurt anybody, thus OK to use) has ever saved anyone from being found guilty in an administrative court of law for violating FCC rules.

"That's because no one is ever busted for simply talking skip."

Instead the pirates leave the court room with a fat fine to pay while their gear ends up in a car crusher somewhere so it never gets back out there to be used illegally again.

"Yea, yea. Just another piece of your fluff."

toll i believe we been through this last year. why bohter again.

I agree that rasing the voltage will increase wattage. knowing I * R^2 and R staying stable of course that means I must have went up but if you had 1000 amps extra if will not draw 1000 amps so try again....

Unless we ham exceed the upper power limit (typically 1KW) we
can legally build linear output amps for use on most ham
bands. Even 10 meters if we build one for our own personal
use.

Why mess with illegal 11 meter CB stuff if you have a ham license,
Toll Free?

You must have had a bad antenna system, operating 147.435MHz
or doing DX. Yes, 147.435 has been a real problem for ham
radio, but Riley is on it now. Most of us hams behave ourselves.

Good for FM or Morse code, but not AM or SSB. And you better
have a good harmonic filter on the output of that setup!

Toll,
It was because the hams themselves requested it. ARRL and individual hams had become disgusted with the junk that was being carried on and pressured FCC to do something about it.
It was at this time that Mr. Hollingsworth was promoted to Legal Counsel for the Enforcement
Bureau. At the same time, there was another storm brewing out in Wisconsin and in Michigan
from consumers being swamped/receivers paralyzed by illegal CB stations. No need to rehash
the results of that. Anyway, a few out of the larger number of hams were creating much adverse
attention in the international community, so ARS was hit first. Rest assured, it won't stop with
ARS. No need to argue over that, either. Que sera, sera.

The GOES weather satellites have one transponder channel called SAR
(Search And Rescue). I don't know the details but it has an uplink of
400 and_something MHz with a down link of 1.5 and-something GHz. If
the right digitally modulated signal appears in the channel alarms are
supposed to go off somewhere. (I helped build the automated RF test
equipment for the GOES prime contractor---Hughes satellite, now part
of Boeing. Check our web site at www.aeroflexlintek.com) Perhaps
this is what they were talking about, if so it would be available
world wide and, as I recall, it is for land, air, and marine use. I
know nothing about what the ground equipment is like.

Some satellites carry receivers for the older 121.5 MHz (civilian) and
243.0 MHz (military) aircraft emergency frequencies. I remember
reading about one time that the Soviets called up Canada and said
there was an aircraft down at such-and-such a location. Sure enough,
the Canadians went and looked and there was. Aircraft HTs are
available, and I have even seen advertisements for wristwatches with
121.5 MHz beacons in them, but I think you would have to be a pilot to
use one. The FAA would probably get a little grumpy if someone else

tried to use one.

Jim
N8EE
(also private pilot)

Toll,

Me fears ya just said a mouthful. I admit I run into them all the time. Like the time I retubed and
cleaned up a Swan 700CX and took it to a hamfest. The rig was perfect in every way, and the
night before, I talked all over the place on 75. Next day at hamfest, I quickly found a customer.
Rig had book, all instructions. About an hour later, the two guys that bought it came back saying
the radio was bad! Yeah right. The stupes didn't know anything about tuning and loading a
tube rig and burned out a new pair of 8950s @ 90 bucks per pair. Yes, I gave them their money
back, but not before taking off the cover and showing them what they had done. I told 'em I
KNEW damned well that radio was fine, and I showed them the burned out tubes AND the
instruction book--which they never bothered to open. I pointed my finger in one of the guys'
faces and said, "DON'T YOU EVER COME BACK TO ME FOR ANYTHING AGAIN"!
I mean, if you can't tune and load a rig, ya gots no business with it, right?

I know I don't know everything to know, but that's the thing that attracts me to ARS--I'm still
learning. And I can build a mean mobile HF antenna. LOL!

Well as I explained to you some posts back, 2 months. A couple usaully
means 2. I have just been reading and trying to understand the tactics
of the so called "AKC" and as you like to call them key clowns.
While I do have a foot warmer of 100 watts in my CJ5, it is only
there in case of an emergency when off roading. Otherwise in my
work truck I have an old 146 cobra with the cobra power mic, running
through a wilson 500 magnet mount. So if you want to call me illegal,
please feel free, but I have never had to use it, but it is reassuring
to know that it is there if I need it.

i got 112 DXCC's worked and confirmed on 11 meters with just 100 watts and a antron99 about 12 feet high during the end of the last cycle and when the solar low came around i enjoyed every minute of it talking to the locals up to 150+ miles out. see we have the best of both worlds. in the day during the solar high its the best dx band bar none and at night we have a semivhf band to enjoy as well and since we all have big amps and hi gain antennas we take full advantage of both.

Don't mind at all.

I do not know all about the politics behind some of the rules, that's Dicks area of expertise (or one of them). I concern myself more with technical reasons, politics often seems to do nothing more than to get in the way of logic.

Brainbuster.

Sorry if the CB newsgroup is "stirred up" when anyone mentions those pesky legal issues, but you know as well as I do Jerry that if these guys weren't fighting about the legality of their "mauls" and "exports" with me they would be fighting amongst themselves. So the "let's not stir up anger" rationale is lame and sounds like an excuse for why certain people want the CB group back to the WAY IT WAS.....e.g. a few "techs" holding court with their competition buddies along with a few hams who enjoyed playing CB professor.

Hey Tim, how come you are on 20 meters every single day? This lends a lot of credence to what Leland says - that you are likely bootlegging on ham bands. Since you can't really have a conversation there my guess is that you look around for a "zoo" frequency to play on.

Hope they nail ya.

"Hm. 10 "& 11" meter "base" antenna? Why would the 11 meter capability
be important to mention in this ad? What ham calls a fixed station a
"base" anyway?"

Taken from one of Aaron's earlier posts. He inferred that anyone that was
an amateur
operator wouldn't call their equipment a "base station", and therefore, the
"base antenna"
wouldn't be used by anyone but CBers.

The point is a guy advertising a HAM
> setup (in a CB newsgroup) makes a point of saying that the antenna

> would cover 11 meters.

Yeah, like maybe someone in this newsgroup would be interested in an
antenna covering 11 meters, huh Aaron.

Your a troll, and have no recourse other than to cower when people prove you
wrong. Something that happens more and more often since I came back, since
most of the people you picked on didn't have the technical expertise to back
up
their claims.

So far, every time I back you into a corner, you ignore the post.

Your a loser Aaron.. And not even a gracious one.

Did a little DX, that is, until the TR9230 2mtr all mode was stolen (along
with the car it was installed in) :(

>Yes, 147.435 has been a real problem for ham
> radio, but Riley is on it now. Most of us hams behave ourselves.
>

Agreed. And most SERIOUS CB operators do the same.

Its the same on all fronts. Every group has its bad apples. However since
their is a ratio of 5 to 1 (I am guessing, but
would actually believe in practice, that ratio is low) CBers to licensed
hams, we have 5 times the idiots that
you guys have on your bands.

5 times is a lot. Makes us look bad. That doesn't mean that every CBer is
a bad apple, runs fiendish amounts of
DIRTY power, or talks bad about everyones girlfriends / wives, either.

lol.

I have a mint Pal 201BDX sitting on my bench now that I am not willing to give back to the
original owner, because I just put 200 dollars worth of 8950s in it.

Has the 15 meter coil as well. Its a kick ASS amplifier. I doubt the owner will ever
see it again, though. He has went through a couple sets of used tubes (testing 90 percent
or better on the Sencore), and said it was the tubes.

So, when he comes up with the cash for 6 8950s, he can have it :)

Depending on the band, from 200 to 1500 PEP output, +/- 10 percent.

we
> can legally build linear output amps for use on most ham
> bands. Even 10 meters if we build one for our own personal
> use.

Agreed.

>
> Why mess with illegal 11 meter CB stuff if you have a ham license,
> Toll Free?

I mess with whatever I like to do. I enjoy some of my friends that I have
met on this newsgroup and talking with them on the freeband. They have
no interest in becoming licensed hams (because of posts like yours that I am
responding to right now... But don't take offense. Some people get turned
off by that attitude), but enjoy the hell out of radio.

And with the prices the way they where on multiband HF equipment, I don't
blame some of them for sticking with their 125 dollar modified 148s. Not
all of us can afford a 781A, ya know? Prices are getting better, but this "
HF Radio on a Chip" thing is going to bite us in the ass already. Hams
are now looking to get RID of the DSP and go back to mechanical filters.

Oh well, I enjoy both services, and will continue to operate both. I will
also continue to promote people to use power properly in WHATEVER
SERVICE THEY WANT TO, even if it means they are illegal.

To each his own. But your point is taken, and was made almost 10 years
ago when I got my ticket.

It will if you have a glitch in your antenna system, as well as in your amp.

Also, the tube may be rated for 4 amps continuous on its anode.

If I pull 5 amps of input, I am doing exactly as Tim said, aren't I?

I wasn't talking about spectral purity. And I agree.

However, my point is, that it DOES happen.

You are such an eloquent writer!

Sooo, just because YOU don't like the contests, that means it should be ILLEGAL???

There are sooo many other places that a person could go to have a QSO. Have you tried 2m SSB?

Perhaps the reason that the bands are so crowded during a contest is that there are a lot of hams ACTUALLY OPERATING AND ENJOYING THE CONTEST???? Why not try it instead of complaining??

I personally don't like traffic nets, but I don't want to make them illegal!

Contesters do a lot for the hobby.... coming up with new communications methods (i.e. PacketCluster), finely honing their operating skills and stations, trying out new antennas and radios. The big thing with some of the contesters I know is running QRP and Fox hunting. It is not so much how much power, but how efficient your operating skills are. And of course every contest I know has Mid-power and low power categories. But again this requires more skill.

I don't expect everyone to like contesting. At least I respect the other person to be able to like this thing they like to do.

I like contests, not because I try to compete for the high score, but it
provides a steady supply of quick contacts when I'm trying out an
antenna or rig. Also, the "WARC" bands (10MHz, 18MHz and
24MHz) usually do not have contest activity when the more traditional
HF bands are hopping with contesters.

I have found HF to be a lot of fun since I got my Extra Lite :-)
Been mostly SSB, but there's a code key around here somewheres...

Your right, if you want an apple go to the apple tree, if you want an
orange go to the orange tree. But if you want both why not go to the
supermarket, they will carry both and a lot more. So think of this
group as a supermarket.

Does anyone know the trick to re-coaxing a Mag-mount base load K40? After removing the set screw for vert. polarization adustments, it does not want to come apart any further. Not wanting to damage any discrete components that may be inside, are these bases even serviceable? I'd appreciate any tips or tricks to these if they are even worth it. If they are not serviceable, I appreciate your time, and I'm ordering a Wilson 5000.

I wouldn't know.

Maybe because their are a lot of amateur operators that also frequent this newsgroup.

Maybe the gentleman selling it didn't also cross-post because of sniveling little whiners like you in the other newsgroups that would give him a pile of shit for doing so.

Why the hell don't you ask him, instead of asking me you idiot.

Source record: 101812

Hello Mike:

Yes you can take the base of the K40 apart.

I just can't remember right off the top of my head. I believe there is a C clip that must be removed to allow access, possibility just underneath the main connection piece.

There is a 130 pF disk capacitor in there, that should be replaced with a dipped Silver Mica Capacitor. The new capacitor should be held in place with with a dab if Silicon RTV. Many of the K40 antennas go bad because this capacitor gets burned up or vibrates its leads loose or broke off.

Be careful, there isn't alot of room in there, but just enough to fit it all in there.

The cheap shit coax should be replaced with RG142B, use the same length, it has a solid spring steel center conductor that is silver plated, with a Teflon dielectric. The outer shield is a double braid of silver plated shield. It is very easy to solder, on a nice new Silver plated PL-259 connector.

The RG142B goes for around $1.25 a foot, but will be there and ready to use in the next 50 years.

I just took apart a Wilson 5000, and replace its cheap shit coax with the premium RG-142B coax. The Wilson 5000 does not use a capacitor, which is a good deal. I also installed Silicon RTV sealant between the SO-239 soldered center connection to the coax, and its metal base, that has approx. gap of 1/2 inch. Yeah right they rate these antennas at 5KW, in there dreams. Not without that gap being filled with RTV, and that cheap shit coax being replaced. And even then I would want my lead lined helmet and goggles on.

The new capacitor can be bought from http://www.rfparts.com

And the RG-142B coax, and silver plated Teflon dielectric PL-259 connectors can be bought from http://www.cablexperts.com/

Any magnetic mount antennas, that have to have the coax routed from outside to the inside of a vehicle, will not last with a car door continuously being closed on it.

Tell em Jay sent ya, and they'll water down yer drinks, and charge ya double!

Jay in the Great Mojave Desert, ... just down the road ah ways from the
fillin station.

They most certainly are if the person or corporation paid for them Twisted. That's why the FCC has those frequency auctions.

On another note, as I mentioned to Sparky, I have yet to see one single documented case where any of the arguments, from your side of the fence Twisted, has resulted in a case being dismissed against a person(s) whom the FCC charged with violating Part 95 rules. There are plenty of examples of people being charged, and found guilty, some of which have been posted to this group in the past. Now, if those same arguments were not "silly" then there has to be examples in the public court records to prove it, i.e. the administrative law judge is on record agreeing with the reasoning offered, and based his decision to dismiss the case on his belief that the argument is valid. To date not one has ever been provided by you nor anyone else with views similar to yours. And that is the bottom line. Does the logic stand up in a court of law or does it not. If it does then where are the cases to prove it?

Exactly the opposite. I'll give the prize anyday to the guy who built
a single-frequency QRP CW rig from junk parts, unwound an old
alternator to make a longwire tuned perfectly for that exact
frequency, and worked the world for $0.

That is changing as you write because the nature of the problem is changing as well. With the increasing use of so-called 'export radios', and PLL modified CB rigs, Hams are increasingly discovering CB communications taking place on the Ham bands. As long as the idea remains that it's OK to transmit where ever the radio can there is going to be problems. Some of the individuals on this news group could care less who they interfere with while on the air doing their thing. I a frequency does not seem to me immediately in use they simply steal the use of that frequency and thus denies the rightful party's ability to use their own frequency, in the manner the need, and at any time they choose to use it.

So the 11m problem is like a weed, it's necessary to pull it out by the roots to get rid of it. In the case of 11m the appears to involve getting enforcement action taken on rule violations, and point out to others lurking on the side that activity is being monitored. The really sad part is the whole mess could be cleaned up by CBers themselves, however there is general lack of interest to do it, and there is a group who is VERY interested that it stays a mess. So once the garbage starts spilling over the line, for others to content with, there is no reason to stop at the dividing line, but may as well continue all the way to the source to ensure the problem does not come back too soon if ever.

As probably the senior graybeard, in license time if not age (57), you are close but not entirely correct. Lets take it in levels and issues.

There is a tendency among newer amateurs, and this predates CB, to bronze Part 97 and worship it like a golden bullock. We have some who seem to take the same viewpoint toward Part 95 as some take to the King James Bible. I once had an FCC engineer visiting a broadcast installation I happened to be associated with at the time that he had never encountered a bunch of seabag lawyers like the local VHF denizens. Having broken a few rules myself and seen a few rebels without a clue mature into useful citizens -- age does tend to change one's outlook -- it is really hard to get too wired about things in general. And the fact is that most hobbyists will last about 5 to seven years and buy seven rigs before it pales. The gung-ho find themselves retraining the troops every time they break for lunch; I am simply too old for endless tasks.

Power is generally run by the terminally incompetant or terminally stupid so aside from getting a few chuckles out of the incredible crap that passes for amps, the running of power is not a big issue.

One group's operating practices are no sillier than any other group's and keydowns are no sillier than contesting so it's a horse apiece. Hobby electronics has a multitude of facets that are not going to appeal to everyone. I for one always thought that packet and 220 MHz (yes I know it is now 222) were about as close to playing with oneself as I cared to get. Number collectors give me gas but giving them the total of your SS#, phone number, and drivers' license number usually made that point (particularly a Wisconsin D/L that encodes everything but the national debt). But the occasional 10-4 doesn't disturb me much; in fact several of us newly minted 1x2s would regularly do it on the 2 meter commute to irritate the terminally anal. As I did the repeater building and maintenance at the time, we were going to do whatever did not get the license revoked.

Freebanding is another issue and it is one where I will admit to a little fear and trepedation. I will personally draw a distinction between the 405-27.9999 area that was once ready to be made CB anyway and was not because of a technical stupidity and other freebanding. It is not just CB: Marine users are becoming pirates on a regular basis as the search for the private, quiet, or company channel continues. The village idiot can open a PLL and a number do without any realization of the possible consequences and with complete indifference. When we see a newbie that thinks it is cool to talk to the counter lady at Mac and Don's on his 5kHz swing 2 meter rig when 2 kHz is more normal outside the ham bands we just write him off as a nincompoop. Wandering around the spectrum like a bunch of Iowegians (Iowa: idiots out wandering around) is not in the long-term interests of anyone.

Perhaps finally is the head-case thing which both services have and have had in great numbers. These are people whose aim is not communication but preventing it. We need these people like Custer needed more Indians; one of the great motivators for continuing the CW testing is quite honestly to filter them out of the ham bands. It obviously has not worked 100% but there is an argument for it keeping at least the worst riffraff on 27 MHz. It is not an argument I happen to buy but I can see the thinking.

Do I monitor 11, No. Do I care, not particularly but only because I can't help the situation where it needs it. But I can tend my little garden and make it bloom.

Dick NBK

Try to please everyone, and you'll please no one. I, for one, care nothing about pleasing people who endorse criminal behavior that endangers the life and/or safety of others.

Besides, complaining about whether a post is on top or bottom is pretty lame.

Anyone have the plastic insert for teh Grant Export or Jackson Export?

Goes over the pushbuttons, smoked plastic with lettering on it?

Mine fell off in a move, and was never found.

Hoping someone might have a dead grant / jackson or parts radio they might be willing to part with this for.

Thanks!

lol

Judging by the number of amateur "appliances" sold every year, I doubt that
is the masses.

And last time I looked, not too many of the amateur contesters using that
type of equipment.

Next troll, please.

Have
> you tried 2m SSB?

Yes, please see other post describing my 2 meter station. TR9230 with 8877
homebrew amp.

Had a small mirage Class AB brick to drive the 8877 with, due to 10 watt
output of Kenwood, though.

It was thoroughly enjoyable. As is my CB DXing, and amateur radio DXing.

I can, and do, enjoy both services.

>
> Perhaps the reason that the bands are so crowded during a contest is that

Of course. Same with the CB shootout contests. They judge the power levels
by
the amount of transistors in the final output amplifier, or the number of
alternators
in the AC output categories.

>
> I don't expect everyone to like contesting. At least I respect the other

Depending on the amount of QRM, either, both, or neither.

It was a licensed, ACTIVE amatuer that taught me how to build tetrodes with handles.

I will be forever in debt to him, as well as his 35 Kilowatt 4CX15000 station.

Because the ham bands are infinitely more important than the cb
garbage band and hams had been requesting the FCC to do something
about the bad apples in ham radio for some time. They do not want
ham radio to become anything like the sewer pit of
miscommunications the children's band is, so Hollingsworth was
appointed to clean it up. When he gets done there, cb is next.

No, LEARN HOW TO READ, AND COMPREHEND WHAT THINE EYEBALLS ARE SENDING TO THINE BRAIN.

If you pull too much input, for excessive output, then you are exceeding the current capabilities of the tube, according to Eimac, Svetlana, et al.

That is what Tim said.

You jumped in and said that was wrong.

Please tell me how pushing a tube harder than its recommended specs isn't exceeding current capabilities?

The world is waiting Prozac.

"Exports" are illegal to use and sell.

-Aaron-
ï¿½
FCC ISSUES REMINDER ABOUT HF TRANSCEIVERS
ï¿½
The FCC has issued a friendly reminder about those HF transceivers
ostensibly marketed for "amateur" use, but actually designed and
intended specifically for the so-called "freeband" radio operators,
who operate primarily in the 26 to 28 MHz frequency range.
ï¿½
In a May 13 Public Notice, the FCC points out that it's a violation of
FCC regulations to import or market a transmitter designed or intended
to operate outside the amateur bands unless the equipment has been
issued a grant of equipment authorization for the radio services it's
capable of operating. The FCC says it wanted to clarify its rules on
equipment that's "intended to operate in various radio services in the
high frequency radio spectrum, including '10-meter' Amateur Radio
Service (ARS) equipment." The notice--directed to "manufacturers,
importers, vendors and users of these transceivers"--emphasizes that
transmitters intended for use by FCC-authorized radio services except
the Amateur Radio Service must be type-accepted.
ï¿½
In the words of the Public Notice: "The Commission considers that the
transceivers discussed above are intended to be operated on
frequencies where the use of type-accepted equipment is required,
because of the simplicity of modifying them to extend their operating
frequency range."
ï¿½
The FCC also noted that it's illegal to import, market or operate a
transmitter that requires a grant of equipment authorization but for
which no grant has been issued, and that it's a violation to transmit
on frequencies allocated to a licensed radio service "without the
appropriate Commission-issued station license." Violators could be
subject to fines or imprisonment as well as equipment seizure and
forfeiture.--FCC

I'm not trying to mock anyone, Toll. That (drunken CB'ers sitting around parking lots) is just a very common type of mobile Cb'er seen around here. You can hear them, and see them as you drive around town, every night of the week (drunk as a skunk and talking trash on the CB).

You're talking about a small minority of hams on a limited set of frequencies, while I'm talking about a widespread problem on the CB frequencies. The two issues are not even in the same ballpark (and one has been reduced even further while the other is still commonplace).

> Denial is the worst form of vanity.
> I agree that CB needs to be cleaned up,

I agree. So why do you insist in endlessly downplaying the problems on the CB frequencies? If the CB radio service wants respect, then it has to clean up the problems first. And that means honest CB'ers (those running legal stations and not causing problems) have to start screaming for enforcement and stop empowering those who do cause the problems (socializing with them, ignoring their illegal activities, etc).

> but I don't agree with a bunch of hams
> attacking CBers when they try to run
> clean power,

Those operators are being "attacked," as you call it, because they are operating illegally. I would just as quickly "attack" a fellow ham, or a member of any other radio service, who was operating illegally.

> NOR do I agree with amateur operators
> coming to rec.radio.cb telling us how
> fucked up this radio service is, when their
> own is coming under scrutiny for the same.

First of all, I didn't come to rec.radio.cb. I'm posting from a ham radio newsgroup to a cross posted thread. Second, as long as I have a CB in my desk drawer (a handheld I use in the truck occasionally), I have just as much right to be in rec.radio.cb as you do. And, finally, the problems in ham radio are not the same as those of CB - the problems associated with the CB radio service are much more severe and much more commonplace. And it is the hams themselves who have

requested the increased enforcement of ham radio, while no such
widespread request has come for CB'ers (including yourself).

> You think the ratio of bad apples to
> good isn't about the same? How many
> ACTIVE licensed amateurs are on the
> air? How many CBers?

Sorry, my friend, but that just doesn't cut it with me. I was a
CB'er for over twenty years (in 6 different states) and now a ham for
almost five. In fact, I suppose you could still call me a CB'er if you
count the very rare use of a handheld while traveling. At one time,
there were more good CB'ers than bad. But that is simply not true
today. The overwhelming majority are operating illegally (out of band,
excessive power, etc) or violating the rules in one way or the other
(foul language, causing fights, and so on). The exact opposite is true
for ham radio - the overwhelming majority operate properly and don't
violate the rules.

> This would actually be fun to look
> into, as I KNOW the amount of hams
> is dwindling.

And how would that compare to the slow decline of CB since it's peak
in the seventies?

> Take a look at the big 3 ham mags.
> All they can talk about is how it is a
> dying hobby. Sad but true.

At least there are hams magazines to talk about. Care to name a
single magazine dedicated solely to CB still in existence? Care to
name one with anywhere near the same number of subscribers? Care to
name one with the same level of technical coverage? Or perhaps we
should talk about books instead? Or perhaps you'd like to show me the
CB radio organization with the scope and influence of the ARRL? If
you're going to use talk in a magazine as proof that a hobby is dead,
then it should be very clear to you that CB was dead a long time ago.

> CB is growing more and more. Which
> yes, means you get more idiots.

Care to provide some proof of that? CB is nothing but a shadow of
what it was in the seventies. And, based on what I've seen, it has
been in slow decline ever since (in spite of the occasional peaks of interest).

> amateur radio service run way more power
> than is necessary for comms. 100 watts
> is what comes out of the rig, thats what
> they run.

Well, the last time I checked, it was legal to run 100 watts on the ham bands. But, regardless, your response avoids the subject of illegal power amplifiers (running more power than necessary is not an illegal power amplifier). So how does your comment about running more power than necessary dispute my comment about the use of illegal power amplifiers in the two radio services? For that matter, I noticed your message avoids responding to most of my comments (the treatment of women, for example).

Both you're not enjoying both services, Toll. You would have to actually be operating within a service to enjoy it - the so called "freeband" is not a radio service, it is a violation of the rules of the CB radio service. So, by your own admission above, you're operating illegally on frequencies outside one service ("freebanding") and who knows what you doing with the other radio service. Are you even licensed to operate in the ham bands? At this point, I sincerely doubt it.

Hello Toll Free: Yes I agree with U.

No dough the lady has a sophisticated taste, and knowledge in acceptable foot warmers.

The 4 and 8 pill amps do all right, but one will need to also run the vehicles Windshield Defroster / Defogger, with winter coming up and all, that will take warm air away from the lady's feet. So for safety reasons a 16 pill amp would be better suited.

Safety is always number One, don't you think!

because youll never again have to replace that 45 dollar tube if its tuned properly into a good load. it is done to make the amp more bullet proof and not
to increase the power output. i own a 4 tuber 811a amp myself that i am getting
ready to retube with 572b's and replace the power supply to allow them to run
full output.

<snip>

I want to clear up something here:

For many years I have been using CB radio to chat with friends around
the neighborhood, communicate on camping trips, get road info for driving
over the passes, and a lot of things that CB radio is good for, and is
perfectly legal. But at least once a day there comes along some idiot
that thinks it's the end-all-beat-all of human existance to jam the band
across the whole town. Several years ago it was annoying, but now they
have these amplifier circle-jerks and it makes the band all but useless
for any kind of decent, regular, legal communications. Even some of the
truckers turn off their radios until they get well past the city limits.

So I found rrcb and lurked for a while. What I had was an awakening to
the attitudes of these 'keyclowns': they have a total disregard for civilized
behavior, a deep-seated aggression against any kind of authority, and
a spoiled contempt for society in general. These attitudes became clear
to me when I began to voice my opinions about illegal ops, then started
receiving flames and threats in my email.

Look Dick, I don't "worship" part 95, or any other laws, like you suggest.
I'm just another guy that likes CB radio, and I like it for what it once
was, and for what it should be, not for the eletronic testosterone bouts
that dominate the band today. I want to see it become a decent band once

again, and I am willing to take actions toward that goal. If that means annoying the hell out of these malcontents, then that's what I will do. Since you have stated that you don't care about the band, then killfile me and stay out of it. I respect your opinions, but don't second-guess mine.

Spark:

Here's the problem... The ones that are doing it in your town aren't necessarily on this newsgroup... so the people you're annoying most likely aren't even the ones who are causing your problem in the first place.

"I don't like what Afghanistan is doing, so I'm going to mess with Iraq just so the Afghani's stop.." Is that about what you're doing?

Uh oh, now you went and done it. You asked twistie to prove something.
Now he will whine for three months trying to divert attention away from
this discussion and never prove a thing.

Why not? It's probably the warmest thing she has now that her hubby's
balls have shrunk from the RF exposure. Now they just have to worry about
the cataracts that will develop in the coming years.

2785. update on the hazer-4

a few weeks ago i took delivery of my hazer-4. i said i would let those of you who were interested know,what i thought of it after installation.well after finally getting off my lazy arse,i finished it yesterday. it was a joy to put together !
about the only tools you need are a pair of pliers and an adjustable wrench. the kit was missing nothing,and assembly took about an hour. the kit is strong,and the hazer moves up and down the tower smoothly.all drillings lined up perfectly,and no additional mods were needed to make this thing work!
the mounting plates for the rotator and support bearing were "precision" ,as there was very little deviation between the rotator and support bearing once the mast was installed. the winch supplied,while being the cheaper "boat winch" type,was none the less very equal to the task of raising and lowering the hazer with reasonable effort. all in all,im very pleased with this unit!!! thank god my days of tilting over towers are over!!!! if youve been putting off buying one of these because you werent sure about it....wait no longer. im wondering why i waited so long!!!

good luck,good dx-ing!!
